future time. About 1,000' west of the Pewabic bed is the Hancock amygdaloid, which is narrow, but fairly mineralized, and yielded an average of 21 lbs. fine copper, per ton of rock stamped, when worked in the old Hancock mine, which is materially above the present average return from the old Pewabic lode.

The Quincy has been troubled greatly by air-blasts, these being violent disturbances brought about by the settling of superincumbent rock in the scores of miles of worked-out openings, causing violent compression of the air elsewhere throughout the mine, giving considerable trouble and occasional loss of life. The most serious disturbances from air-blasts, which practically are artificial earthquakes, of local scope, felt for only a few miles distance upon surface, were experienced in February, 1906, and there seems reason to fear that these troubles will prove intermittently continuous for the balance of the mine's history, but there was less trouble from air-blasts during 1908 than for several years previously.

The mine has compressor capacity for 260 power drills and operates about 175 machines, in sinking, drifting and stoping, and the diamond drill is used extensively in exploratory work. The mine has total hoisting and rockhouse capacity for the production of 5,000 tons of stamp-rock daily.

Electric underground traction is in extensive use throughout the mine. The plant was installed by the General Electric Co., tram-lines averaging about 1,800' each in length, with gradients of 1.5% towards the shafts. The equipment includes 20 electric locomotives, each weighing 5,500 lbs., standing 3' high by 43" wide and 9' long, with draw-bar pull of 700 lbs. on a level track, each hauling 4 or 5 three-ton rock-cars, at a speed of 6 to 8 miles per hour, one man caring for each train. The haulage plant will be extended to No. 8 shaft, on the 49th level, from end to end of the mine. The underground traction power plant is on the 57th level of No. 2 shaft, having a 100-kw. direct current motor operating the haulage system. Tram-cars are unloaded into 500-ton storage bins, built on the hanging-wall side of the shafts, there being such bins on 2 levels of No. 2 shaft, 4 levels of No. 6 shaft and 7 levels of No. 7 shaft. This system of storage obviates the loss of time by either the tram-lines or skips, and adds at least 25% to the hoisting capacity of the mine.

Owing to the absorption of adjoining mines, from time to time, the Quincy shafts are numbered irregularly, and are described hereinafter in order of occurrence from south to north, rather than in order by number.

No. 7 shaft, the southernmost, planned and sunk by Mr. John L. Harris, is 5,162' deep. This shaft is sunk on a catenary curve, leaving surface at an angle of 53°, and being bottomed at an angle of 37° 30'. The shaft was sunk 4,000', in 18 months, through very refractory rock, this speed being rendered possible by sinking and raising in 5 sections, simultaneously. This shaft operates 30 drills, and has a productive capacity of 1,800 tons daily, as compared with a former capacity of about 1,000 tons.

The equipment of No. 7 shaft includes a steel shaft-rockhouse, 100' high, with large wings, which was remodeled, 1907, and nearly doubled in capacity, being given 750-ton bins. The rockhouse has a steam-hammer and two 24x36" crushers, latter replacing 5 smaller crushers. In 1904 this rockhouse required 28 men for its operation, the force being reduced, 1905, by remodeling, to 16 men, while after the changes of 1907, five men can handle 1,800 tons of rock daily, where 28 men were needed, five years previously, to handle less than half this tonnage. It is this sort of progress that keeps the Quincy vigorous and successful in its seventh decade of active production.

Equipment of No. 7 shaft includes an 8,000-h. p. Allis-Chalmers Corliss hoist, with 52x84" cylinders and winding drums 28' in diameter by 11' 9" face, carrying 8,000' of 1½" steel cable, the main shaft weighing 120,000 lbs. The hoist can raise 6-ton skips, from a depth of 1½ miles, at a speed of 3,000'

per minute, hoisting being limited to this rate by an automatic cutoff, which also prevents overwinding. Starting a load of 6 tons from a depth of more than a mile, the hoist, if untouched, will check, without damage, after raising the skip a few feet higher than the appointed place in the shafthouse. There also is a 1,300-gallon bailer. The engine-house at No. 7 shaft is 58x94', with a 56x92' boiler-house adjoining, both of stone, with steel truss roofs, and there is a second boiler-house, each having eight 100-h. p. Roberts tubular return horizontal boilers.

No. 4 shaft, 860' next north of No. 7, is 4,186' deep, bottomed on the 51st level. The stoping ground tributary to No. 4 being nearly exhausted, and as a new hoist would be required for greater depth, the lower stretches of ground are reached from No. 7 shaft, by electric tram. Previous to abandoning No. 4, a more systematic search was made of the West Lode, which was successful, to the point of opening several years' reserves of stoping ground of fair tenor, though below the average grade of the Pewabic lode. Surface equipment at No. 4 shaft includes air-compressors of 40 drills aggregate capacity.

No. 2 shaft, 585' next north of No. 4, is 5,500' deep, being, except Quincy No. 6, the deepest in the Lake Superior district, outside of the Calumet & Hecla and Tamarack mines. This shaft operates 40 power drills and has a 1,300-gallon bailer for raising water.

No. 2 shaft has a new shaft-rockhouse, 180' high, of steel and reinforced concrete, built, 1908, by the American Bridge Co. Stamp-rock from the shaft is dumped onto grizzlies, with wide bars, smaller material falling into circular bins, whence it passes by gravity to the crushers and thence into the main rockhouse bin, which is circular, built of steel plates. The smaller mass copper passes through the grizzly-bars, and is picked out by workmen and dropped into a chute carrying it to a steam-hammer, there also being a chute for waste-rock. The grizzlies allow large pieces of rock to fall into a bin of reinforced concrete in front of the steam-hammer, where broken and sent to the main rockhouse bin through a chute, while mass copper from the steam-hammer is dropped into a tube of steel leading to a circular steel bin, with bottom of steel rails reinforced by concrete, which loads into railroad cars, through chutes with gates operated pneumatically.

No. 2 shaft has a special crushing plant for waste-rock, between the collar of the shaft and the rockhouse. Poor rock is dumped into a circular bin, and drawn by gravity to a crusher, going thence to circular storage-bins, from which it is drawn off into wagons or railroad cars, for use in railroad ballasting, road building and concrete work. When required, larger masses of rock are selected and stored for masonry work.

The surface equipment at No. 2 shaft is very heavy, being practically a duplicate of that at No. 7, including a powerful hoist. The 53x69' compressor house, of stone and steel, with fire-proof truss roof, houses two 60-drill cross-compound 2-stage condensing right and left hand Corliss air-compressors, so connected that air therefrom is available in any part of the mine, the cross-connection eliminating danger of inadequate air supply through disabling of either section. Steam from the compressor-plant exhausts into a dam built for the purpose. The boiler-house has 5 Hawley down-draft furnaces.

No. 6 shaft, 1,928' north of No. 2, is only 200' south of the Franklin line. This shaft has a 1,300-gallon bailer and operates 40 power drills. The shaft was 5,500' deep June, 1908, and production was somewhat decreased by No. 8 shaft taking considerable ground under the Franklin mine, previously tributary to No. 6. Equipment includes an Allis-Chalmers duplex hoist, with 22' 6" straight-face drum, raising 8-ton skips. There is a 100-drill 2-stage compound air-compressor, and a centrifugal feed-water heater, attached to

one cylinder of the duplex hoist. The boiler-house, 56x75', has four 250-h. p. Wickes water-tube vertical boilers and nine 100-h. p. locomotive firebox boilers, and a powerful fire-pump.

The Franklin mine lies next north of No. 6. The Quincy bought the old Franklin mine, area 160 acres, for \$170,000, taking possession December, 1908, the Franklin being closed down as soon as taken over by the Quincy. It is uncertain whether the old shafts of the Franklin will be used by the Quincy.

No. 3 Franklin shaft is 3,200' deep, bottomed at the Quincy line, and has been a scrap for some years.

No. 5 Franklin shaft, 2,850' deep, also is bottomed at the Quincy line. Some stopes have been opened on the West Lode from this shaft.

No. 8 shaft, also known as the Mesnard, is 4,168' north of No. 6, and is 4,500' deep, the 24th level of No. 8 corresponding to the 42d level of No. 6. Permanent production was begun circa April, 1907, No. 8 operating 50 drills and being one of the largest producers of the mine. No. 8 shaft showed poorly in the upper levels, but the lower workings, while by no means up to the Quincy average of twenty years ago, in either quantity or quality of ore developed, show a wider and better mineralized lode than above, and the ground is of very satisfactory average, the improvement beginning with the 10th level and being marked below the 20th level, and the average of No. 8 is nearly or quite up to the present average of the old Quincy and Pewabic workings. The best ground apparently is shown to the southward, though improvement was noted, 1908, in the northern drifts, toward the Pontiac boundary. Levels in No. 8 are opened, uniformly, at 135' intervals, and connection was secured July 15, 1906, between the 24th level of No. 8 and the 42d level of No. 6, at a depth of 3,354', this level passing underneath the entire workings of the old Franklin mine. The productive capacity of No. 8 shaft is fully 1,000 tons daily.

The shaft-rockhouse at No. 8, of frame and structural steel, is 41x155' on the ground and 150' high. Stamp-rock is dumped from the skips, as hoisted, upon grizzlies of 2" steel bars, placed 2" apart, at an angle of 45° in an upper section, with a lower section at 20° only, in which bars are 12" apart from center to center, the combination grizzly assorting rock automatically into two grades, the fine stuff going to ore-bins and the coarse falling into two chutes, receiving equal portion, which feed direct to two rock-crushers on the floor below, no shoveling being required. The heavy rock, too large to pass the 10" aperture in the lower section of the grizzly, falls to the floor, and is broken by a trip-hammer. The new grizzlies save one-half on rock-house labor, and greatly lighten the work of the remaining employees.

The power plant at No. 8, of structural steel and brick, is 140x162' in size, with a 9' basement under the engine room. Hoisting is by a Nordberg 32x72" duplex-cylinder engine, with double-conical drum of 12' 6" minimum and 18' 6" maximum diameter, good for 6,000' depth. In a wing, built 1907, on the south side of the power-house, is a 65-drill Nordberg 2-stage cross-compound air-compressor. The boiler room has ten 250-h. p. Parker and Burt boilers, with steel and brick coal-bins that have direct rail connection over a trestle, and a 140' reinforced concrete smokestack, standing on a 16' base. Equipment at No. 8 shaft includes a change-house, with concrete walls and roof, and a considerable number of dwellings for employees.

No. 9 shaft, 2,600' north of No. 8, is the old 100' Pontiac shaft, cut down to 3-compartment size, and was about 200' deep at the end of 1908, giving a promising showing at this shallow depth. The Pontiac tract never was a producer, and has been but slightly explored.

The Quincy bought of the Arcadian, Nov. 19, 1908, for \$750,000, a tract of 800 acres, to the north of the Pontiac tract, carrying about one mile of

the Pewabic lode. These lands, formerly held by St. Mary's Mining Co., before bought by the Arcadian, are the N.  $\frac{1}{4}$  of Section 18, T. 55 N., R. 33 W., and the N.  $\frac{1}{2}$  and SE.  $\frac{1}{4}$  of Section 13, T. 55 N., R. 34 W.

The surface plant of the Quincy is exceptionally complete. Near No. 2 shaft is the 62x145' fireproof machine-shop, of stone, brick and steel, with truss roof, having a traveling crane with crane-run for entire length of shop, with a complete equipment of machinery and tools. A plastered brick tunnel, connecting the machine-shop, compressor plant and boiler-house, serves as a conduit for steam and air pipes. The blacksmith-shop is 50x154', with a 50x90' wing, of ashlar-finished redstone, with fireproof steel truss roof having 3 large ventilators, and is equipped with 12 forges, steam-hammer, fans, bolt-cutters, drills, etc. Steam has been replaced by electric motors in the carpenter shop, smithy and roundhouse.

Miscellaneous buildings at the mine include a carpenter-shop, warehouse and a considerable number of miscellaneous structures required in the operation of an extensive mine. The general office is a handsome and substantial two-story and basement structure of ashlar-finished redstone.

Water for boilers, and for potable use at the mine location, is taken from Portage Lake, the pumping station, on the margin of the lake, being of ashlar-finished redstone, the pumps forcing water for a mile, against a head of 640'. A large coal-yard is located between shafts No. 2 and 4.

A private telephone exchange, with the central station in a 20x25' frame building, has a switchboard for 100 instruments, with telephones installed in all parts of the mine, shops, mills and smelters.

The company owns several hundred dwellings at the mine location, and a considerable number of dwellings at the mills. The newer houses are mainly of 7-room size, on solid stone foundations, and the mine and mill locations are exceptionally neat. The company also has extensive holdings of valuable land, in and adjoining the city of Hancock, and portions of this land have been platted, from time to time, for residence purposes, and sold at good prices.

The company's private rail line, known as the Quincy & Torch Lake Railroad, built 1890, is 6 miles long, touching all of the shafts and shops at the mine, and at the boiler-house, wharves and coal-sheds at the mill, and is connected with the Mineral Range, Hancock & Calumet and Copper Range railroads. The rail line has solid rock ballasting and steel bridges, with a continuous down-grade haul between the mine and the mill. Equipment includes 6 locomotives, freight cars and nearly 150 hopper-cars for rock, the latter having automatic couplers and air-brakes. The roundhouse, near No. 7 shaft, has a 36x40' addition containing a special machine shop, for the use of the railroad only.

The mills, 6 miles from the mine, at Mason, on Torch Lake, have a combined stamping capacity of about 4,500 tons daily. No. 1 mill, of wood, had 5 Allis-Chalmers 2-way stamps, with 20" cylinders, using the coarse-stamping system, but 2 heads were given 24" cylinders in 1908, with work begun on a third head. The heads with 24" pistons take steam at 100 lbs. pressure, and it is probable that all the remaining stamps will be changed over to cylinders of 24" size, credit for which is due Mr. Jas. W. Shields, the mill superintendent. On test, one 24" head stamped 865 tons of rock in 24 hours, oversize being handled in another head, equivalent to handling oversize in rolls, as is done generally in the case of compound stamps. The heads with 24" pistons have an average daily working capacity of 700 tons, occasionally reaching 800 tons, which compares favorably with the work of steeple-compound stamps. Dressing machinery at No. 1 mill includes 92 Hodge jigs and 32 Wilfley tables.

No. 2 mill, standing 630' north of No. 1, is 132x216' in size, of steel on stone foundations, with 180 windows, each having 13 $\frac{1}{2}$  sq. ft. of glass,

flooding the interior with light. This mill has three 20" Allis-Chalmers heads, each stamp set on foundations of heavy timbers and concrete, surmounted by a bottom plate of 22 tons, a middle plate of 18 tons and a top plate of 18 tons, all of solid iron castings, above which are the mortar-boxes of the stamps. One head was remodeled, as a steeple-compound stamp, in 1905, and this was carefully tested, the water condensed from steam used being weighed, giving a close check on the duty of the engine. The result of the very careful tests made decided the management to stick to simple heads. Finishing jigs and slime-tables have been replaced by 24 Wilfley tables, 8 for each stamp, assisted by 4 Standard concentrators. Each stamp has 12 rough jigs, 6 Wilfleys for finishing and 2 Wilfleys, and 1 Standard table for slimes. Stamps have 1" revolving screens for mortar-boxes and the mill has a settler, from which slimes are taken to the Wilfley tables. Regrinding is done by a Trent Chilean grinder, with 3 jigs and 3 Wilfleys as auxiliaries. Regrinding of raggings in No. 1 is done by an Allis-Chalmers Huntington mill. The mortars of all stamps have hydraulic discharges, as have the launders leading from the mortars, these giving about 60% of the total production of copper secured at the mills. By the adoption of hydraulic discharges and other improvements, the capacity of the stamp-heads has been increased about 25%, while changes in the wash have given an increased capacity of 30%, with labor costs reduced 25% and loss in tailings cut down 40 to 50%. About 35% of the present product of the mill is No. 3 grade mineral, carrying very fine copper. Mineral is dressed much lower than formerly, averaging, 1907, only 63.2% fine copper.

Mineral bins receive mineral in buckets by overhead trolley from the wash-room in No. 1 mill, and from No. 2 mill in hopper-cars drawn by an electric locomotive traversing a 650' track connecting the mills. The mineral-bins, of concrete and cement, are kept at a temperature of 80° F. to dry out the water remaining from the wash, and gates are operated by steam pistons. There is a 54' platform-scale, with minimum weighing capacity of 10 lbs. and maximum of 220,000 lbs.

The 56x90' power-house, of steel frame, on stone foundations, at No. 2 mill, is equipped with four 250-h. p. Wickes vertical water-tube boilers and a 100' smokestack on a 30' foundation. There is an electric light plant, and in connection with the mills there is a machine shop and several minor buildings.

The 54x54' brick and steel pumphouse at the mills has a 20,000,000-gallon Allis-Chalmers vertical triple-expansion pump, and the old pumphouse has 3 pumps with a combined capacity of 21,000,000 gallons daily. Water is taken from a 7x7' 6" tunnel, driven 100' under the bed of the lake. A 6x6' 6" tunnel 440' long connects the mills, boiler-houses and pump-houses, this being bricked and plastered inside, and carrying both water and steam pipes.

A considerable village, made up solely of employees and their families, has grown up about the mills.

The extensive tailings of the mills at Mason are under lease to the Mason Mfg. Co., and various experiments on re-concentration have been conducted, at intervals, since 1902.

The Quincy has 3 docks, of which the first is at Hancock, with a 40x416' wharf and a 64x124' warehouse, having deep water in front and railroad tracks behind. A second dock, at the Ripley smelter, has a 350' shipping wharf for copper and a 250' coal wharf. The third dock, at the Torch Lake mills, has a 40x400' wharf, built of Washington fir, with 18' of water alongside, on it being a 300x300' coal-shed, of steel, with corrugated iron siding and roofing, having storage capacity for 80,000 tons of bituminous coal, this being about the annual consumption of the mine and mills. There are 3 steam coal-hoists, capable of unloading 100 tons per hour, each. These have 120'

steel towers, traveling on a track 22' wide and 300' long, running the entire length of the shed. The plant was built by the American Bridge Co., at a cost of about \$200,000, and effects a saving of circa 12 cents per ton on all coal used. The railroad reaches the coal-shed by a 650' trestle, partly of timber and partly with steel bents, supported on 240 concrete piers.

The smelter, blown in Dec. 1, 1898, is at Ripley, on the shore of Portage Lake, opposite Houghton, just east of Hancock and only a half-mile from the mine. These works do a custom business, treating the mineral of the Franklin, Mass and Adventure mines, in addition to that of the Quincy. The principal buildings are of ashlar-finished redstone.

The 40x95' mineral-house is reached by a 460' trestle, mineral arriving from the mills in hopper-bottom cars, and being dumped into storage bins, whence it is drawn off, as required for smelting, into steel trucks, running on rails under the gates of the bins.

The 84x144' reverberatory furnace building has four 40-ton reverberatories, and a second furnace building, erected 1904, has a 60-ton reverberatory furnace, equipped with an automatic casting machine. On arriving at the reverberatory building, the trucks containing mineral are lifted by electric cranes, and contents dumped into the furnaces, which are top-charged. An overhead trolley, in the main furnace building, permits handling large bars and cakes, and a trolley dipping system is in use for casting. Owing to lack of slag room, a new system has been installed, by which 3,000-lb. slag-pots have replaced the diminutive pots formerly used. The slag-pots are trammed from the furnaces to a 30' hydraulic elevator, which raises the pots and dumps their contents over the end of a trestle.

A briquetting plant, built 1906, of concrete blocks, has 2 retorts of boiler-iron, each 31' long and 72" in diameter, for briquetting low grade mineral, previous to smelting.

The smelting plant includes a cupola building with one blast-furnace, an engine-house, casting-house, cooper-shop, office, laboratory, coal-shed, a small concrete machine-shop and a 50x100' warehouse.

Production of fine copper has been as follows: 18,498,288 lbs. in 1903; 18,343,160 lbs. in 1904; 18,827,557 lbs. in 1905; 16,194,838 lbs. in 1906; 19,799,973 lbs. in 1907, and to the end of 1907 the mine had produced 390,274,045 lbs. fine copper. Production, 1908, was circa 20,000,000 lbs. fine copper. The mine makes about 100,000 oz. silver yearly. The last detailed annual figures, for 1905, gave a yield of 16.6 lbs. fine copper per ton of rock stamped, but returns probably were about 15 lbs. only, in 1908. Production for last quarter of 1908 was circa 4,200 tons of stamp-rock daily.

But for the heavy outlay for improvements, begun in 1898, the wisdom of which was questioned at that time by many shareholders, the Quincy today would be a decadent property, with but a few uncertain years of life remaining, whereas, it secured, in 1908, the largest production in the history of the mine. The policy of growth, begun with the purchase of the Pewabic mine, nearly 20 years ago, has been continued steadily, and the management is entitled to credit for following, consistently, the policy of expansion that is necessary to the successful operation of any large industrial enterprise in the Twentieth Century.

#### **QUINCY MINING CO.**

**UTAH.**

Dead. Property sold, April, 1902, to Daly West Mining Co. Formerly at Park City, Summit Co., Utah.

#### **QUINTERA MINING CO., LTD.**

**MEXICO.**

Office: 11 Rue Boudreau, Paris, France. English office: 20 Bishopsgate St., London, E. C., Eng. Mine office: Aduana, Alamos, Sonora, Mex. Employs circa 400 men. Jacques F. Kulp, chairman; A. Dubois, vice-chairman; S. Ein-

horth, secretary; E. May, treasurer; J. Hebart, manager; C. Mahant, superintendent; Miguel Valenzuela, mine superintendent; L. Le Bouticaut, mill superintendent; Francisco A. Esquer, smelter superintendent. Organized May 4, 1888, under laws of Great Britain, with capitalization £52,000, shares £1 per. Pays annual dividends of 2s. to 5s. Net earnings were £8,196, and dividends were £5,850, in 1907.

Lands, 26 claims, area 154 hectares, also a 2-hectare millsite, and the ranchos of Cieneguita and Calera, with total holdings of 6,000 hectares, in the Alamos district of Sonora and the Fuerte district of Sinaloa. Property shows fissure veins in trachyte, and contact deposits between trachyte and granite, there being 4 ore bodies, of which one, under development, is reported as a chimney vein, raking south, with strike of North 16° East, and dip of 80°, of 20' average width, traceable 500', reported as proven to depth of 2,000'. Property is primarily a silver mine, making lead and copper as by-products, ore being reported by company to average 10% copper; 11% lead; 15% zinc; 200 oz. silver, and \$5 gold per ton, principal copper ores being malachite and chalcocite.

The mine is opened by shafts of 600', 950' and 540', with circa 3,000' of workings, showing 45,000 tons of concentrating ore and upwards of 10,000 tons of ore blocked out for stoping. Mine was opened in the Sixteenth Century, and has been working continuously.

Equipment includes a 450-h. p. steam plant and 90-h. p. electric plant, with 300 h. p. used at the mine, and 540 h. p. at the mill. There are 3 hoists, of 220 aggregate horse power, good for 700' depth, and a 4-drill Fraser & Chalmers air-compressor.

Buildings include a wooden carpenter-shop of 220 sq. ft. area, smithy of 684 sq. ft., office and 3 dwellings. There also is a sawmill.

The mill, of wood, of 2,100 sq. ft. area, and of 45 tons daily capacity, has 20 gravity stamps.

The concentrator, of brick and lumber, of 3,024 sq. ft. area, has a No. 3 Sturtevant crusher, 3 Wilfley tables and 6 slime tables.

The smelter, 2 miles from the mine, receiving ore by tramway, has a 12-ton Fraser & Chalmers blast-furnace, making matte carrying 40% copper, 1,200 oz. silver and 10 grams gold per ton, shipped to Ledoux & Co., New York, for refining.

Production, 1907, was 14,500 tons of ore treated, yielding circa 350 metric tons of matte, carrying about 300,000 lbs. fine copper, 425,000 oz. silver and 3,500 grams gold.

#### RADIUM COPPER MINING CO.

Office: 1228 Seventeenth St., Denver, Colo. Mine office: Radium, Grand Co., Colo. Harry S. Porter, president and treasurer; W. H. Gould, vice-president; P. O. Warren, secretary; preceding officers, A. Cunha and L. D. Cunha, directors. Organized under laws of Colorado, with capitalization \$1,500,000, shares \$1 par. Lands, 12 claims, in the Red Gorge district, having about 700' of workings, with 2 tunnels, upper showing malachite and chalcocite, giving assays of 5.82 to 45.7% copper, from a trace to 5 oz. silver, and from 20 cents to \$5.90 gold per ton.

#### RADIUM MINES CO.

Mine office: Globe, Gila Co., Ariz. Lands, 60 claims, circa 4 miles north of the Old Dominion, in a block of 1 to 2 miles width and nearly 4 miles length, running eastward from Pinal Creek. Ten or more of these claims are said to have produced \$10,000 to \$20,000 each, from surface ores raised by hand-windlasses. Idle.

#### RAINBOW MINING CO.

Mine office: Crown King, Yavapai Co., Ariz. N. E. Paul, general man-

ager. Lands, 2 miles from Crown King, opened by a 160' shaft and 340' tunnel, show a vein of 30" to 6' width, with an 8" paystreak carrying argentiferous and auriferous copper ore of good average tenor. Presumably idle.

#### **RAINBOW MINING CO.**

**UTAH.**

Office: care of Ernest M. Fowler, secretary, Salt Lake City, Utah. Mine office, Alta, Salt Lake Co., Utah. Richard J. Jarvis, president and manager; Geo. Saxon, vice-president; preceding officers, Andrew M. Jarvis, and Andrew F. Jackson, directors. Organized 1906, with capitalization \$50,000; shares 10 cents par. Has a 215' tunnel, showing stringers of ore, and expects to cut the main vein at about 300' length.

#### **RAINBOW MINING & MILLING CO.**

**IDAHO.**

Office: Wallace, Idaho. Mine office: Osburn, Shoshone Co., Idaho. Hon. Herman J. Rossi, president; G. B. Marlowe, secretary and treasurer; Chas. F. O. Merriam, consulting engineer. Lands, 6 claims, near the Gray, opened by a 200' tunnel on a 10" vein of gray copper with iron and quartz gangue.

#### **RAMBLER COPPER MINING CO.**

**ARIZONA.**

Dead. Lands sold, February, 1903, to Lion Copper Mining Co. Formerly at Stoddard, Yavapai Co., Ariz. Described Vol. IV.

#### **RAMBLER COPPER MINING CO.**

**WYOMING.**

Dead. Was succeeded, Oct. 1, 1902, by Rambler Mining & Smelting Co. Formerly at Holmes, Albany Co., Wyo.

#### **RAMBLER COPPER & PLATINUM CO.**

**WYOMING.**

Office: 710-145 LaSalle St., Chicago, Ills. Mine office: Holmes, Albany Co., Wyo. Frank M. Woottton, president; W. J. Sherwood, vice-president; M. M. Green, secretary; Frank C. Sheldon, treasurer; preceding officers, Dorchester Mapes, A. C. Jones, W. C. Stone, W. R. Smythe, Jr., J. Thielman, Frank T. Day and J. B. Stephens, directors. Organized, circa 1907, as a merger of Rambler Mining & Smelting Co. and New Lincoln Copper Co.

The lands formerly held by New Lincoln Copper Co. are 2 claims, patented, area 40 acres, lying north of and adjoining the Rambler mine, on which shafts of 30' and 50', sunk to cut the extension of the Rambler vein, are said to show auriferous and argentiferous copper ore.

The Rambler mine, 10 claims, area 200 acres, fairly timbered, is at the head of Douglas Creek, on the crest of the Medicine Bow Mountains. Mine, opened 1870, for gold, and relocated, 1900, for copper, shows a fault fissure in grano-diorite, carrying a great variety of copper minerals in various stages of alteration, associated with sundry rare metals in commercial quantities, comparatively free from such deleterious elements as bismuth, antimony and arsenic. Ore includes a little native copper, in nuggets and dendrites, associated with cuprite, in the upper levels, also malacinite, chalcocite, covellite, chalcopyrite and chrysocolla, and is especially notable for containing large quantities of covellite, carrying gold, iridium, osmium, palladium and platinum, latter occurring as sperrylite. The ores have a gangue of decomposed granite, giving talcose alteration products, and carrying more or less pyrite, hematite and marcasite, all with small percentages of copper.

Development is by a 65' vertical shaft, from the bottom of which an incline runs, on the vein, at an angle of 45°, with three levels opened, there also being a 175' vertical main shaft, connecting with the original workings on the 2d and 3d levels. The mine has circa 2,800' of workings, and was claimed, by former owners, to have 22,100 tons of ore, ranging from 20 to 45% copper, blocked out for stoping on the first and second levels, but these figures were exaggerated. Exact size of the ore body apparently is undetermined, but ores give assays ranging from 6 to 39% copper, with average smelter returns of 20 to 33% copper from carefully hand-selected ore. Assays of Rambler matte have given 6.75 oz. silver, 2.25 oz. gold and platinum combined, and 6

oz. palladium per ton. Cost of refining the matte and separating the various rare metals is approximately \$40 per ton of copper, or 2 cents per pound.

Surface improvements include a 21x44' shafthouse, ore-bins, carpenter-shop, smithy, office, assay office, sawmill, boarding-house and bunk-houses.

There is a small smelter having a 40-ton water-jacket blast-furnace, connected with the ore-bins by trestle, but the smelter has been idle since 1903, when production was 249,196 lbs. fine copper. Property considered promising, but management, which is practically same as that of the old company, is not regarded favorably.

#### **RAMBLER MINING CO.**

Dead. Company lost lands through failure to do assessment work. Formerly at Rambler, Carbon Co., Wyo. Fully described Vol. VII.

#### **RAMBLER MINING & SMELTING CO.**

Dead. Succeeded, circa 1907, by Rambler Copper & Platinum Co. Formerly at Holmes, Albany Co., Wyo. Very fully described Vol. VII.

#### **BAMMELSBURG MINE.**

Office and mine: Clausthal im Harz, Prussian Saxony, Germany. Employs circa 650 men. Bergrat Richard, director. Property, owned jointly by the Crown of Prussia and the Duchy of Brunswick, is a very ancient mine, worked since A. D. 972.

Lands carry a lenticular ore body, of 40' to 50' width and circa 4,000' length, in schists intercalated in Devonian slates. The ore is a dense mixture of chalcopyrite, galena, sphalerite and pyrite, with occasional tetrahedrite, gangue being mainly of barium sulphate, aluminum silicate and calcium-magnesium carbonate. Ore as mined is divided into 3 grades, first averaging 18.37% copper, and 3.85% lead; second grade averaging 12.07% copper and 1.7% lead; third grade averaging 5.44 copper and 1.25% lead. The three grades of ore carry from 0.008 to 0.017% silver, and from 0.00011 to 0.00013% gold. All ores are slightly arsenical, ranging from 0.1% arsenic in the richer copper ore to 0.2% arsenic in third grade ore. The mine also has mixed ore, carrying about 5% copper and 6% lead, both with gold and silver values, and lead ore averaging 9.15% lead, with a trace of copper.

The mine is developed by shafts of 296 and 316 meters depth, and has about 16,000 meters of workings, estimated to show circa 15,000,000 metric tons of cupriferous and plumbiferous slates, averaging circa 4.5% copper, 10% lead, 20% zinc and 3 oz. silver per ton.

Equipment includes 2 hoists, good for 350 meters each, and a 30-drill air-compressor.

The copper smelter, known as the Oker Hütte, at the mine, is of 300 tons daily capacity, while lead ores are reduced at other works, known as the Jafus Hütte and Sophien Hütte. Equipment of the Oker Hütte includes 20 kilns and ovens for calcining, twelve 23-ton blast-furnaces and five 15-ton reverberatory furnaces. The first-fusion product is a matte of 35 to 40% copper tene, carrying 3 to 4% lead in mixed ores treated, and this matte therefore is roasted and remelted. The Oker works produce also considerable speiss, carrying about 51% copper, 35% lead, 1.8% zinc and 0.175% combined gold and silver, with traces of nickel and cobalt, also iron, arsenic, bismuth, antimony and sulphur. Product of the Oker Hütte is blister copper and anodes.

The Oker Hütte includes an electrolytic refinery and acid plant, annual capacity of latter being 25,000 metric tons sulphuric acid of 50° Beaumé. The electrolytic refinery has 600 tanks with multiple arrangement. Annual production of the Oker Hütte is circa 1,700 metric tons of fine copper, in various forms, and about 1,100 metric tons of bluestone. Production, 1902, was 3,608,930 lbs. electrolytic copper, 1,074 metric tons bluestone, 5,233 metric tons

#### **WYOMING.**

#### **WYOMING.**

#### **GERMANY.**

lead, 11,522 kgs. silver and 96.5 kgs. gold, also quantities of various by-products, including copperas, zinc sulphate, soda, etc. Production, 1905, was 3,527,360 lbs. fine copper, and, 1907, was circa 3,500,000 lbs. fine copper.

**COMPAÑIA MINERA IGNACIO RODRIGUEZ RAMOS, S. A. MEXICO.**

Office: Jiménez, Chihuahua, Mex. Mine office: Baca, Hidalgo, Chihuahua, Mex. Alfredo Rodriguez, president; Rafael L. Quiroz, general manager; Ramón G. Aguirre, superintendent. Organized 1902, under laws of Mexico. Lands, 15 pertenencias. Country rock is limestone, carrying lenticular ore bodies. One lens, under development, has a width of 78' and length of 140', with depth not ascertained, carrying malachite, azurite and galena, said to average 5% copper, 25% lead, 6% zinc, 15 oz. silver and \$8 gold per ton, opened by an 800' shaft and tunnels of 400' and 900'. Mine has a steam hoist and two electric drills, and ships ore to the American Smelting & Refining Co., for reduction. Output, 1905, was circa 35,000 metric tons of ore, and production therefrom is estimated at 1,750,000 lbs. fine copper.

**JOSE TOMAS RAMOS i RAMOS.**

CHILE.

Office and mine: Chalingá, Illapel, Coquimbo, Chile. Property is the Llamaco mine, showing large ore bodies of 4 to 7% average copper tenor, well adapted to concentration, but output is hampered by carriage charges of 13 pesos per metric ton to the railroad. Has a small smelter. Production, 1903, was only 155 metric tons of 22% ore, secured with 14 workmen. With rail communication and a modern reduction plant the property could be made a considerable producer.

**RAMSEDELL-PARROT MINE.**

MONTANA.

Owned by Anaconda Copper Mining Co.

**RANKIN COPPER MINING CO.**

WYOMING.

Office and mine: Rawlins, Carbon Co., Wyo. Organized 1904, with capitalization \$25,000. Idle and apparently moribund.

**RANSON COPPER MINING CO. OF ONTARIO, LTD.**

ONTARIO.

Office: Sault Ste. Marie, Mich. B. Frank, president; David Rustander, secretary; D. J. Ranson, superintendent; R. H. Taylor, consulting engineer. Organized 1902, under laws of Ontario, with capitalization \$3,000,000, shares \$1 par. Lands, 3,600 acres, in Chesley and Anderson townships, Algoma, Ontario, said to show 14 veins, of which 6 contact veins have been opened by 8 shafts, of 23' to 75' depth, veins averaging 25' width and giving assay values up to 12% copper and 3 oz. silver per ton, from chalcopyrite. Has steam power. Idle for several years and apparently moribund.

**RABITAN COPPER WORKS.**

NEW JERSEY.

Owned by United Metals Selling Co.

**RAEUS MINE.**

MONTANA.

Owned by Butte Coalition Mining Co.

**RATTLER MINING CO.**

ARIZONA.

Office: 740 Postal Telegraph Bldg., Chicago, Ills. Mine office: Globe, Gila Co., Ariz. Kendrie P. Crawford, president and manager; Wm. A. Gilpin, superintendent. Organized under laws of Maine, with capitalization \$500,000, shares \$1 par. Controls, through ownership of 53% of issued stock, the Iron Horse Mining Co. Lands, 6 claims, known as the Iron Horse group, 5 miles from Globe and circa 3 miles east of the Iron Cap mine, having a 55' three-compartment shaft, in a vein showing a 25' outcrop, selected ores from which have assayed up to 16% copper and 192 oz. silver per ton.

**RAVEN MINING CO.**

MONTANA.

Office and mine: 68 Silver Bow Blk., Butte, Silver Bow Co., Mont. E. C. Frisbie, president; John Berkin, vice-president and general manager; J. A. Poore, secretary; A. B. Curtis, treasurer; preceding officers, Donald Campbell,

Robt. A. Griffing, E. J. F. Rea and E. A. Slack, directors; W. Spencer Patchin son, consulting engineer. Organized 1903, under laws of Montana, with capitalization \$500,000; increased, 1907, to \$1,000,000, shares \$1 par; issued, circa \$630,000. Bonds, \$65,000, at 7%. On Sept. 11, 1908, the company had on hand \$1,822 in cash, with bills payable of \$16,500. American Trust Co., Boston, transfer agent. Annual meeting, second Tuesday in June.

Lands, 2 claims, fractional, area 20 acres. Property includes the Raven claim, owned outright, and a six-sevenths interest in the Snoozer mine, one-seventh of which is owned by the Red Metal Mining Co., which is the operating corporation of the Butte Coalition Mining Co. Lands, which are considered well located, have an east and west length of circa 2,000', in line with the Mountain Consolidated mine.

The Snoozer claim has shafts of 75' and 125', with 5,780' of workings, but was a producer, through the Buffalo shaft of the Anaconda company, until June, 1906, when the company was enjoined from working the Snoozer vein, which is subject to litigation, as the Butte & Boston claims that the vein apices on the La Plata claim of that company, and, July, 1907, the lease of the Buffalo shaft was canceled by the Amalgamated Copper Co., and the claim advanced that the Snoozer vein apices beyond the Raven side-lines. This matter remains unsettled. The Snoozer claim shows 4 veins, and ore produced therefrom, prior to suspension, averaged about 4% copper, 8 oz. silver and \$1.25 gold per ton. The Snoozer has been opened on the 800', 1,200' and 1,500' levels, by crosscuts from the Buffalo shaft of the Anaconda, the 1,200' level showing a 4' vein carrying high grade ore, while on the 1,500' level the ore body was much wider. Previous to suspension, the Snoozer was shipping about 30 tons of ore daily, to the Washoe works.

The Raven claim, previously idle for some time, has been developed vigorously since Apr. 1, 1907. Development is by a 700' air-shaft and a 1,200' incline known as the Raven shaft, planned to be sunk to 1,500'. The depth of 1,200' on the incline gives a vertical depth of about 1,000', and there are circa 5,500' of workings on the Raven claim. On the 900' level a crosscut shows a 22' vein carrying a hanging-wall paystreak averaging about 3.5% copper. On the 1,100' level the vein is of about 30' width, showing ore below commercial grade, averaging circa 2% copper, with small gold and silver values. The Raven claim has 3 veins, and to depth of circa 500' was a silver-gold mine, yielding ore averaging circa 16 oz. silver per ton, with fair gold values.

Equipment includes a 20x36" hoist, good for one-half mile depth, and a 5-drill Ingersoll-Rand air-compressors, with 4 mine buildings.

From June 1, 1907, to Sept. 11, 1908, four sets of leasers, working in the upper levels, extracted gold and silver ores, on a royalty basis, company's proportion of values amounting to \$2,771.

The standing of the company was injured, 1906, by rank manipulation of the share market, stock going up to \$8 per share, then back again to 50 cents. In November, 1908, large shareholders came to the company's relief, by purchasing 30,000 shares of treasury stock, at par, giving the company funds sufficient to liquidate its floating indebtedness, and provide for further development. Property is considered promising, though it has not yet reached an assured basis.

#### RAVENSTHORPE SMELTER.

AUSTRALIA.

Owned by Phillips River Gold & Copper Co., 1901, 22,114.5

#### RAWLEY MINING CO.

COLORADO.

Mine office: Bonanza, Saguache Co., Colo. David G. Weems, manager, at last accounts. Ores carry lead, silver and copper. Has steam and electric power. Presumably idle.

**RAY CONSOLIDATED COPPER CO.**

Office and mine: Exchange Bldg., Colorado Springs, Colo. Branch office: 1107 Union Trust Bldg., Los Angeles, Cal. Mine office: Kelvin, Pinal Co., Ariz. Sherwood Aldrich, president; D. C. Jackling, vice-president; E. P. Shove, secretary and treasurer; Philip Wiseman, general manager; Seeley W. Mudd, chairman executive committee; preceding officers, C. M. MacNeill, Spencer Penrose, John Ahman and J. G. Gordon, directors; Chas. H. Cutting, superintendent; A. Chester Beatty, consulting engineer.

Organized circa 1907, under laws of Maine, with capitalization \$6,000,000, increased, circa 1908, to \$8,000,000, shares \$10 par; issued, \$6,156,000. Bonds, \$8,000,000, at 6%, dated July 1, 1907, due July 1, 1924, convertible into stock until July 1, 1914; issued, \$1,156,000. Hayden, Stone & Co. have an option, until July 1, 1909, on \$1,800,000 of convertible bonds remaining unissued. Company was said, November, 1908, to have circa \$275,000 on hand. Company is a twin of the Gila Copper Co., and is controlled by the same interests as the Utah Copper Co. Marten Trust Co., New York, registrar and transfer agent.

Lands, 1,296 acres, on Mineral Creek, 6 miles from Kelvin, the nearest railroad point, also the townsite of Kelvin, bought of the Ray Copper Mines, Ltd. The property shows a mineralized zone approximately 3,000' wide and 12,000' long, with prospects of further extensions, with a porphyritic belt, cut by numerous diabase dikes, having impregnations of low grade copper sulphides, ore being disseminated in granules and veinlets through the country rock, the deposits being markedly similar to those at Ely, Bingham and Clifton. Depth of payable ore apparently is undetermined, but presumably is at least 200' to 300'. Under the old management the property was said to show nearly 1,000,000 tons of ore, claimed to average 4.5% copper, the claimed ore tenor being much too high, as apparently the average tenor of the ore is 2 to 2.5% copper, though with some ore of higher grade.

Development is by a 300' shaft and several working tunnels, but the ore body has been proven mainly by the use of 6 diamond drills, each averaging about 50' of boring daily, holes being bored at 100' intervals to depth of 350', the drill borings being estimated to develop between 4,000,000 and 5,000,000 tons of ore, averaging 2.25 to 2.5% copper. The former owners expended about \$1,000,000, largely in misdirected work.

Transportation between the mine and mill is by a 6-mile narrow-gauge private railway, which was not entirely completed, at the end of 1908.

An old concentrator, enlarged, 1907, to 300 tons daily capacity, on the Gila river, is planned to be enlarged to 1,000 tons size, as the first unit of a 6,000-ton mill. It is claimed that the ore can be concentrated 15 or even 20 into 1.

The property formerly had a smelter, erected 1897, but never blown in, which was burned, March, 1906, the fire being a blessing in disguise, as the smelter was of no particular value for the present day.

Very extensive development was under way, 1907, with a force of about 600 men, until September, 1907, when the force was first cut in half, and then all work suspended, work being resumed, 1908, with a smaller force. The Ray Consolidated is a property of exceptional promise, and is under thoroughly catastrophic management.

**RAY COPPER MINES, LTD.**

*See Ray, Lands sold, circa 1907, to Ray Consolidated Copper Co. Formerly at Ray, Pinal Co., Ariz. Fully described Vol. VI.*

**RAY EXTENSION COPPER CO.**

Mine office: Ray, Pinal Co., Ariz. Organized circa July, 1907, under laws of Arizona, with capitalization \$1,000,000, by D. A. Seaman and R. W. Seaman.

**ARIZONA.**

**RAYMOND COPPER & SILVER MINING CO.** MONTANA.

Office and mine: Helena, Lewis & Clark Co., Mont. J. E. Teague, secretary. Lands are in the Lump Gulch district, east of the Liverpool mine, between the heads of Strawberry and Shingle Gulches, on the western slope of Strawberry Mountain. Development is by two shafts, one of 140', and a 240' tunnel. Shipped a little ore, 1907.

**RAYNOR COPPER MINING CO.** CALIFORNIA.

Dead. Formerly at Lewis, Mariposa Co., Cal. Described Vol. VI.

**READY BILLION COPPER CO.** ALASKA.

Office: 517-131 State St., Boston, Mass. Property is in Alaska. Presumably idle.

**READY PAY MINING CO.** NEW MEXICO.

Mine office: Hillsboro, Sierra Co., N. M. Has auriferous and argentiferous copper ore. Idle and presumably moribund.

**COMPANIA MINERA REAL DEL MONTE Y PACHUCA.** MEXICO.

Office: 58 Congress St., Boston, Mass. Mexican general office: 11 San Bernardo, Mexico, D. F. Mine office: Pachuca, Hidalgo, Mex. Pablo Martinez del Rio, president; A. F. Holden, managing director; preceding officers, W. H. Cooledge, K. A. Clark and Señor Eigast, directors; Edw. E. Merrill, manager; H. A. Prosser, metallurgical superintendent; T. H. France, consulting engineer. Capitalization 225,000 pesos, shares 100 pesos p. a. Is controlled, through ownership of practically entire stock issue, by United States Smelting, Refining & Mining Co. Paid first dividend, under new management, April, 1908.

Lands, 116 claims, in 2 districts; principal mines being the Camalia, Barron and Juárez in Córreza, and the Cabrera, Aviadero, Santa Brígida, Dificultad and Resquicio at Real del Monte.

The Real del Monte is possibly the oldest Spanish mine in Mexico, dating from A. D. 1553, and the patio process of reduction was first used at this mine, in 1557. Electric power is used throughout, 5,000 h. p. being taken from the Compañía Eléctrica y Irrigadora de Hidalgo. Equipment includes 6 powerful electric hoists, capable of raising 10-ton loads at average speed of 500' per minute, equipped with 3-phase, 440-volt, 50-cycle motors. Has electric pumps in the Camalia and Cabrera mines, and steam pumps in the Dolores, San Juan and Dificultad mines.

Plant comprises various mills for ore reduction, including the Loreto mill in Pachuca, using the patio process, and the Hacienda de Beneficio San Antoni de Negla, using the barrel process, with a capacity of 12,000 tons of ore yearly. The Loreto mill has been remodeled and increased to 250 tons daily capacity, using electric power throughout. The new Guerrero mill, opened Apr. 25, 1908, having 40 stamps, tables and a cyanide plant, is rated at 300 tons daily capacity.

Production, under old management, averaged 65,000 metric tons of ore yearly, carrying an average of better than 1 kilogram silver per metric ton. Capacity of new works is practically 3 times that of the old.

**NEGOCIACION MINERA REAL DEL MONTE.** MEXICO.**UNION Y BILBOA.**

Mine office: Ojocaliente, Zacatecas, Mex. H. Dalonne, manager, at last accounts. Has cupriferous silver-lead ores. Presumably idle.

**REALITO GOLD, SILVER & COPPER CO.** MEXICO.

Mine office: Alamos, Sonora, Mex. J. L. Shepard, general manager; D. Durfee, superintendent. Has argentiferous copper ores, with steam power, employing circa 40 men.

**REALITO MINING CO.** MEXICO.

Letter, returned unclaimed from former office, Guadalajara, Mex. Mine office: Tapalpa, Sayula, Jalisco, Mex. Silviano Camberos, manager, at last

## THE COPPER HANDBOOK.

**accounts.** Lands, 25 pertenencias, near Chiquilistán, 50 kilometers northwest of Sayula, including the Cuprifera, Rinconada and Sin Nombre groups. Ore occurs in "mantos," or blanket veins, and in fissures, giving assays up to 60% copper, 2 kgs. silver and \$10 gold per ton. A little ore, smelted in adobe furnaces, at the mines, has given good returns. Presumably idle.

**REBELJ & VIS COPPER MINES, LTD.****SERBIA.**

Office: care of A. F. V. Wild, 28 Budge Row, London, E. C., Eng. Mine office: Rebely, Vljevo, Servia. Organized Nov. 21, 1907, under laws of Great Britain, with capitalization £25,000, shares £1 par.

**R. E. BRUNER COPPER CO.****ARIZONA.**

Office: 812 Grand Ave., Kansas City, Mo. Mine office: Patagonia, Santa Cruz Co., Ariz. R. E. Bruner, president; Rea M. Bruner, vice-president; Glen L. Bruner, secretary and treasurer. Organized June 24, 1907, under laws of Arizona, with capitalization \$3,000,000. Company reported 680,000 shares unissued, Aug. 6, 1908.

Lands, 8 claims, unpatented, near the Anaconda-Arizona and Mansfield. A 54' tunnel, on the Mescal claim, is said to give indications of argentiferous lead and copper ore, and company claimed, August, 1908, to have opened the vein for nearly a mile in length, presumably by trenching, and planned driving a tunnel at least 500' on the Mescal claim.

**RED BIRD MINING CO.****MONTANA.**

Office: Helena, Mont. Mine office: Austin, Lewis & Clark Co., Mont. J. M. Clements, president and treasurer; Frank Jacquemin, vice-president; A. A. Pelletier, secretary and general manager; preceding officers, Robert Lucas and C. O. Clark, directors. Organized Aug. 18, 1902, under laws of Montana, with capitalization \$1,500,000, shares \$5 par. Paid dividends of \$72,000, to end of 1905. Lands, 7 claims, area 140 acres, in the Greenhorn district, carrying 15 fissure veins, of which 2, of 5' average width, are developed by the 400' Red Bird shaft and the 300' Copper Hill shaft. The Copper Hill mine shows sulphide ore averaging 1.3% copper, with a 30% excess of iron, in a 60' vein. The Red Bird mine has about one mile of workings, claimed to put 250,000 tons of ore in sight. Estimated average ore values of the Red Bird, as given by a former management, were 21% copper, 45% lead, 35 oz. silver and \$5 gold per ton, this being manifestly a great exaggeration. Has a 180-h. p. steam plant with 4 hoists and a 4-drill air-compressor. Has 5 mine buildings. Presumably idle.

**RED CANYON MINING CO.****NEVADA.**

Office: 703 Marquette Bldg., Chicago, Ills. Mine office: Gardnerville, Douglas Co., Nev. H. P. Chesley, president; B. F. MacKay, vice-president; A. F. Doyle, secretary and manager; C. L. Doyle, treasurer; preceding officers, L. C. Hunter, W. L. Thompson and P. C. Wilder, directors; H. C. Jensen, superintendent. Organized February, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 5 claims, area 100 acres, well watered and fairly timbered, said to be in the Yerington district, but mine office is in the adjoining county. Property is said to show 3 veins, with northeasterly and southwesterly strike, traceable 7,500'. The main vein is said to be 30' to 100' wide, with dip of 30° to 45°, showing cuprite, malachite, bornite and chalcopyrite, assaying 2 to 6% copper, with some lead. Company claims to have exposed 13,000 tons of ore averaging 8% copper and \$1.30 per ton in combined gold and silver values. Development is by 6 shafts of 30' to 75', and 6 tunnels of 60' to 350'. Company is said to plan a 100-ton smelter.

**RED CLOUD MINING CO.****CALIFORNIA.**

Office: Los Angeles, Cal. Mine office: Salton, Riverside Co., Cal. E. H. Gould, superintendent. Has auriferous and argentiferous copper and lead

ore, with steam and gasoline power, 2-stamp mill, concentrator and 80-ton smelter. Idle.

#### RED CLOUD MINING CO.

MEXICO.

**Dead.** Apparently was successor of Consolidated Gold & Copper Co., and was merged, circa August, 1908, in Kansas-Cananea Copper Co. Lands, circa 8 miles south of La Cananea, were said to show considerable ore of low average copper tenor. Formerly at La Cananea, Arizona, Sonora, Mex.

#### RED CROSS MINING CO.

WASHINGTON.

Mine office: Index, Snohomish Co., Wash. David Boyle, president; D. F. Scanlan, treasurer; E. W. Emerson, secretary. Organized 1906, under laws of Washington, with capitalization \$1,000,000. Lands, 15 claims, in the Wallace district, near the Bunker Hill Mining & Smelting Co., said to show 4 veins, 3 of 7' to 8' average width, and one, in granite, of 25' claimed and apparently about 8' actual average width, opened by a 65' tunnel.

#### REDDING GOLD & COPPER MINING CO.

CALIFORNIA.

Office: 15-951 Eddy St., San Francisco, Cal. Letter returned unclaimed from former mine office, Redding, Shasta Co., Cal. Has a bad habit of changing offices and leaving no address behind. Letters have been returned at various times from former offices at Oakland and San Francisco. H. D. Irwin, president; R. W. Mayhew, vice-president; Thos. Gilbert, secretary; J. H. Creighton, superintendent; preceding officers, A. Ahnefeld and T. S. Basmussen, directors. Organized under laws of South Dakota, with capitalization \$1,000,000. Has authorized a bond issue at 6%. Lands, circa 30 claims at mouth of Middle Creek, and sundry claims at Clear Creek, in the Muletown district, circa 7 miles west of Redding, also placer gold claims. Company claimed, 1905, to be developing a hydro-electric power plant, and claimed to plan building a 500-ton smelter. Is regarded with suspicion.

#### REDEMPTION COPPER MINING & MILLING CO.

ARIZONA.

Office: Kingman, Ariz. Mine office: Chloride, Mohave Co., Ariz. Robt. J. Ferguson, president and general manager. Has auriferous and argentiferous oxidized ores of copper.

#### RED FOX MINING CO.

BRITISH COLUMBIA.

Mine office: McGuigan, Yale district, B. C. Has argentiferous lead and copper ores, slightly developed. Idle several years.

#### RED GULCH GOLD-COPPER MINING & MILLING CO.

COLORADO.

Office: care of E. G. Bettis, president, Canon City, Colo. Mine office: Copperfield, Fremont Co., Colo. Wm. T. Bridwell, vice-president; M. M. Van Fleet, secretary. Is capitalized at 3,000,000 shares, presumably \$1 par. Lands, 11 claims, in the Red Gulch district of Fremont county, 83 acres in the Ilse district of Custer county, and sundry claims in the Monarch district of Chaffee county, Colorado. The Red Gulch group has a 210' shaft, developing silver-lead ore, and shipped, 1907, 150 tons ore of good grade.

#### RED HILL MINING & SMELTING CO.

CALIFORNIA.

Office: care of C. B. Allen, secretary, Los Angeles, Cal. Mine office: Victor, San Bernardino Co., Cal. Dr. C. J. Allen, president; J. W. Jackson, vice-president. Lands are about 10 miles from Victor. Idle and apparently moribund.

#### RED HORSE COPPER CO.

IDAHO.

Mine office: Springston, Kooteepai Co., Idaho. Jasper Neederhood, president; John Neederhood, vice-president; preceding officers and Geo. Ripley, directors; Rudolph A. Jonas, manager. Organized 1904, under laws of Idaho, with capitalization \$1,500,000, shares \$1 par.

Lands, 18 claims, having a shaft and a 748' tunnel, with circa 1,500' of workings, showing ore said to assay 18% copper, with high gold values. Equipment includes a 3-drill air-compressor.

Apparently the local officers stand well, but the company's advertisements, through H. J. Leighton, fiscal agent, were outrageously exaggerated and highly misleading.

#### **RED JACKET & BISBEE DEVELOPMENT CO.**

**ARIZONA.**

Dead. Formerly at Bisbee, Cochise Co., Ariz. Fully described Vol IV.

#### **REDMAN MINING, MILLING & SMELTING CO.**

**ARIZONA.**

Office: 17 Battery Place, New York, N. Y. Mine office: McCabe, Yavapai Co., Ariz. W. D. Wintemute, secretary and treasurer; John Derry, superintendent. Organized under laws of Arizona, with capitalization \$2,500,000, shares \$1 par. Lands include claims in Nevada and Mexico, with principal group one mile northeast of McCabe, said to have about 1,000' of workings, showing a 80' vein of sulphide ore on the 100' level. Plans a 10-stamp mill and concentrator. Management makes promises more lavish than are warranted by development secured.

#### **RED METAL MINING CO.**

**MONTANA.**

Office: 42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. Thos. F. Géle, president; W. D. Thornton, vice-president; preceding officers, J. C. Lalor, C. D. Fraser and James O'Grady, directors; Arthur C. Carson, general manager; Geo. Mouthrop, general superintendent. Organized Feb. 23, 1906, under laws of New York, with capitalization \$11,000,000, shares \$100 par. Entire stock issue is held by the Butte Coalition Mining Co., and the Red Metal Mining Co. is a holding company for the Butte Coalition, direct title to lands being vested in the Red Metal. Holdings supposedly include lands described under the title of Butte Coalition Mining Co., also stock control of the Altee, and a few other small properties, including a seventh interest in the Sneeker mine of the Raven Mining Co.

#### **RED METAL MINING CO.**

**NEVADA.**

Office: care of Alex Colbath, secretary, Salt Lake City, Utah. Mine office: Luning, Esmeralda Co., Nev. Lemuel U. Colbath, president; W. J. Craig, vice-president and general manager; preceding officers, W. Wrightman, Wm. Pischel and Dr. John T. White, directors. Organized circa January, 1907, under laws of Colorado, with capitalization \$1,000,000.

#### **RED MOUNTAIN GOLD & COPPER REDUCTION CO.**

**WASHINGTON.**

Dead. Formerly at Chelan, Chelan Co., Wash.

#### **RED MOUNTAIN RAILROAD, MINING & SMELTING CO.**

**COLORADO.**

Office: 1004 West End Trust Bldg., Philadelphia, Pa. Mine office: Red Mountain, Ouray Co., Colo. Geo. Crawford, general manager; W. C. Aston, superintendent. Lands include the Yankee Girl, Genesee and Vanderbilt properties, carrying auriferous and argentiferous copper ores. Has steam and electric power.

#### **REDOUBTABLE GOLD & COPPER MINING & MILLING CO.**

**COLORADO.**

Office: Salida, Colo. Mine office: Turret, Chaffee Co., Colo. David Heaton, president; W. W. Beiler, vice-president; J. W. Calhoun, treasurer; J. H. Hunt, secretary; preceding officers and Geo. Sullivan, directors. Organized circa 1907, under laws of Colorado, with capitalization \$1,000,000.

Property, formerly held by Par Value Gold & Copper Mining Co., includes a 3-year bond and lease on the Gold Bug and Mandate claims. Lands show 4 fissure veins of about 8' average width, carrying oxidized and sulphide ores, former said to average 5% copper, 8 oz. silver and \$10 gold per ton, opened by shafts of 200' and 400', with about 8,000' of workings.

#### **RED RIVER COPPER CO.**

**NEW MEXICO.**

Mine office: Red River, Taos Co., N. M. Geo. B. Paxton, superintendent. Property is the Anaconda mine. Has steam power. Presumably idle.

**RED ROCK COPPER CO.**

ARIZONA.

Mine office: Tucson, Pima Co., Ariz. J. C. Perry, agent, at last accounts. Lands, 9 patented claims and a millsite. Idle several years.

**RED STAR MINING CO.**

WASHINGTON.

Mine office: Kalama, Cowlitz Co., Wash. Has auriferous copper ore and cinnabar. Idle several years.

**RED WARRIOR MINING CO.**

UTAH.

Office: Lonsdale Bldg., Duluth, Minn. Mine office: Milford, Beaver Co., Utah. W. A. Eaton, president; Lucifer Merritt, vice-president; Geo. W. Logan, secretary; H. L. Palmer, treasurer; preceding officers, Guy A. Eaton, John E. Merritt and Angus Buchanan, directors; T. W. Hunnibell, superintendent; R. Hightower, mine superintendent. Organized Jan. 25, 1907, under laws of Minnesota, with capitalization \$150,000, shares \$1 par.

Lands, 9 claims, area 98 acres, freehold, except 3 acres, held under option, in the Star district, 8 miles from a railroad, showing 2 acre bodies, occurring in bedding planes of limestone, of which one, with northeast and southwest strike and dip of 48°, of 6' estimated average width, is opened by numerous short tunnels and shallow shafts, with new shafts of 20' and 31½', property having about 1,200' of new workings and 3,000' of old workings, estimated to show 20,000 tons of ore, with about 10,000 tons blocked out for stoping. The average of 15 carloads, shipped late 1908, was 0.75% copper, 32.3% lead, 1.9% zinc, 11.28 oz. silver and 0.18 oz. gold per ton, with net returns of about \$1,000 per car. The mine is an old property, discovered 1870, and reopened 1907.

Equipment includes a 50-h. p. gasoline plant, with a 25-h. p. hoist and a-dred air-compressor. Company plans installing a 50-h. p. steam hoist and developing the second ore body.

**RED WING EXTENSION MINING CO.**

UTAH.

Dead. Title changed, circa March, 1906, to Massasoit Mining Co. Formerly at Bingham Canyon, Salt Lake Co., Utah.

**RED WING MINE.**

ALASKA.

Mine office: Ketchikan, Alaska. Capt. and Mrs. E. E. Wyman, owners and managers. Shipped a little ore to Tacoma, 1907.

**RED WING MINING & MILLING CO.**

UTAH.

Dead. Succeeded, circa 1900, by New Red Wing Mining Co. Formerly at Bingham Canyon, Salt Lake Co., Utah.

**REDWOOD COPPER QUEEN MINING CO.**

CALIFORNIA.

Letter returned unclaimed from former office, San Francisco, Cal. Mine office: Ukiah, Mendocino Co., Cal. W. P. Ferguson, president; Thos. Mellersh, secretary and treasurer. Lands, 840 acres, patented, 35 miles southeast of Ukiah, developed by tunnels and winzes. Vein, much broken by faults prominent on surface, has a 2' to 4' gossan capping, traceable for a mile. Country rocks are brecciated porphyry and sandstone. Ores include cuprite, malachite, azurite, chalcopyrite and tetrahedrite. Idle several years and apparently moribund.

**REED GOLD & COPPER MINING CO.**

VIRGINIA.

Dead. Formerly had an office in Norfolk, Va.

**REFORMA MINING CO.**

MEXICO.

Mine office: Campo Morado, Aldama, Guerrero, Mex. Eduardo Ortiz, manager. Lands, 1,000 hectares, showing 2 parallel zones, one carrying oxidized lead ores, said to give assays of 800 to 5,000 grams silver and 10 to 50 grams gold per metric ton. The second zone, said to be 40 meters wide, in places, carries an immense body of cupriferous pyrite, giving assays of 3 to 8% copper, with fair silver values. Has electric mine haulage. Smelter has two 25-ton lead furnaces, and it is planned to add a blast-furnace for copper, to be operated on the pyritic plan.

**REFORMA MINING CO.**

MEXICO.

Dead. Formerly at Fuerte, Sinaloa, Mex.

**REFUGIO SYNDICATE, LTD.**

MEXICO.

Office: 3 Princes St., London, E. C., Eng. Letter returned unclaimed from former mine office, La Cananea, Arizpe, Sonora, Mex. S. A. Bird, chairman; Henry H. Knox, consulting engineer; J. S. Dare, secretary. Organized Nov. 30, 1905, under laws of Great Britain, with capitalization £11,250, in 1,000 A shares and 10,000 ordinary shares of £1 par each, and 5,000 deferred shares of £1 par each. Lands, 6 groups of copper claims, area 382 hectares. Presumably idle.

**RHID-NEWFOUNDLAND CO.**

NEWFOUNDLAND.

Mine office: New Bay, Newfoundland. Donald McKenzie, superintendent. In 1907 was sinking a shaft planned to be 100' deep, for prospecting purposes.

**COMPANIA MINERA LA REINA.**

MEXICO.

Dead. Lands sold, circa 1907, to Mexican Mines Syndicate, Ltd. Formerly at Cusihuiriáchie, Iturbide, Chihuahua, Mex. Fully described Vol. VII.

**COMPANIA MINERA REINA DE COBRE.**

MEXICO.

Mine office: Ejutia, Oaxaca, Mex. Capitalization 100,000 pesos. Juan Butler, general manager; Juan de Peza, superintendent, at last accounts. Property is the Luna de Oaxaca mine. Presumably idle.

**MINA REINA DE COBRE.**

MEXICO.

Mine office: Alamos, Sonora, Mex. Alfredo R. Cano y Co., owners; Juan G. Cano, manager. Has auriferous and argentiferous copper ores.

**COMPANIA MINERA REINA DE COBRE DE SONORA.**

MEXICO.

Letter returned unclaimed from former office, Nogales, Sonora, Mex. Mine office: Santa Ana, Magdalena, Sonora, Mex. John Henderson, superintendent. Has auriferous and argentiferous copper ores. Has steam power, employing circa 30 men, at last accounts.

**REINA COPPER CO., LTD.**

SPAIN.

Office: 18 Walbrook, London, E. C., Eng. M. Graham, chairman. Organized Aug. 13, 1906, under laws of Great Britain, with capitalization £60,000, shares £1 par, to acquire copper mines in Spain. Presumably idle.

**REINDEER COPPER & GOLD MINING CO., LTD.**

IDAHO.

Office: 510 Bank St., Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. F. C. Norbeck, secretary; Norman Ebberley, manager. Apparently is a Siamese twin of the Reindeer Copper Mining & Milling Co., Ltd. Lands, 5 claims, on Willow Creek, said to have a vein carrying a paystreak of 16 to 21% copper tenor, with 3' to 8' of copper ore of concentrating grade. Is developing by a tunnel, driven jointly with Copper Queen Mining Co., planned to be 3,000' long. Has steam power and an air-compressor.

**REINDEER COPPER MINING & MILLING CO., LTD.**

IDAHO.

Office: 510 Bank St., Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. H. A. Keough, president; F. C. Norbeck, secretary. Apparently a Siamese twin of the Reindeer Copper & Gold Mining Co., Ltd., and impossible to tell "t'other from which."

**REINDEER MINING CO.**

IDAHO.

Dead. Succeeded by Reindeer Copper & Gold Mining Co., Ltd. Formerly at Mullan, Shoshone Co., Idaho.

**REINS COPPER CO.**

MONTANA.

Office and mine: 46 East Broadway, Butte, Silver Bow Co., Mont. Col. J. M. Guffey, president; John P. Reins and Asa Childs, vice-presidents; preceding officers, Wm. P. De Armit, Hon. John Miller, Frank J. Weixel, E. W. Marshall, Geo. W. Stapleton, W. W. McDowell, E. D. Leavitt and Guy Stapleton,

directors; W. F. Johnson, secretary and treasurer; G. B. Thompson, assistant secretary and treasurer; John Stewart, superintendent. Organized Apr. 27, 1903, under laws of Montana, with capitalization \$1,500,000, increased, 1907, to \$3,000,000, shares \$1.50 par.

Lands, 3 fractional claims, area 18 acres, known as the Betsy Dahl or Combination; Ella and Louise, in the Meaderville district, just at the eastern end of Butte. Mine was idle, 1881-1902, on account of litigation. Property, though small, is considered valuable, being excellently located, near the Leonard and Colusa mines of the Boston & Montana, and supposed to carry the extension of the Leonard vein, also lying near the Minnie Healy mine of the Butte Coalition.

The Combination shaft is 1,200' deep, with north and south crosscuts on the 1,200' level, and it is planned to deepen this shaft to 2,000', but the ground is broken and wet, rendering sinking slow and costly. The shaft has 2 compartments, and is planned to be cut down to 3-compartment size. The Combination mine has shown some good argentiferous copper and lead ores, including chalcopyrite, assaying up to 60% copper and 200 oz. silver per ton.

The Ella mine has an 800' shaft, filled with water, said to have produced about \$500,000 worth of ore, and it is planned to develop the Ella ground through the Combination shaft, on the 1,200' level.

Equipment includes a 240-h. p. steam plant, with a hoist good for 2,000' depth, 5-drill air-compressor and two 700-gallon pumps; on the 800' and 1,200' levels.

Production, for the Montana mining year ending June 1, 1907, was 2,061 tons of ore, averaging 4.7% copper, yielding 96,867 lbs. fine copper. Property is said to have shipped about \$100,000 worth of ore, from development work. The company's finances became badly tangled, early 1908, when upwards of 100 claims, aggregating about \$110,000, were made liens and attachments on the property. Property is considered valuable, though company's finances are in poor shape.

#### **RELIANCE GOLD & COPPER MINING CO.**

**ARIZONA.**

Office: 15 Brown Palace Hotel, Denver, Colo. Mine office: Turkey, Yavapai Co., Ariz. C. S. McElrath, president; E. J. Price, vice-president; H. G. Trester, secretary; W. D. Webster, superintendent. Organized January, 1904, under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Was promoted by Herbert S. Shaw. Lands, 11 claims, area 220 acres, in 2 groups, in the Big Bug district, circa 10 miles from a railroad; opened mainly by tunnel, showing auriferous and argentiferous copper ore of uncertain tenor. Idle since circa 1904, and apparently moribund.

#### **RELIANCE GOLD MINING CO.**

**ARIZONA.**

Dead. Formerly at Groom Creek, Yavapai Co., Ariz. Described Vol. VI.

#### **RELIANCE GOLD MINING CO.**

**NEW MEXICO.**

Office: 262 Washington St., Boston, Mass. Letter returned unclaimed from former mine office, Albuquerque, Bernalillo Co., N. M. Arthur S. Percy, president; Walter Haynes, secretary and treasurer; preceding officers, J. E. Baker, Harry Owens, A. H. Drummond and Geo. F. Ropes, directors; W. S. Baker, fiscal agent. Capitalization, \$250,000, shares \$1 par. Company claimed to be paying regular monthly dividends, at rate of 8% yearly, on the 25th inst. of each month.

Lands, 9 claims, 20 miles from Albuquerque, said to be in the heart of the richest mineral zone of the continent, which is untrue, and the company is viewed with deep suspicion.

#### **RELIANCE MINING & MILLING CO.**

**NEVADA.**

Office: 1410-124 Monroe St., Chicago, Ills. Mine office: Tenabo, Lander Co., Nev. Lands, 19 claims, 2 fractional, area 355 acres. Principal develop-

ment is on the Little Gem group, one mile from Tenabo, showing a contact deposit between rhyolite and sedimentary rocks, carrying auriferous and argentiferous copper carbonates and chalcopyrite, with quartz gangue. Has a 250' incline shaft, sunk at an angle of 22°, showing an ore body ranging from a few inches to 5' in width, giving assays up to 31.1% copper, 122 oz silver and \$9.60 gold per ton.

#### **RELIANCE MINING & MILLING CO.**

#### **PENNSYLVANIA.**

Office: Lancaster, Pa. Mine office: Hunterstown, Adams Co., Pa. Presumably idle.

#### **RENDALL ORE REDUCTION CO.**

#### **ARIZONA.**

Office: 16 State St., Boston, Mass. Mine office: Gila Bend, Maricopa Co., Ariz. Chas. S. Ashley, president; Leonard L. Allen, vice-president; H. Carlton Slack, secretary; A. M. Lee, superintendent.

Property is the Ajo mine, an antigua, opened A. D. 1768, and reopened circa 1861, when native copper and considerable rich ore, said to have been worth \$300,000, was shipped to San Francisco and Swansea. Property is hampered by lack of rail transportation. Mine has a 150' shaft, showing ore of good average tenor. During idleness of mine considerable regulus was produced by deposits on old rails and pipes.

Reduction plant, rated at 50-ton daily capacity, uses the Bendall process, which is claimed to treat, with equal facility, all classes of copper ores, including oxides, carbonates, sulphides, chloride, silicates and arsenides, and it is claimed that average ores can be treated at cost of \$1 per ton, with extraction of 95 to 98% of values, which claims seem very sweeping. The plant has a special upright furnace, practically air-tight, with suction draft operating above the charge. Ore is heated to low incandescence by gases from wood, coal or oil, and at a proper degree of heat the combustion draft is increased, fuel supply shut off, and a specially fluxed hot blast admitted to furnace, causing chemical reactions by which the volatile elements are said to be drawn off. The special fluxing gas is said to prevent oxidation, carbonization or chlorination of the ores, and it is claimed that copper, gold and silver are left in suspension, as the gangue rock of quartz or limestone is not fused. It is difficult to understand just what is volatilized, if neither metals nor gangue rock are fused, and the utility of the volatilization process is not apparent. After volatilization, the ore is plunged into a vat containing water, which is said to shock the gangue, and assist in breaking it up. Ore is then passed through a set of rolls, crushed fine, and copper ore concentrated or treated by an astra or Chilean mill, if containing high gold or silver values.

#### **RENO-YERINGTON COPPER CO.**

#### **NEVADA.**

Mine office: Yerington, Lyon Co., Nev. S. H. Baker, manager. Lands, north of the Bluestone, have a 700' tunnel, 200' of which is said to show a vein of 8' average width, carrying ore of 3 to 4% copper lead. Presumably idle.

#### **REPUBLIC CONSOLIDATED MINING & MILLING CO.**

#### **COLORADO.**

Dead. Formerly at Idaho Springs, Clear Creek Co., Colo.

#### **REPUBLIC MINES CO.**

#### **NEW MEXICO.**

Office: 396 Exchange Bldg., Denver, Colo. Mine office: Lucero, Mora Co., N. M. Felix J. Woodward, president; Walter Littlefield, vice-president; Marcus Finch, secretary, treasurer and general manager. Organized Dec. 8, 1903, under laws of Colorado, with capitalization \$500,000, shares \$1 par; issued, \$490,000.

Lands, circa 7,500 acres, patented, half freehold and half held under bond and lease, known as the Constitution group, 30 miles from a railroad, stretching for 8 miles along Coyote Creek, from Mold River to the adjacent mountains, showing a series of 3 parallel cupriferous beds of slate and arenaceous shale, alternating with limestone, having an approximately meridional strike.

The property has upwards of 120 openings, mainly shallow pits, showing copper, principal workings being a 50' shaft and several tunnels, longest 650'. The 3 main beds are of 2' to 8' thickness, with 3 minor ledges, said to show considerable chalcocite, presumably in connection with oxidized ores, giving average assays of 8 to 17% copper, with an estimated average ton of 6%. Company plans building a small smelter with a reverberatory furnace.

**REPUBLIC MINING CO.** ARIZONA.

Mine office: Johnson, Cochise Co., Ariz. Lands: 19 claims, including the Old Republic mine, having a 350' shaft, the Republic Extension mine, with shafts of 50', 75' and 150', and the Mammoth mine, having incline shafts of 150' and 400'. Property shows arseniferous and argentiferous sulphides, up to 15% in copper tenor.

**REPUBLIC SMELTING CO.** COLORADO.

Office and works: Leadville, Lake Co., Colo. Capitalization \$600,000. Property is the remodeled 500-ton smelter, with 3 furnaces, formerly owned by the Boston Gold-Copper Co. Presumably idle.

**RESCUE COPPER CO.** ARIZONA.

Dead. Merged, Feb. 19, 1907, in Cornelius Copper Co. Formerly at Gila Bend, Pima Co., Ariz. Described Vol. VII.

**RESERVATION MINING & SMELTING CO.** WASHINGTON.

Dead. Lands sold, circa 1907, to Dominion Copper Co., Ltd. Formerly at Danville, Ferry Co., Wash.

**RESOLUTE COPPER CO.** MICHIGAN.

Dead. Wound up. Lands sold, 1905, to Keweenaw Copper Co. Formerly at Central Mine, Keweenaw Co., Mich. Fully described Vol. II.

**MINA LA REVANCHE.** MEXICO.

Mine office: Ojocaliente, Zacatecas, Mex. J. Iniciacion Spina, owner; R. Spina, manager. Has argentiferous lead and copper ores, with a Chilean mill and steam power.

**REVENUE MINING CO.** ARKANSAS, UTAH & WASHINGTON.

Dead. Formerly in Stevens county, Washington. Described Vol. VII.

**REVENUE MINING & MILLING CO.** WYOMING.

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. VI.

**RWARD COPPER MINING CO.** ARIZONA.

Dead. Lands sold; Oct. 15, 1903, to United Arizona Copper Co., Ltd. Formerly at Vekol, Pinal Co., Ariz.

**RWARD GOLD-COPPER MINING CO.** BRITISH COLUMBIA.

Letter returned unclaimed from former office, Spokane, Wash. Mine office: Princeton, Boundary district, B. C. W. C. Lyall, attorney. Organized 1906, with capitalization \$1,000,000, shares \$1 par. Idle and apparently moribund.

**REXALL SILVER & COPPER MINING CO.** UTAH.

Mine office: Alta, Salt Lake Co., Utah. Lands are on the south fork of the Big Cottonwood.

**REX COBRE MINING CO.** ARIZONA.

Office: Muskegon, Mich. Mine office: Safford, Graham Co., Ariz. Dr. B. D. King, president; J. B. Barlow, secretary and treasurer. Organized 1908, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 20 claims, area 320 acres, in the Lone Star district, showing fissure veins, developed by a 2-compartment incline shaft of 540', with 700' of underground openings. Has a 28-h.p. steam hoist. Idle several years.

**REX GOLD MINES & INVESTMENT CO.** COLORADO.

Mine office: Leadville, Lake Co., Colo. Jesse F. McDonald, manager. Lands include the Battler and Reconstruction mines, carrying gold, silver, lead and copper ores. Has steam power. Presumably idle.

**REY DEL ORO MINING CO.****MEXICO.**

Mine office: Mulatos, Sahuaripa, Sonora, Mex. Is controlled, through entire stock ownership, by the Greene Gold-Silver Co. Property is the Mulatos mine.

**COMPAÑIA MINERA LOS REYES.****MEXICO.**

Mine office: Zitácuaro, Michoacán, Mex. Rafael Rodriguez Gil, manager, at last accounts. Has a tunnel, showing copper ore. Presumably idle.

**REYNOLDS-ALASKA DEVELOPMENT CO.****ALASKA.**

Office: 43 Exchange Place, New York, N. Y. Mine office: Valdez, Prince William Sound district, Alaska. C. M. Baldwin, president; Percy Brundage, vice-president; Hon. John G. Brady, secretary; J. Frank Birdsell, treasurer; preceding officers, Horace E. Kistler, E. T. Teter, D. B. Hawes, O. W. Cobb, Quar J. Humphrey, A. E. Austin, H. M. Coffin, Chas. H. Kingsbury, J. J. Blackmore and W. S. Burrows, directors; Blamey Stevens, engineer; J. W. Spaulding, superintendent. Organized 1903, under laws of Washington, with capitalization \$3,000,000, shares \$1 par, in \$1,000,000 cumulative 6% preferred and \$2,000,000 common shares; issued, \$2,632,906. Bonds, \$500,000, twenty-year 6% gold bonds, authorized March 3, 1908; issued, none. Company paid dividends, to Oct. 1, 1908, of \$38,644.72 on preferred stock, which was wrong, as the company was not in a position to earn any dividends. Company is said to have offered to pay 6% on preferred stock, from date of issue, and 6% on common shares thereafter. In March, 1908, the company had an indebtedness of circa \$280,000. Washington Trust Co., Boston, registrar; Beacon Trust Co., Boston, transfer agent. Annual meeting, first Tuesday in April.

The Reynolds string of promotions included companies formed to carry on a great variety of businesses, including hotels, a dray-line, newspaper, building construction, smelting, laundering, merchandising, and the sale of musical instruments and sheet-music. Company controls the Copper River Lumber Co., with sawmills and yards at Valdez, and also holds, at Valdez, 39 parcels of real estate, including various hotels, warehouses, dwellings, etc.

Lands, 62 claims, area circa 1,200 acres, patents applied for, also an 80-acre millsite and 6,000 acres of coal and oil lands, in several different groups, in 2 different localities in the Valdez district. The coal and oil lands are not productive. The various properties show slate, greenstone and porphyry, carrying various contact deposits between slate and greenstone.

The Boulder Bay group, 23 claims, area 400 acres, on the Kenai peninsula, shows a contact deposit between greenstone and slate, carrying chalcopyrite, assaying up to 11% copper and \$3 gold per ton, but probably averaging 2 to 4% in copper tenor, developed by 2 tunnels. Equipment includes a 60-h. p. boiler and a 5-drill Rand air-compressor.

The Aurora mine, at Kachemak Bay, Cook Inlet, is a gold property, where considerable money was spent, and apparently little ore found. At one time a mill was planned for this property.

The Latouche Iron Mountain group, 20 claims, includes the Duchess and Blue Fox properties, on the west coast of Latouche Island, circa 60 miles west of Boulder Bay. The Blue Fox mine has a 4' vein of ore, of about 7% estimated copper tenor, which it was planned to develop by shaft. The Duchess mine, opened by tunnel, shows ore of low grade, but in larger quantities than found in the Blue Fox, having a vein estimated by company as of 100' width, traceable circa 700'. Another authority states that there is an ore zone up to 250' in width, traceable nearly one mile. Development is by tunnel and crosscuts, showing a large body of low grade copper ore, intersected by several high grade ore bodies.

Equipment includes a 200-h. p. hydro-electric installation, with a flume and steel pipe leading from Big Falls Creek to a Pelton wheel, direct-connected to

two 40-kw. generators. There is a 50-h. p. hoist and 2 Rand air-compressors, of 5 drills aggregate capacity, with 6 air drills and 10 Ingersoll-Temple electric drills.

Improvements include a sawmill, electric light plant, 3 steamers, a store, bank, hotel and barber-shop.

The company is giving tentative consideration to the erection of a 1,000-ton smelter. The management estimates that the mine should have a mean probable ore capacity of 3,000,000 tons.

Henry D. Reynolds was arrested, April, 1908, on a secret indictment returned against him by a Federal grand jury in Massachusetts, for using the mails to defraud, but wrote, Apr. 28, 1908, stating that he had just resumed control of the company and its subsidiary corporations, including the Alaska Home Railway and 13 other companies comprising the so-called Reynolds-Alaska system. The company, together with its associated bank, railroad and industrial enterprise, came to grief financially, 1907, but seems to have improved its financial position during 1908.

#### REYNOLDS MINE.

Mine office: South Strafford, Orange Co., Vt. J. B. Reynolds, manager and principal owner. Lands, 900 acres, held under deed of mining rights, near the Elizabeth mine, 13 miles from Boston & Maine railroad, showing gneiss, mica-schists and hornblende-schists, carrying lenticular ore bodies in series conforming to dip of the country rocks, under garnetiferous mica-schist and above hornblende-schist, with strike of West of North, and average dip of about 45°. One ore body, of 40' extreme width, not mineralized for full width, traceable circa 4,000' on the property, shows chalcopyrite disseminated in pyrrhotite, giving average assays above 3% copper. Development is by a 110' incline shaft, with about 70' of workings on the 100' level.

Equipment includes steam and air power, with a 3-drill compressor and several mine buildings.

#### RHEINBACH COPPER MINES, LTD.

#### GERMANY.

Office: 5 Copthall Bldgs., London, E. C., Eng. Mine office: Rheinbach Kreis Brühl-Uncel, Rheinprovinz, Germany. Oliver Wethered, chairman; A. Eick, manager; C. Acton Dodds, secretary. Organized May 11, 1907, under laws of Great Britain, with capitalization £150,000, shares £1 par; issued, £100,007. Lands, 437 hectares, showing copper, lead and zinc sulphides, opened by 2 shafts.

#### RHENOSTERKOP COPPER SYNDICATE.

#### CAPE COLONY.

Mine office: Kakamas, Kenhardt district, Cape Colony. Capitalization £20,000. Lands, 19,000 morgen, area circa 46,000 acres; known as the Farm Rhenosterkop, on the southern bank of Orange river, circa 72 miles west of the town of Kenhardt, held under 17 months option. Property shows copper veins, between gneiss and schist, with northeasterly and southwesterly strike. Principal vein, with vertical dip, opened to shallow depth only, is 3" wide at the surface, gradually increasing to 4", carrying high grade carbonates, oxides and chalcoelite. The veins, as developed, are trivial in width, but are rich and apparently worthy of further tests.

#### RHODE ISLAND COPPER CO.

#### MICHIGAN.

Office: 1000-32 Broadway, New York, N. Y. Mine office: Hancock, Houghton Co., Mich. Employs 25 men. Chas. J. Devereaux, president; Wm. R. Todd, secretary and treasurer; preceding officers, Stephen R. Dow, Chester L. Dane, S. L. Lawton, Isaac H. Meserve and Jas. S. Dunstan, directors; M. H. Dennis, superintendent. Organized 1898, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; paid in, \$10. Last assessment was \$1, due Jan. 14, 1907. Statement, as of date Jan. 1, 1908, showed cash on hand, \$58,216.51, with total quick assets of \$63,672.89, and total accounts payable of \$2,717.43.

Lands, 800 acres, north of the Franklin Junior, on which extensive diamond drill borings have been made, giving drill cores from the Mesnard epidote, Kearsarge amygdaloid, Allouez conglomerate, Pewabic amygdaloid and other copper-bearing beds.

No. 1 shaft, 275' north of the Franklin Junior boundary, is 8x18' in size, with 3 compartments, 500' deep, sunk on the Pewabic amygdaloid, which is 8' to 10' wide, with 2' to 3' near the hanging-wall well mineralized, at points. This shaft, abandoned 1902, is filled with water, to the first level, on which it connects with No. 2.

No. 2 shaft, 1,200' north of No. 1, also is 8x18' in size, and is circa 1,300' deep, at the 10th level. This shaft has east and west crosscuts, and a crosscut, driven 180' east, encountered the Allouez conglomerate, March, 1903, but work thereon was discontinued, July, 1904, owing to poor showing secured. The east crosscut, on the 8th level, at depth of 1,000', cut 2 apparently valueless amygdaloidal beds, one being the Mesnard epidote lode. The East lode, about 5' wide, carries a little copper, but nothing especially encouraging. The West lode, 96' from the shaft, is 7' to 9' wide, carrying occasional bunchy copper. The 4 amygdaloidal beds lying between the West lode and the Allouez conglomerate have been tested by north and south drifts, 3 proving barren. On the 9th level a 6' vein shows about 35' of good copper ground, but the showing on the level below is poor. The south drift on the Pewabic lode, on the 8th level, is said to develop a good stretch of copper ground, in a 600' drift toward the Franklin Junior. The Pewabic lode was explored, 1906-1908, by drifts, on various levels, a 1,400' drift on the 8th level north showing occasional 25' to 75' stretches of payable ground. No. 2 has a frame shafthouse, and a Nordberg hoist capable of raising 2-ton skips from a quarter-mile depth.

No. 3 shaft, 1,800' north of No. 2, was started May, 1905, but work was discontinued at slight depth, and attention turned to diamond drilling, to locate the Kearsarge bed. The first cores from the Kearsarge lode shewed copper, in somewhat encouraging quantities, from a bed of circa 19' width.

Surface improvements include a 30x60' machine and blacksmith shop, a 30x50' frame warehouse and 15 dwellings. No. 2 engine-house has a 12-drill Rand air-compressor.

It is possible that the Rhode Island may be absorbed by the Franklin, as negotiations to that end were under way, late 1908. The Rhode Island has given very discouraging results, for 10 years of conscientious effort.

#### RHODESIA COPPER CO., LTD. .... RHODESIA.

Office: Salisbury, House, London, E. C., Eng. Mine office: Bulawayo, Rhodesia. Lord Gifford, chairman; Bechuanaland Exploration Co., Ltd., manager in South Africa; F. White and Percy Tarbutt & Co., consulting engineers; Tom Donald, secretary. Organized Jan. 31, 1902, under laws of Great Britain, with capitalization £750,000, shares £1 par. Company has floated the Rhodesia Broken Hill mine, a zinc and lead property, and paid a 10% dividend to shareholders, 1905, in the stock of that corporation:

Lands, 640 square miles, and the right to locate 8,000 mining claims and 33 farms, in northern Rhodesia, of which 5,665 mining claims and 24 farms had been located, at last accounts. The company has a close working alliance with the Northern Copper (B. S. A.) Co., Ltd., and apparently both companies have some sort of interest in the Ewana M'Kubwa, and Hippo mines, which are described under title of Northern company. The Kitakata mine, one-half mile northeast of the Broken Hill property, shows stains and hand specimens of oxide and carbonate copper ores.

#### JUAN DE O. BIBILLO.

Mine office: Carrizalillo, Chafarral, Antofagasta, Chile. Property is the

CHILE.

Yatesito mine, which, 1908, produced 850 metric tons of ore averaging 15% copper, equivalent to about 275,000 lbs. fine copper.

**RICHARD III DEVELOPMENT CO., LTD.** BRITISH COLUMBIA.

Office: Duncans, B. C. Mine office: Mt. Sicker, Vancouver Island, B. C. Lands, east of the Tyee are opened by a 510' two-compartment shaft, with 2,181' of workings on 5 levels, having ore on each level, with considerable ore of good average tenor in sight. Best ore is on the bottom level, a sample ton smelted giving returns of 3.29% copper, 25.85 oz. silver and 0.66 oz. gold per ton. Has shipped considerable ore to the Tyee smelter, and paid, 1907, a 2½% dividend.

**RICHFIELD COPPER CO.**

MEXICO.

Office: 1410 H St., Washington, D. C. Mine office: Querobabi, Ures, Sonora, Mex. Dr. S. T. Haffner, president; Maj. Jas. A. Cooper, vice-president; Dalbys L. Fickes, secretary and treasurer; Stewart Ellis, general manager; John Glasson, superintendent. Organized 1908, as successors of Richfield Mining Co., which was organized May, 1901, under laws of Arizona, with capitalization \$5,000,000, shares \$2 par. Old company had a \$100,000 bond issue, at 6%.

Lands, 382 pertenencias, area 955 acres, in 2 groups, including the IDNA Naciones group, 12 miles east of Tuape, down the San Miguel river, and 35 miles from a railroad. Also has 26,512 acres of timber lands, in the Ures district. The Dos Naciones group, having traces of antigua workings, is said to show 7 contact veins, between granite and limestone, of 16' to 40' estimated average width, opened by shafts of 73' and 75', and by tunnels of 48' and 60', showing oxidized ores and chalcopyrite assaying 3% copper and 20 to 60 oz. silver per ton, with small gold values. Is said to have a body of high grade ore at depth of 350'. Has a 120-h. p. steam plant, with two 200-lb. boilers and a 4-drill air compressor, and several mine buildings. Camp was raided by Yaqui Indians, 1907, whereupon the Mexican workmen left, and mine was closed down.

**RICHFIELD MINING CO.**

MEXICO.

Dead. Succeeded, 1908, by Richfield Copper Co. Formerly at Querobabi, Ures, Sonora, Mex. Described Vol. VI.

**RICHMOND-EUREKA MINING CO.**

NEVADA.

Office: 114-25 Broad St., New York, N. Y. Mine office: Eureka, Eureka Co., Nev. Albert Fries, president; W. H. Coddridge, vice-president; A. J. Seigerman, treasurer; A. F. Holden, managing director; A. P. Mayberry, mine superintendent. Organized October, 1905, under laws of Maine, with capitalization \$3,600,000, shares \$20 par, as a merger of Richmond Mining Co. and Eureka Consolidated Mining Co., which were in litigation, thus reconciling the conflicting interests. The Richmond Mining Co. paid dividends of about \$5,000,000, from 465,297 tons of ore produced. The United States Smelting, Refining & Mining Co. owns circa 35% of the capital stock authorized, which is about 48% of outstanding stock, and names one of the 3 members of the voting trust.

Lands are said to be circa 700 claims, including the old Richmond and Eureka mines, contiguous properties, opened circa 1869, which were large ore producers, but were tied up by litigation for some years, until formation of present company, during which time mines were idle, except for extensive scrapping, done by tributaries. Under former ownership mines were highly productive and profitable. Ore values are mainly in silver and lead. The Eureka mine is opened by the 900' Lecan shaft and the Econ incline, with development mainly below the 1900' level. The Richmond mine is developed principally through the Lézette tunnel, the old bonanza ore bodies apparently not continuing below the 600' level. Ore bodies developed, while low in grade, possibly may turn into higher grade ore. Equipment includes a good mining

plant and an antiquated smelter, at Eureka, 8 miles from the mines, which has been idle for some years. Company has secured the very reasonable freight rate of \$2.75 per ton to Salt Lake smelters, for ore averaging less than \$12 per ton in gross values, and, early 1908, was shipping circa 200 tons daily. Property considered valuable and management good.

#### RICHMOND GROUP GOLD MINES CO.

NEW MEXICO.

Dead. Formerly at Hillsboro, Sierra Co., N. M.

#### RICHMOND MINE.

MONTANA.

Mine office: Saltese, Missoula Co., Mont. Chas. J. Heidenreich, manager. Lands, 6 claims, southwest of Saltese, adjoining the Monitor mine, opened by 4 shafts, deepest 275', on a vein parallel to the Monitor, showing frequent occurrences of native copper, and auriferous copper ores of good average assay values. The property has been a small producer for some years, and is said to have been worked at a profit.

#### RICHMOND MINING CO.

NEVADA.

Dead. Merged, October, 1905, in Richmond-Eureka Mining Co. Formerly at Eureka, Eureka Co., Nev.

#### RICKARD-ELY COPPER CO.

NEVADA.

Letter returned unclaimed from former office, 20 Broad St., New York, N. Y. Mine office: Ely, White Pine Co., Nev. G. L. Rickard, president; Webster Bishop, vice-president; Joe H. Hutchinson, second vice-president; W. A. B. Ogden, secretary; Herbert T. Cook, treasurer. Organized circa February, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 5 claims, adjoining the Veteran-Ely on the west, slightly prospected, 1907, by churn drilling. Idle at last accounts.

#### RIDGE COPPER CO.

MICHIGAN.

Office: 1105-6 Beacon St., Boston, Mass. Mine office: Mass, Ontonagon Co., Mich. Organized October, 1863, under laws of Michigan, with capitalization \$500,000, shares \$25 par. Has levied assessments of \$470,000, and paid dividends of \$100,000. Practically entire stock issue is owned by Mass Consolidated Mining Co., and it is planned to wind up the corporation and transfer its landed holdings to the Mass.

#### CÁRLOS RIESCO.

CHILE.

Office and works: Tilitl, Santiago, Chile. Property is the Tilitl smelter, having railroad connection. Works have two 55-h. p. boilers and three 60-h. p. engines, with Blake crusher and two Cornersville blowers. Smelter has 1 calcining furnace and 2 water-jacket blast-furnaces. Fuel is Chilean coke, costing 25.5 pesos, and coal, costing 22.3 pesos, per metric ton. Slags average about 0.5% copper. Employs about 35 men, at average wages of 1.8 pesos daily. In 1903 treated 4,850 metric tons of ore averaging 6.5% copper, producing 650 metric tons of ejes, of about 45% average tenor, containing circa 650,000 lbs. fine copper.

#### RIGBY MINING & REDUCTION CO.

ARIZONA.

Office: Beaver Falls, Pa. Works office: Mayer, Yavapai Co., Ariz. Col. T. Johns Rigby, president and general manager; F. H. Walker, secretary and treasurer; preceding officers, R. D. Mead, L. S. Neely and Edward C. Fink, directors; A. W. Hudson, manager; Harry A. Clarke, superintendent.

Property is a custom smelting plant, on a 20-acre site, near Mayer, connected by a 3,000' spur with the Prescott & Eastern Railway.

This company holds the Yavapai county rights to the Poehle & Crookland volatilization process, and has a 125-ton reduction plant, blown in, April, 1906. The process of reduction is as follows: from the receiving bins, ore is taken in tram-cars to 2 revolving dryers, one of 40' diameter by 18' length and the other of 60' diameter by 26' length, heated ore passing from them, by gravity, to cars, which take it to the feed-hoppers in the roll-house, latter having 3

sets of 30x14" rolls and 1 set of 20x12" rolls, with screens and elevators. Dust from rolls is collected by 3 large dust-collectors. Crushed ore is taken from the screens to a 40-ton ore-bin in the mixing house, by an 84' automatic belt-conveyor. In the mixing-house, ore and salt from the salt-bins are weighed by 2 sets of hopper scales, and deposited on a 50' belt-conveyor, which takes the material to a box-mixer, whence the mixed charge is dumped into a car which takes it to 4 feed-hoppers, which feed the charges automatically to revolving furnaces, in a furnace building 88x132' and 40' high, having four 25-ton revolving calcining furnaces. Fumes from the ore are drawn from the furnaces through the flue-house, which contains 4 sets of 3' wrought-iron pipe, each 175' long, into the condensing house, by 4 large blowers, each capable of handling 8,600 cubic feet of gas per minute. Fumes are cooled by water, in the flue-chamber, then forced under pressure into the condensing room, where deposited as chlorides, condensing-room fumes going to the filtration room, where all insoluble matter is filtered, and where metallic values are precipitated, either by electric action, or on iron. Precipitates are melted and refined in the ordinary manner. The residue of the roasted ore, from which the metallic values are supposed to have been volatilized, is carried to the tailings dump, in tram-cars. The theory of the process is that the application of heat to the mixture of ore, salt and sulphur, causes a chemical reaction, by which the sulphur and sodium chloride form sulphate of soda, the chlorine from the salt uniting with the metals to form chlorides, which pass off in the fumes, and are recovered in the manner previously explained.

The company has made several smelter tests in the past few years, all pronounced satisfactory by the management, but apparently has secured no regular production, and the success of the process seems doubtful.

**BILLITO MINING CO.****ARIZONA.**

Letter returned unclaimed from former mine office, Tucson, Pima Co., Ariz. Idle and apparently moribund.

**RINCON MINES CO.****ARIZONA.**

Office: North American Bldg., Philadelphia, Pa. Mine office: Congress Junction, Yavapai Co., Ariz. W. C. De Armond, president; S. S. White, vice-president; Edw. P. Vogel, secretary and treasurer. Organized January, 1904, under laws of Arizona, with capitalization \$1,200,000, shares \$1 par, in \$200,000 cumulative 7% preferred stock and \$1,000,000 common stock. Lands, 31 claims, area 570 acres, in the Weaver district, showing auriferous and argentiferous copper and lead sulphides.

**RINCON MINING CO.****ARIZONA.**

Office: care of B. J. O'Reilly, secretary, Bisbee, Ariz. Mine office: Benson, Cochise Co., Ariz. Organized under laws of Arizona, with capitalization \$2,500,000, shares \$25 par. Lands, 27 claims, 22 miles north of Benson, developed by a 130' tunnel, showing ore giving assays up to 23% copper. Presumably idle.

**RINGING ROCKS COPPER MINING CO.****PENNSYLVANIA.**

Mine office: Pottstown, Montgomery Co., Pa. Idle several years.

**RING VALLEY MINING CO., LTD.****TASMANIA.**

Office: Finsbury House, London, E. C., Eng. Mine office: Williamsford, Dundas Co., Tasmania. H. T. Walker, chairman; H. St. John Hodges, secretary; Geo. Barker, mine manager. Organized July 20, 1900, under laws of Great Britain, with capitalization £125,000, shares 10s. par. Lands, 370 acres, leasehold, on the Ring river. Is a small shipper of argentiferous copper ore, employing about 10 men.

**RIO ARRIBA CONSOLIDATED MINES CO.****NEW MEXICO.**

Dead. Formerly at Tres Piedras, Taos Co., N. M.

**RIO BACANOCHI MINING CO.**

MEXICO.

Letter returned unclaimed from former mine office, Bacanochi, Arizpe, Sonora, Mex. Property shows copperiferous copper and silver-lead ores. Sundry ore shipments were made, 1907.

**RIO BLANCO SMELTER.**

PERU.

Owned by Peruvian Mining, Smelting & Refining Co.

**COMPANIA MINERA RIO COLORADO.**

CHILE.

Office: Santiago de Chile. Mine office: Victoria, Santiago, Chile. Organized Dec. 12, 1906, under laws of Chile, with capitalization 300,000 pesos, shares 20 pesos par.

**RIO DOLORES COPPER CO.**

UTAH.

Office: 731 East 18th Ave., Denver, Colo. Mine office: Castleton, Grand Co., Utah. Employs circa 10 men. C. L. Dyer, president; Victor Elliott, vice-president; Col. Thos. B. Crawford, secretary, treasurer and general manager; Wm. Eastman, superintendent. Organized Feb. 8, 1906, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Annual meeting, first Thursday in July.

Lands, 15 claims, area 300 acres, also 100 acres in millsites, on Mineral Mountain, at the head of Castle Creek, 6 miles above Castleton, in the La Sal district, showing mainly granite, with porphyritic intrusions, said to carry 12 ore bodies, of which 2 are slightly developed by tunnels, a 250' tunnel being said to show a 3' vein of high grade auriferous and argentiferous copper ore, estimated to average 2 to 3% copper, 10 oz. silver and \$3 gold per ton. Ores are mainly lead and copper sulphides. Equipment includes a 5-drill air-compressor and 6 log buildings. The company was promoted by Fred G. Shaffer, whose reputation is bad, but Col. Crawford, now in charge, is said to be an experienced mining man.

**RIO DOLORES MINING CO.**

COLORADO.

Office: care of W. K. Cowan, treasurer, Chicago, Ills. Mine office: Rico, Dolores Co., Colo. Lands, 2 miles north of Rico, are said to show a 3' vein carrying up to 8% copper.

**SOCIETE DES MINES DE CUIVRE ET DE**

SPAIN.

**PLOMB DE RIO FARDIS.**

Mine office: Molinillo, Ciudad Real, Spain. Organized August, 1903, under laws of France, with capitalization 2,500,000 francs, shares 250 f. par, to develop argentiferous lead and copper properties, near Molinillo. Idle.

**COMPANIA MINERA RIO GRANDE Y DOLORES DE LONDRES.** MEXICO.  
Office: 37 Old Jewry, London, E. C., Eng. Mine office: Guadalupe, Rio Grande, Coahuila, Mex. A. T. MacSwinney, manager. Property is La Nave mine, carrying argentiferous copper ore, with values mainly in silver. Has steam and water power, with a 20-ton mill and leaching plant, employing circa 75 men.

**RIO GRIO DISTRICT COPPER CO. (TOBED & CODOS EXPLORATION), LTD.**

SPAIN.

Dead. Title changed, January, 1907, to Aragon Copper Mines, Ltd. Formerly at Eglos, Zaragoza, Spain.

**RIO HONDO COPPER CO.**

NEW MEXICO.

Dead. Property sold, circa 1900, to San Cristobal Copper Co. Formerly at Arroyo Seco, Taos Co., N. M.

**RIO LUNA MINES CO., LTD.**

SPAIN.

Dead. Formerly at Campo La Lomba, Leon, Spain. Described Vol. VI.

**SOCIETE DES MINES DU RIO MURTIKA.**

SPAIN.

Office: 84 Rue de Provence, Paris, France. Mine office: Encinasola, Huelva, Spain. Organized Jan. 7, 1904, under laws of France, with capitaliza-

tion 67,680 francs, shares 250 francs par. Property is the Santo Domingo and Santa Isabel mines. Presumably idle.

**RIO NEGRO MINES, LTD.****SPAIN.**

Office: 6 Suffolk St., Pall Mall, London, S. W., Eng. Mine office: Campo La Lomba, León, Spain. Alfred DuCros, chairman; W. T. Cunningham, secretary. Organized Aug. 2, 1893, under laws of Great Britain, with capitalization £200,000, shares £1; issued, £235,007. Debentures, £15,000 authorized; £14,000 issued. Lands, 8 claims. Idle several years and apparently moribund.

**RIO RIMAL COPPER CO., LTD.****SPAIN.**

Dead. Wound up August, 1905. Formerly at Figueras, Gerona, Spain. Described Vol. VI.

**RIO TAMBO DEVELOPMENT SYNDICATE, LTD.****PERU.**

Office: 4 Broad Street Place, London, E. C., Eng. Mine office: Arequipa, Perú. Capt. W. B. McTaggart, J. P., chairman; E. J. Summers, secretary; Gerald V. Hopkins, manager. Organized Aug. 26, 1905, under laws of Great Britain, with capitalization £15,025, in 15,000 shares of £1 par and 500 founders' shares of 1s. par. Property is gold and copper claims near Arequipa.

**RIO TENIDO COPPER MINES, LTD.****SPAIN.**

Dead. Voluntarily liquidated, April, 1903. Formerly in Huelva, Spain.

**MINAS DE COBRE DE RIO TINTO.****MEXICO.**

Dead. Was succeeded, 1907, by Rio Tinto Mines & Smelting Co. Formerly at Terrazas, Chihuahua, Mex. Fully described Vol. VI.

**COMPANIA MINERA RIO TINTO.****MEXICO.**

Mine office: Guadalupe, Zacatecas, Mex. Property is said to carry gold, silver and copper ores.

**RIO TINTO CO., LTD.****SPAIN.**

Office: 30 St. Swithin's Lane, London, E. C., Eng. Mine office: Las Minas de Rio Tinto, Huelva, Spain. Works office: Port Talbot, Glamorganshire, Wales. Employs circa 11,000 men. Chas. Wm. Fielding, chairman; preceding officer, Rt. Hon. Earl of Denbigh; Lionel C. G. Sartoria, John MacFarlan and John M. Macdonald, directors; J. Gordon Macleod, general secretary; Samuel J. Bowes, financial secretary; Turquand, Youngs & Co., auditors; Commercial Bank of Scotland, Ltd., bankers; Freshfields, solicitors; Walter J. Browning, mine manager; R. E. Palmer, assistant manager; W. G. Nash, estates manager; G. W. Porteous, traffic manager; Geo. Davey, superintendent; Gordon Douglas, engineer; D. Gonzalo Tarin, consulting engineer.

Organized March 29, 1873, under laws of Great Britain, with capitalization £3,250,000; increased, November, 1905, to £3,500,000, shares £5 par, in £1,625,000 cumulative 5% preference shares and £1,875,000 ordinary shares. The new issue of 50,000 ordinary shares, par £5, was sold to shareholders at £63 per share, netting the company £3,150,000, for the redemption of an outstanding bond issue of £2,989,740, at 4%, which was fully retired. Transfer form, common; fee, 2s. 6d.; warrants to bearer issued in denominations of 1 share, fee 6d., and 5, 10 and 25 shares, fee 1s.; fee for conversion into registered shares, 2s. 6d. per certificate. Stock Exchange settlement, all shares quoted in the official list. Fiscal year ends with calendar year; accounts are issued in April, and an interim semi-yearly report is issued in October. Dividends are payable in Paris by the Société Générale, 54 Rue de Provence, and in Bremen, Germany, by the Deutsche Bank.

Dividends were begun 1879, and have been paid continuously, varying greatly according to net earnings. Dividends on the old ordinary shares, of £10 par, 1879, to 1896, ranged from 6s. in 1886 to 38s. in 1896. On the present ordinary shares of £5 par, dividends have ranged from 40% in 1897 to 110% in 1906. Dividends were small at first, because the company was seriously handicapped by three different sets of mortgage bonds, bearing 5% interest.

In 1895 the mortgage debt was consolidated into a single issue of £3,600,000 first-mortgage debentures, bearing 4% interest, with a sinking fund and semi-annual redemption, which would have extinguished the mortgage in 1918, but, by the issue of new share capital, November, 1905, floated at the tremendous premium of 1,160%, the company has placed itself in an impregnable financial position, the credit for this able stroke of finance being due mainly to Mr. Fielding. Recent dividends on ordinary shares have been as follows: £3 12s. 6d., or 72½%, for 1901; £2 10s., or 50%, for 1902; £3 10s., or 70%, for 1903; £3 10s., or 70%, for 1904; £4, or 80%, for 1905; £5 10s., or 110% for 1906; £2 7s. 6d., or 47½%, for 1907.

Gross profits and dividends paid for recent years have been as follows: £1,691,723 profits and £1,214,687 dividends in 1903; £1,714,507 profits and £1,214,772 dividends in 1904; £1,900,539 profits and £1,477,187 dividends in 1905; £2,478,594 profits and £2,139,687 dividends in 1906; £2,139,688 dividends in 1907. The company ended 1908 with a reserve fund of £500,000, of which £400,000 was in consols and £100,000 in selected shares. The company's dividends in 1907 were the greatest ever paid in one year by any copper mine.

Lands, 23,000 acres, freehold, of which 1,922 hectares, or circa 4,700 acres, were secured from the Spanish government, and 18,300 acres adjoining were purchased from various private owners. Mining operations are conducted in an area of practically 5 square miles.

The Rio Tinto is much the most ancient of the great mines of the present day, and its history stretches back into the mists of antiquity. The first semi-authentic account of the mine dates from the Eleventh Century before Christ, when the Phenicians traded in copper made from its ores. Carthage, that vigorous young offspring of Tyre, succeeded to the hegemony of the Iberian mines, and worked the Rio Tinto extensively, for several centuries, being displaced, in turn, by the Romans, after the repulse of the second Punic invasion, followed by the total overthrow of the Carthaginian power. The Rio Tinto was worked by the Romans, for centuries, upon a very considerable scale, and, after the decadence of the Roman power, the mines were operated, in a very crude way, by the Goths. Again the fortunes of war gave the Iberian peninsula to new masters, and the Moors, in turn, were owners and operators of this great copper deposit. Following the expulsion of the Moors from southern Spain, by Ferdinand and Isabella, those most Catholic and most warlike sovereigns of Castile and Aragon, the mines fell into the hands of the Spaniards, and were reopened by them, very early in the Sixteenth Century. The Spaniards, while among the world's best miners, and the pioneers of silver and gold mining in both North and South America, never paid close attention to copper or iron, and, even at home, the Rio Tinto, although the property of the Spanish Crown, was worked, during its most successful periods, by foreigners, as it is to this day. In the Seventeenth Century the mine became a considerable producer, under the management of a Swede named Wolters, and after his death did fairly well under the direction of a French metallurgist named Tiquet. In the Eighteenth Century the mine was leased by the crown to a company of English adventurers, of whom the leading spirit was Lady Maria Theresa Herbert. During the chaotic period of the French invasion, early in the Nineteenth Century, the mine was abandoned, and after being reopened, in 1812, by the Spanish Crown, was worked in a small way only. For the next sixty years the mine was under the management of various lessees, until sold outright, in 1873, to Matheson & Co., of London, for 92,800,000 pesetas, that firm organizing the present company, which has proven one of the most profitable mining corporations in existence.

The remains of mining and smelting operations of the ancients are very notable. Don Gonzalo Tarin, consulting engineer of the company, who has

been closely connected with the mine since 1867, in his very able work, "Memorias," estimates the quantity of scoria remaining from ancient smelting operations, whether Roman or Phoenician, or both, at no less than thirty million metric tons, and his acquaintance with the property and its history, and his opportunities of estimating and verifying these figures, are perhaps the best of any individual living. Lying above slag-piles left by the Phoenicians is a 10' bed of alluvium, on top of which are the Carthago-Roman slags. The smelting practice of the Romans apparently was very good, the slags left by them being as clean as those produced today. It is possible, however, that some of the copper left in the old slags has been leached out, during some 2,000 years of partial exposure to the elements, but it is the opinion of Señor Tarin that the slags have been remelted, in which case the very latest modern metallurgical practice is but a repetition of the work of two thousand years ago.

The only remains of ancient mining tools and machinery that have been found at the Rio Tinto are three oak water-wheels, and some bronze rims of kibbles, which presumably were of wickerwork. There also are many pot-sherds, including fragments of miners' lamps of the well-known classic pattern, and Roman coins are unearthed occasionally.

The Roman system of mining, so far as can be judged from the evidence offered by the Rio Tinto mine, apparently was to cut narrow seams and slab off the ore in large masses, either by wedging, or by the agency of quicklime, tamped into the crevices and then wetted, and possibly both methods were used, these being the systems most generally employed, previous to the adoption of gunpowder for blasting. The richer veins were followed persistently, and the ancients were good judges of values, as has been learned by many a modern mining company that has reopened old mines in Spain and Italy, in the hope of finding that much high-grade ore was left unmined. The Rio Tinto was not worked out, because the deposit was too vast, but the rich ores of the secondary zone of enrichment were quite effectually extracted, in all the old workings. Indications favor the hypothesis that the ancient miners at the Rio Tinto used hard-faced tools and hand-drills, working directly on the faces and in the ore bodies.

The Rio Tinto is situated in a rugged district, in a spur of the Sierra Andevallo, though the hills sometimes are held to be a spur of the Sierra Aracena, which itself is a branch of the famous Sierra Morena. The Rio Tinto, however, is separated from the Sierra Andevallo, which is some 12 miles distant, by the rivers Odiel and Lárrama. The mines are 51 miles by rail from the seaport of Huelva, in the province of that name, lying in the extreme southwestern corner of Spain, near the Portuguese boundary.

The ore bodies of the Rio Tinto occur in mammoth lenses, with clay-slate on the south and porphyry to the north, and are surmounted by large gossans, much decomposed. The surface ore has been leached to the point of absolute worthlessness, the zone of secondary enrichment beginning at a depth of approximately 100', and continuing to an average depth of 300'. Diamond drill borings have shown untouched ore bodies carrying upwards of 130,000,000 long tons of ore, giving sufficient reserves for nearly 70 years' production, at the present rate of mining, and it is unlikely that the full extent of the ore bodies available has been proven. For removal of overburden there are 4 steam-shovels, each with dippers of 4 cubic yards capacity, and about 2,000,000 cubic meters of overburden are removed yearly.

Ore, as extracted, is divided into 3 classes. Smelting ore carries 4 to 6% copper, export ore about 3.5% copper and 45 to 50% sulphur, while leaching ore carries 1.5 to 2% copper only. The average percentage of copper carried by the ores treated has ranged from 1.5% copper, in 1876, the first year of

production by the present company, to 3.234% in 1884, the average of copper extraction being 2.39% in 1903, 2.34% in 1905 and 2.411% in 1906, in which year the lower grades of ore averaged copper returns of 2.302% and 1.198%. The ores carry an average of 1.5 oz. silver per long ton, with traces of gold, and considerable silver is saved, by the Claudet process, at the smelter. About one-third of the total production is exported for sulphur contents, and about one-third of the ore produced is smelted, balance being leached, or sent abroad to burners. The ores average 4 to 5% copper in the zone of secondary enrichment, and with depth decline gradually in value, until at about 1,000' depth the average copper tonar is only about 1.25%. The main ore body formerly was considered to carry chalcopyrite, sparingly disseminated in massive iron pyrites, but apparently the bulk of the ore is cupriferrous pyrite, carrying copper in the form of fine grains of chalcocite, not chalcopyrite, as formerly generally held. Owing to the ore being unusually rich in sulphur, the shipping ores of the Rio Tinto, are in good demand, and, in addition to supplying various British works, the company exports washed sulphur ore, in very large quantities, to Germany, France, Belgium and sundry seaboard acid works in the United States. The reserve heaps at the mine are estimated to carry about 150,000 long tons fine copper, and the copper output of the mine has shown little change since 1898.

The Rio Tinto, has 3 mineral zones, carrying a succession of lenses, these being known as the South or Nerva lode, the Middle or San Dionisio lode and the North lode, in addition to which there are 2 smaller detached lenses, adjacent to the North lode, which, like it, are being worked open-east. There are 5 different mines, of which 3 are worked open-cast and 2 underground, though one of the latter is being changed over for open-cast extraction. The underground mines are worked pillars-and-stall, with levels at intervals of 12½ meters, levels being opened 4 meters high, and the entire floor divided into galleries and crosscuts of 4x4 meters, leaving pillars of 6x6 meters, which is not an entirely satisfactory method of extraction, leaving, as it does, more ore in the pillars than is mined.

The San Dionisio mine, which is the westernmost, also is the deepest, having a shaft of nearly 1,200' depth. Work was begun, 1907, in changing over the San Dionisio for open-cast extraction, and open-pit production probably will begin 1911. The San Dionisio is likely to afford the chief source of ore supply for several decades to come, and the management has laid out work for 10 years in advance.

The principal workings of the Rio Tinto are open-cast, and in these the capping is sliced down, in terraces, and the ore mined in terraces also, cars being brought in by locomotives, to as great depths as practicable, both in stripping and quarrying. The possibility of using the caving system for underground mining was considered, but apparently an adverse decision has been reached. The principal disadvantage of underground mining, beyond the loss of more than half the ground left unmined in the pillars, is the scarcity and high price of wood for timbering, which could be obviated, largely, by the adoption of the caving system.

Some trouble was caused, early 1908, by subsidence of the ground over the South lode mine, this causing the collapse of a considerable number of buildings. This subsidence was not unexpected, though coming somewhat sooner than anticipated, and the buildings lost will be replaced at other points.

Owing to the extensive employment of open-cast extraction, the Rio Tinto lacks the immense hoists and powerful machinery found at the other great copper mines of the world, which is due, not to lack of enterprise, but to the mine's ability to dispense with such expensive machinery, the underground workings being neither especially deep nor extensive. The company erected,

1908, a large central electric power plant, to replace a number of widely scattered and uneconomical steam installations.

The methods of lixiviation followed by the Rio Tinto are described at length in the chapter on hydrometallurgy in this volume. In addition to the amount of copper estimated in the teleras, or primary leach-heaps, there are upwards of 100,000 long tons of copper in the tereros, or secondary leach-heaps. Owing to alternations of heavy rainfalls with protracted seasons of drought, water storage is necessary, dams having been constructed for that purpose, and an additional reservoir was built, 1907. The average rainfall of the Sierra Morena, 1873-1905, was 28" yearly, but, in 1906, the precipitation was only 18", causing serious trouble during 1907, from lack of water, heavy rainfalls at the end of 1907 giving an ample supply for 1908 operations. The ore leached at the mines is no longer calcined, the copper becoming soluable by natural weathering, assisted by systematic sprinking. About 7,000,000 gallons of leach-water, strongly charged with copper, are treated daily, in the various lixiviation plants of the Rio Tinto. The product of the leaching plants is cascara, or cement copper.

There are 5 towns for workmen on the property, and the company has planned an unusually heavy building campaign for 1908, as a large number of dwellings must be constructed, to replace those destroyed, early 1908, by subsidence of the workings of the South Jado.

The smelter, at the mine, built 1902, is treating an increasingly large proportion of ore on the ground, including considerable ore of 4% grade formerly leached. The smelter has two 42x160' elliptical water-jacketed cupolas, 28" 4" over all in height, with charging doors 10' above the bottoms, which are detachable, and mounted on wheels. Each furnace has 8 water-jackets and 12 charging doors, ore and fuel being charged alternately. The furnaces have continuous discharge into 30-ton settlers, 22' in diameter and 49' high, which have continuous slag discharge. Furnace product is matte, of 29 to 34% copper tenor.

Molten matte is taken, in 8-ton ladles, by electric travelling cranes, to the converter department, where there are 6 stands, rotated hydraulically, from a pump. Shells are 80x120", of horizontal basket type, with spherical valves and 12 tuyeres each, and are in 2 parts, for convenience in lining. Shells are double-lined with a 4" external course of Thablock, rarely replaced, and an inner section, 22" to 26" thick, of ground silica and low-grade quartzose copper ore, with 10% of clay for a binder. When newly lined shells have a capacity of only 3 to 4 tons each, increasing to about 8 tons when the inner linings are nearly burned out. The smelter product is converter bars, of 98 to 99% copper tenor.

The mines are connected with the seaport of Huelva by the Rio Tinto-Huelva railway, a single-gauge line of 84 kilometers length, built, 1873, by the company. This line does a general freight and passenger business, in addition to handling the company's heavy traffic, and earns substantial net profits. At Huelva, which probably is built on the site of the old Phoenician city of Onoba, at the junction of the Tinto and Odeiga rivers, the company has extensive railway terminals and wharves. The Rio Tinto company owns the steamer Don Hugo, of 1,240 tons registered burden, plying between Spain and Wales.

The Rio Tinto employs nearly 11,000 men, in Spain, of which number about 50 members of the staff are British. The bulk of the native workmen, latter earning average wages of 15 reals, equal to about .60 cents, per day of 8 and 9 hours. There is no Sunday work, and the men are paid daily, the labor being docile and giving very efficient and satisfactory workmen, in all grades. The population of the dual mining township of Rio Tinto-Netva is

about 27,000, and of the port of Huelva 24,000, hence it is estimated that the Rio Tinto Co., Ltd., is the direct source of support of 50,000 people in Spain, and indirectly supports perhaps half as many more in Spain, England and upon the Continent.

For many years the company maintained extensive smelters and acid works at Cwm Avon, Wales, but the lease was surrendered, 1906, the works being poorly located for receipt and dispatch of material.

The new Welsh reduction plant, at Port Talbot, Glamorganshire, Wales, is a modern smelter of good design and equipment, receiving material by sea from Spain, and having direct rail connection with the Great Western Railway. Electric power is used throughout, and there are 2 Temperley transporters, operated electrically, for carrying bags of precipitate and bars into the ore-sheds. The Port Talbot works have five 30-ton refining furnaces, top-charged by cars operated electrically, and the reverberatory furnaces have side-slag discharge. Slags from the reverberatories, carrying 4 to 6% copper, are remelted in a water-jacket blast-furnace. The works have mechanical ladling, with traveling carriages running on rails, the carriages having ball-bearings, with metal weights on the handles to counterbalance the charge. The cinder from the acid plant is treated by the Henderson wet process, for the extraction of copper.

Production of copper, for the past 5 years, has been as follows: 80,214,400 lbs. fine copper in 1904; 72,307,200 lbs. in 1905; 75,379,520 lbs. in 1906; 72,390,080 lbs. in 1907. Ore production has been as follows: 1,918,538 long tons in 1903; 1,948,819 tons in 1904; 1,980,100 tons in 1905; 1,923,716 tons in 1906; 1,908,948 tons in 1907. Average cost of copper in about 7 cents per pound. About two-thirds of the ore extracted is treated locally and balance shipped, and copper production is approximately 60% from smelting ore and precipitate, and 40% secured from the residue of ore shipped for sulphur burning.

The management of the Rio Tinto happily combines British conservatism with Twentieth Century progress, and the mine itself, having been a producer for three thousand years, scarcely requires endorsement.

#### RIO TINTO COPPER MINING CO.

WYOMING.

Dead. Formerly at Encampment, Carbon Co., Wyo.  
RIO TINTO COPPER SYNDICATE, LTD.

TRANSVAAL.

Dead. Liquidated August, 1908. Former office was Robinson's Bldg., Johannesburg, Transvaal. Capitalization was £6,000, shares £1 par, with working capital of £2,000. Property was the Farm Klipplaatdrift No. 52. Formerly in the Middelburg district, Transvaal.

#### RIO TINTO DEVELOPMENT CO.

U. S. A.

Office: Majestic Bldg., Denver, Colo. W. W. Ellis, president; A. A. Marshall, secretary and treasurer. Organized January, 1908, under laws of Arizona, with capitalization \$2,750,000, shares \$1 par, in \$250,000 cumulative 15% preferred stock and \$2,500,000 common stock. Was formed to buy stocks in copper mining companies.

#### RIO TINTO GOLD & COPPER CO.

ARIZONA.

Dead. Formerly at Prescott, Yavapai Co., Ariz. Described Vol. VI.

#### RIO TINTO (HILLGROVE) COPPER MINES, N. L.

AUSTRALIA.

Office: Charters Towers, Queensland, Australia. Organized Aug. 3, 1907, with capitalization £8,000, shares 2s. 6d. par.

#### COMPANIA MINERA RIO TINTO MEXICANO.

MEXICO.

Office: Chihuahua, Mex. Mine office: Terrazas, Chihuahua, Mex. Employs 150 men. Juan A. Creel, president; Frank Fletcher, general manager; H. L. Schneider, superintendent.

Lands, 96 pertenencias, area circa 200 acres, including the Rio Tinto group

of 50 hectares, at Terrazas, 25 miles north of Chihuahua, on the Mexican Central Railroad, and the Savanarola group, at Savanarola, circa 50 miles south of Chihuahua and 35 miles west of Ortiz, latter carrying argentiferous copper and lead ores.

The Rio Tinto Mexicano mine, opened 1860, closed 1902, and reopened circa 1905, shows limestone and altered andesite, carrying 5 lenticular ore bodies, traced 1,500 meters, in a metamorphic zone between limestone and eruptive rocks, ore, mainly in limestone, occurring apparently as replacements, also as lenses, between the bedding planes of limestone, near a large intrusive quartzite dyke. The ore bodies are erratic in size and occurrence, but are connected, and practically continuous, as a rule. The limestone has an average dip of 45° NW., carrying 5 ore bodies, of 5' to 6' average width. Ores, as developed, are mainly oxidized, and are estimated to average 2.5% copper, with traces of lead and zinc, 5 oz. silver and 0.02 oz. gold per ton.

Development is by the 412' Verde shaft, 350' Prensotorio shaft, 150' Bronec shaft, 120' Pedernal shaft, 180' San Martín shaft and 100' Vinagre shaft, with about one mile of workings.

Equipment includes a 50-h. p. gas plant at the mine, and a 100-h. p. steam plant at the smelter. There are 5 hoists, of 6 to 22 h. p., good for circa 500' depth. Buildings include various shops, of adobe, and 5 stone shafthouses, with 150 adobe dwellings for workmen.

The smelter, at Terrazas, one mile from the mine, receiving ore by wagon and rail, is reached by a 1-kilometer spur from the main line of the Mexican Central Railway. Water is secured from a pumping station, one mile distant, through a 4" pipeline. The smelter, enlarged 1908, which does a general custom business, has a 200-ton water-jacketed blast-furnace, making matte averaging 50% copper, 50 oz. silver and 0.6 oz. gold per ton, sent to the Aguascalientes works for refining. The smelter is planned as the first unit of a 600-ton copper and lead plant. Mine fuel is wood, costing 7 pesos per cord, and coal, costing 13 pesos per metric ton, and smelter fuel is coke, costing 19 pesos per ton.

Production was circa 1,000,000 lbs. fine copper in 1906, circa 1,400,000 lbs. in 1907, and circa 1,500,000 lbs. in 1908. Ore treated 1907, was 27,000 metric tons, averaging circa 2.5% copper, secured at a mining cost of 10 pesos per ton, and smelted at a cost of about 7 pesos per ton, giving an average cost for finished copper of 12.5 cents per ton.

The company plans deepening its shafts and opening new ore bodies; also building an addition to the smelter, material for which was on the ground, late 1908, and constructing a narrow-gauge railroad between the mines and smelter. In August, 1908, the mine was producing circa 75 metric tons of ore daily, averaging 2.5 to 3% copper, 5 oz. silver and 0.02 oz. gold per ton. The mine, while low in average tenor, has very large ore bodies, with a favorable location, and the management is considered good.

#### RIO TINTO MINES & SMELTING CO. MEXICO.

Mine office: Terrazas, Chihuahua, Mex. Martin J. Condon, president; John M. A. Conner, general manager; W. C. Murray, superintendent. Organized 1907, under laws of Mexico, with capitalization 3,000,000 pesos, as successor of Minas de Cobre de Rio Tinto. Property is described under title of Compañía Minera Rio Tinto Mexicano.

#### RIO TONTO COPPER CO. ARIZONA.

Letter returned unclaimed from former mine office, Wickenburg, Maricopa Co., Ariz. Lands, 15 claims, in the Picacho District, east of Wickenburg, said to show gossans of 200' to 300' width, traceable up to 700' in length, with ores carrying 2 to 25% copper.

**SIO VERDE COPPER CO.**

MEXICO.

Letter returned unclaimed from former office, Kansas City, Mo. Mine office: Baborigame, Mina, Chihuahua, Mex. Oliver Krull, manager. Capitalization, \$2,000,000. Lands are the San Carlos group, 20 miles from Baborigame and circa 50 miles from Chozas, having 2 shafts, one showing a 2' vein of mixed copper and lead sulphides, and the other a 2' vein of copper sulphides assaying 12 to 15% in toner. Presumably idle.

**BIO VISTA GOLD & COPPER MINING CO.**

CALIFORNIA.

Office: 25 Nevada Blk., San Francisco, Cal. Mine office: Fair Play, El Dorado Co., Cal. L. W. Hand, president; R. M. Harris, secretary; J. T. Lantford, superintendent. Organized January, 1901, under laws of South Dakota, with capitalization \$1,000,000, shares \$1 par.

Lands, 5 claims, 2 patented, area 100 acres, 2 miles from Fair Play, including the Consumnes mine, area 40 acres, opened by a 400' shaft, said to show a 23% vein, carrying a 4' pay streak of bornite giving average assays of circa 15% copper and \$10 combined gold and silver values. Mine has about 500' of tunnels, the Volcano tunnel being claimed to show a 10' vein carrying bornite. Equipment is said to include a steel gallows-frame, hoist, and 3-drill Rix air-compressor, using baby drills.

The company was said to be building a 30-ton smelter, but same failed to materialize, and the company disappeared from its former office. Company is viewed with suspicion, on account of extremely untruthful advertising in its early days, and the fact that it does not pay its bills.

**RIPLEY COPPER MINES, LTD.**

NORWAY.

Office: Finsbury House, Bloomsbury St., London, E. C., Eng. Organised May 8, 1908, under laws of Great Britain, with capitalization £175,000, shares £1 par, to acquire mines in Norway.

**RIP VAN WINKLE CONSOLIDATED GOLD  
MINING & MILLING CO.**

WYOMING.

Office: Laramie, Wyo. Mine office: Morgan, Carbon Co., Wyo. Dr. I. R. Swigart, secretary and treasurer.

**RISING SUN COPPER MINING & SmELTING CO.**

MARYLAND.

Dead. Formerly at Mt. Washington, Baltimore Co., Md.

**RIVERTON ALTO COPPER CO.**

COLORADO.

Office: 102 Exchange St., Portland, Me. Mine office: Millside, Frémont Co., Colo. H. M. Comstock, general manager. Capitalization \$1,500,000, shares \$1 par, half common and half 8% preferred shares. Lands, circa 300 acres. Company claimed to have 3½ miles of underground workings, and to be building a 50-ton reduction plant, but neither statement verified nor considered credible.

**RIVERSIDE COPPER CO.**

ARIZONA.

Dead. Formerly at Morristown, Maricopa Co., Ariz. Described Vol. VI.

**RIVERSIDE COPPER MINING CO., LTD.**

IDAHO.

Office: Wardner, Idaho. Letter returned unclaimed from former mine office, Cataldo, Kootenai Co., Idaho. Lands are about 10 miles from Cataldo.

**ROARING FORK MINING & MILLING CO.**

WYOMING.

Dead. Formerly at Rambler, Carbon Co., Wyo.

**ROBERTA MINING CO.**

IDAHO.

Letter returned unclaimed from former mine office, Mallan, Shoshone Co., Idaho. Thos. Roberts, manager. Lands, 12 claims, patented, well timbered, one Nine Mile Creek, having several short tunnels, lower, of 100', planned to be driven 2,000', to give a back of 800', to tap 4 parallel veins, 1 of which shows surface ores assaying up to 6% copper, 10% lead, 16 oz. silver and \$3 gold per ton.

**ROBERT EMMET COPPER CO.**

Mine office: Boulder, Jefferson Co., Mont. Bobb Q. Banft, general manager; Robt. Angus, superintendent. Lands, 5 claims, about one mile south of the western portal of the Wickes tunnel, having a 230' shaft, and a tunnel, with about one-fourth mile of workings, showing a 12' vein of mafatite and argentiferous copper and lead ore, assaying up to 15% copper, 15% lead, 5 oz. silver and \$2.40 gold per ton. Property is said to show good ore on the 200' level, carrying payable values in copper, lead, silver and gold. Equipment includes a 100-h. p. electric installation and a 10-drill air-compressor.

**ROBINSON MINING CO.**

Mine office: Ely, White Pine Co., Nev. Capitalization \$1,000,000, shares \$1 par. Lands, 11 claims, area circa 128 acres, near the Giroix Consolidated, having a 40' shaft showing ore said to give average assays of 5.12% copper, 25% lead, 7 oz. silver and 80 cents gold per ton.

**ROBLES GRANITE GOLD & COPPER MINING CO.**

Dead. Formerly at Goldfield, Esmeralda Co., Nev. Described Vol. VI.

**ROB ROY MINING CO.**

Office: care of Edward McGurkin, secretary and treasurer, Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Emmanuel Rauch, president; Angus McKellar, Jr., vice-president. Capitalization, \$75,000. Lands, 4 claims, on Clipper hill. Idle several years.

**NEGOCIACION MINERA LA BOCA NEGRA.**

Dead. Mine sold, circa 1903, to American-Mexico Mining & Development Co. Formerly at Velardeña, Cuencamé, Durango, Mex.

**ROCHEVILLE MINING & MILLING CO.**

Mine office: Bishop, Inyo Co., Cal. A. G. Ringwald, president. Ores are said to include native copper, bornite, chalcocite and tetrahedrite.

**ROCHESTER SHOSHONE MINING & MILLING CO.**

Office: 429 Granite Bldg., Rochester, N. Y. Mine office: Shoshone, Fremont Co., Wyo. Samuel A. Millington, president; Sam B. Palmer, vice-president; August J. May, secretary; Daniel J. Neagg, treasurer; Fredk. O. Merse, general manager. Capitalization \$1,500,000, shares \$1 par. Lands, 12 claims, area 240 acres, circa 2 miles from the Williams-Luman mine, said by company to be in one of the richest copper producing sections in the world, and to be especially valuable because all virgin territory.

**ROCK CREEK COPPER MINING CO., LTD.**

Dead. Formerly at Mullan, Shoshone Co., Idaho.

**ROCIADA GOLD & COPPER CO.**

Mine office: Rociada, San Miguel Co., N. M. Property is said to show a 6' vein of ore, assaying 10 to 20% copper, with lead, silver and gold veins, opened to depth of 200'.

**ROCK ISLAND MINE.**

Office: Pittsburg, Pa. Mine office: De Borgia, Missoula Co., Mont. Equipment includes a steam plant with two 50-h. p. boilers, hoist good for 1,200' and a 6-drill air-compressor. Idle.

**ROCK ISLAND MINE.**

Owned by Butte Coalition Mining Co.

**ROCK LAKE MINING CO., LTD.**

Dead. Liquidated, 1905, and property sold to Algoma Copper & Smelting Co. Formerly at Bruce Mines, Algoma, Ont. Described Vol. IV.

**ROCKLAND COPPER CO.**

Dead. Formerly at Silverton, Kootenay district, B. C.

**ROCKLAND COPPER CO., LTD.**

Office: 568, The Bourse, Philadelphia, Pa. Location of lands, if any, unknown.

**MONTANA.****Nevada.****NEVADA.****Utah.****Mexico.****CALIFORNIA.****WYOMING.****IDAHO.****NEW MEXICO.****MONTANA.****ONTARIO.****BRITISH COLUMBIA.**

**ROCKY MOUNTAIN CONCENTRATING & MILLING CO. COLORADO.**

Mine office: Black Hawk, Gilpin Co., Colo. Ores carry gold, silver and copper. Has gasoline power, 25-stamp mill and 75-ton concentrator. Presumably idle.

**ROCKY MOUNTAIN COPPER CO. WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. VI.

**ROCKY MOUNTAIN SMELTING CO. COLORADO.**

Dead. Property was the Rocky Mountain Smelter. Formerly at Florence, Fremont Co., Colo.

**SOCIÉTÉ DES MINES DE CUIVRE DE RODAM. PORTUGAL.**

Office: Brussels, Belgium. L. Maudet, B. Hoëd, E. Fournier, P. Steenlet and L. Mourguès, directors; Jacques François, commissaire. Organized Feb. 28, 1906, under laws of Belgium, with capitalization 1,000,000 francs, shares 200 francs par. Presumably idle.

**RODMAN MINING & MILLING CO. NORTH CAROLINA.**

Dead. Formerly at Guilford College, Guilford Co., N. C.

**ROBBOURNE COPPER & GOLD MINES. AUSTRALIA.****WESTERN AUSTRALIA, N. L.**

Office: Sydney, N. S. W., Australia. Mine office: Roebourne, Western Australia. Organized circa January, 1907, with capitalization £40,000, shares 10s. par. Lands are the Carlow Castle group, leasehold, carrying 2 ore bodies, said to show considerable ore. Shipped, 1907, several small trial parcels of copper ore to New South Wales smelters, but, owing to fall in price of copper latter half of 1907, has concentrated efforts on gold claims.

**ROGERS COPPER & IRON CO. TENNESSEE.**

Dead. Formerly at Ducktown, Polk Co., Tenn. Described Vol. VI.

**ROGERS FREEHOLD COPPER MINES, LTD. AUSTRALIA.**

Office: Townsville, Queensland, Australia. Organized Aug. 31, 1907, under laws of Queensland, with capitalization £65,000, shares 10s. par.

**ROGERS MINING CO. COLORADO.**

Dead. Formerly at Pearl, Larimer Co., Colo. Described Vol. VI.

**ROGERS SPRINGS MINING CO. ARIZONA.**

Office: Detroit, Mich. Mine office: Cave Creek, Maricopa Co., Ariz. Lands, supposedly 20 claims, 36 miles from Phoenix, the nearest railroad point. Company is said to contemplate a smelter, with a first unit of 100 tons.

**ROGUE RIVER MINING & SMELTING CO. OREGON.**

Dead. Was abortive. Formerly at Grants Pass, Josephine Co., Ore. Described Vol. VI.

**ROHR-GEDDES MINING & DEVELOPMENT CO. NEW MEXICO.**

Office: Raton, N. M. Mine office: Clayton, Union Co., N. M. Fred Rohr, president; Robt. Vogl, vice-president; L. G. Gregory, treasurer; Frank A. Wall, secretary; J. E. Geddes, general manager. Lands, 420 acres, a few miles west of the Pittsburg Copper Co., in the Peacock Cañon district, having several pits and shafts of 15' to 40' depth, and a 267' shaft showing sulphide ore said to assay 22% copper, with small gold and silver values.

**RAFAEL ROJAS. CHILE.**

Office and mine: Tres Puntas, Tocopilla, Antofagasta, Chile. Property includes Tres Puntas mines, showing a vein traceable 140 meters and opened to depth of circa 100 meters. In 1904 produced circa 200 metric tons of ore averaging about 17% copper tenor.

**RONQUILLO COPPER CO. MEXICO.**

Office and mine: 2 Postoffice Bldg., La Cananea, Sonora, Mex. A. D. Nanney, president; G. C. Eastman, vice-president and superintendent; P. J. Tehaney, secretary. Organized Aug. 31, 1905, under laws of Arizona,

with capitalization \$1,000,000; shares \$1 par. Also is organized under laws of Mexico as Ronquillo Mining Co., S. A.

Lands, 72 pertenencias, well timbered, known as the Ronquillo group, 4 miles from Janoverachi, 8 miles south of Cananea and one-half mile from the Sonora river. Formerly owned the Swansea group, sold circa 1902.

The Ronquillo mine shows antigua workings, on a vein up to 40' width, traceable nearly one mile, carrying cuprite, malacite, malachite and azurite near surface, with an iron-porphry gangue. Development is by tunnel and 3 shafts, of which No. 1 shaft, 71' deep, shows 40% of ore at the bottom, averaging 13% copper. No. 2 shaft, 32' deep, has given ores assaying up to 35% copper. Both Nos. 1 and 2 shafts were abandoned on account of soft ground. No. 3, the main working shaft, with 2 compartments, is sunk in country rock, and was circa 100' deep at last accounts. Water in this shaft is strongly impregnated with copper, and the ores carry fair gold and silver values.

#### RONQUILLO MINING CO., S. A.

MEXICO.

Is the Mexican incorporation of the Ronquillo Copper Co.

#### ROOIBERG COPPER CO., LTD.

TRANSVAAL.

Dead. Liquidated, 1907. Formerly in the Transvaal.

#### ROOIBERG MINERALS DEVELOPMENT CO., LTD.

TRANSVAAL.

Office: Oceana Bldgs, Johannesburg, Transvaal. Organized May, 1908, under laws of Transvaal with capitalization £150,000. Company has no connection with New Rooiberg Minerals Syndicate, Ltd. Lands, in the Rooiberg district of the Transvaal, were taken over mainly from the Oceana Mineral Co., Ltd., Farrar Bros, and Anglo-French, Ltd.

#### ROOIPUTS COPPER CO.

CAPE COLONY.

Office: care of H. Sotheott, secretary, Johannesburg, Transvaal. Mine office: Upington, Cape Colony. Chas. A. Q. Bain, chairman; preceding officer, G. H. Poole, Gustav Sonn and W. J. Holmes, directors. Organized August, 1908, under laws of Transvaal, with capitalization £6,000.

Lands are mining rights to the Farm Rooiputs, area 13,400 morgen, equivalent to circa 25,000 acres, adjoining the Areachap property on the north, held under option from June 30, 1908, at £1 per month for first year, and £3 per month for second year, with right to remove all ore at 2s. 6d. per ton, during term of the option, and privilege of purchasing the mineral rights on the Farm Rooiputs for £10,000 and 500 shares in any company floated. Diamonds have been discovered on the farm, and it is supposed to carry the extension of the Areachap ore bodies.

#### ROOKWOOD COPPER CO.

ARIZONA.

Mine office: Globe, Gila Co., Ariz. Idle and apparently moribund.

#### ROOSEVELT GOLD & COPPER MINING CO.

ARIZONA.

Office: care of W. G. McDonald, president and general manager, P. O. Box 477, Bisbee, Ariz. Mine office: Ft. Thomas, Graham Co., Ariz. Property, 15 miles from Ft. Thomas, has a 60' shaft showing cuprite, malachite, chalco-cite and chalcopyrite, of good assay values. Idle several years.

#### ROOSEVELT GOLD, SILVER & COPPER MINING CO.

MONTANA.

Dead. Was organized May, 1908, under laws of Montana, with capitalization \$1,000,000; shares \$1 par. Directors were Del Amaden, Simon Bank, Swan T. Hogevoll, Daniel McNichol and Wm. Robertoep. Formerly at Butte, Silver Bow Co., Mont.

#### ROOT RIVER GOLD & COPPER SYNDICATE.

ONTARIO.

Office and mine: Sault Ste. Marie, Algoma, Ont. B. W. Harris, president; F. B. Sullivan, vice-president; Alex McIntyre, second vice-president; T. Robinson, secretary; Wm. Calder, treasurer. Organized under laws of Ontario, with capitalization \$1,000,000. shares \$1 par. Lands are 40 acres surface rights, and mineral rights to 640 acres, in Section 32, Township of Aweres, 11 miles

north of Sault Ste. Marie, on the Algoma Central railroad. Lands have a 70' shaft, showing a vein of 12' to 16' width, traceable circa 1,000', carrying auriferous and slightly argentiferous copper ore, giving average assays of 2.37% copper.

#### RÖROS KOBBERVÆRK.

NORWAY.

Mine office: Börøe, Trondhjem, Norway. Employs circa 700 men. Property is a group of old mines, including the Storvarts, Kongens, Kristian VI, Muggruben and Arvedals Grube, partly owned by the Norwegian government. From A. D. 1646 to 1897, this group of mines produced 73,000 metric tons fine copper, and exported 260,000 tons of pyrites, the aggregate value of this product being upwards of \$35,000,000.

The Kongens and Arvedals groups carry chalcopyrite, and ore at the other properties is cupriferous pyrite, the ores ranging in copper tenor from 4.5 to 5% in the Kongens group, about 5% in the Muggruben, up to 6 to 7% in the Storvarts mine, the pyritic ores averaging about 45% sulphur.

Equipment includes a hydraulic power installation. The workmen are treated with great consideration, company running a special train to carry the men from the mine at Saturday noon, and bringing them back again similarly Monday morning.

Ore is matted in water-jacket blast-furnaces to a first-fusion product of about 37% copper tenor, which is remelted to low grade pig-lead, averaging 78% copper, which, in turn, is blown up, in Bessemer converters, to black copper of 95.5% tenor.

About 40% of the ore produced is exported for sulphur values only, though slightly cupriferous, and the balance smelted on the ground. Production, 1904, was 18,000 metric tons of ore smelted, averaging a trifle better than 4% copper, and 11,000 tons of pyrites exported, giving a total output of 1,841,000 lbs. fine copper, and in 1907 was 12,700 metric tons of cupriferous pyrite, yielding 1,365,000 lbs. fine copper. This is the second largest copper mine of Norway, and apparently should be able to increase production in the near future.

#### ROSALIE COPPER CO.

ARIZONA.

Mine office: Meyer, Yavapai Co., Ariz. Samuel L. Casey, president; Wm. Nellis, first vice-president; Marshall Haddock, second vice-president; W. N. Rynerson, treasurer; E. M. Metcalf, secretary; Geo. G. Meese, general manager; preceding officers, Chas. Schifferdecker and Wm. A. Moses, directors. Organized under laws of Arizona, with capitalization \$3,000,000, shares \$1 par.

Lands, 9 claims, patented, area 180 acres, in the Copper Creek district, circa 25 miles southeast of Mayer and 18 miles from Cortes Siding, nearest railroad point, with a wagon road between. Mine has numerous pits and shafts, of 10' to 148' depth, and a 420' tunnel, showing a 2' to 3' vein carrying native copper, cuprite, azurite, malachite and a little malacinite in the oxidized zone, followed by bornite, chalcopyrite and occasional chalcocite, giving assays up to 23% copper, average assays being 4.15 to 7.3% copper, with small gold and silver values. Has a 50-h. p. gasoline engine and air-compressor, and shipped, 1907, a little ore, returning circa 9% copper. Company's prospectus is filled with misleading general statements regarding the profits of copper mines. Closed down, 1907, but plans resumption.

#### ROSA AMARILLA COPPER CO.

MEXICO.

Office: 33 Portland Blk., Chicago, Ills. Mine office: Pueblo Nuevo, Sayula, Jalisco, Mex. A. L. Dewar, president; Davy Campbell, vice-president; F. W. Harwell, secretary; L. E. Fuller, treasurer; John Mann, superintendent; John A. Kruse, engineer. Organized July 25, 1904, under laws of Maine, with capitalization \$5,000,000, shares \$1 par, and is organized under laws of Mexico as Rosa Amarilla Copper Co., Sociedad Anonima.

Lands, 5 groups, area circa 300 acres, including the Rosa Amarilla and

Ethel copper groups, and the Talpurito silver group, circa 30 miles southwest of Autlán. Company has 3 water rights denounced, and has leased a timber tract of 1,800,000 acres, which can furnish timber at practically cost of cutting.

Lands show 4 ore bodies, probably lenses, averaging 100' and upwards in width, in a zone of circa 600' width, with outcrops traceable several miles. Average of upwards of 300 assays gave 7.8% copper, 6 oz. silver and a trace of gold, from oxide, carbonate and sulphide ores. Development is by 2 shafts, deepest 105', and 4 tunnels, in addition to which some diamond drilling has been done. Property is 26 miles from the Pacific and company controls a harbor known as Puerto de Natividad. A road between the mine and port can be built with a grade not exceeding 4% at any point, and averaging about 100' per mile.

#### **COMPANIA MINERA ROSARIO.**

**ARGENTINA.**

Mine office: Calamuchita, Córdoba, Argentina. Ore body is iron pyrites, carrying chalcopyrite, with quartz gangue, averaging 5% to 6% copper. Has a smelter with a 36" blast-furnace, making matte averaging 65% copper and 30 oz. silver per ton, sent to Great Britain for reduction and refining, when mine is working. Idle at last accounts.

#### **MINA ROSARIO.**

**CHILE.**

Mine office: Tamaya, Ovalle, Coquimbo, Chile. Is owned by the Familia Lecaros. Mine, opened 1850, is 590 meters, or about 1,900', in depth. Produced, 1866-1888, ore to extent of 64,589 short tons, averaging 17.7 to 29.4% copper tenor. Idle for some years, owing to decreased ore values at depth, and heavy timbering charges, but, with a railroad to Tongoi, and modern equipment, could be worked to advantage.

#### **MINAS ROSARIO I PROVIDENCIA.**

**CHILE.**

Mine office: Chafarcillito, Caldera, Atacama, Chile. Mine shows 2 parallel ore bodies, averaging 8 to 10 meters width, in diorite and limestone, traceable for some distance, one ore body showing oxidized ores of copper, associated with spathic iron, these averaging about 4% in tenor and requiring concentration. The second vein carries oxidized ores only, to depth opened, these averaging about 5% copper. Ores, which are free smelting, are sent to Tierra Amarilla for reduction. Production, 1903, was about 450 metric tons of ore, averaging 16% in tenor, equivalent to about 160,000 lbs. fine copper.

#### **ROSELLE MINING CO.**

**BRITISH COLUMBIA.**

Dead. Formerly on Haskins Mountain, Liard River division, Cassiar district, British Columbia.

#### **ROSEMONT COPPER CO.**

**ARIZONA.**

Office: 42 Broadway, New York, N. Y. Mine office: Rosemont, Pima Co., Ariz. Is controlled by the Lewisohn interests. Geological conditions are said to be similar to those at Bisbee, and ore bodies apparently are large. Idle for some years.

#### **ROSEWOOD CREEK COPPER & GOLD MINING CO., LTD.**

**AUSTRALIA.**

Office: 7A Upper St. Martin's Lane, London, W. C., Eng. R. K. Evans, secretary. Mine office: Rosewood, Denison Co., Queensland, Australia. Organized July 31, 1903, as a reconstruction of Great Northern Copper & Gold Mining Co. of Queensland, with capitalization £100,000, shares 5s. par. Lands, 265 acres. Idle several years and apparently moribund.

#### **ROSSLAND-GREAT WESTERN MINES, LTD.**

**BRITISH COLUMBIA.**

Dead. Reorganized, May 17, 1902, as Rossland-Kootenay Mining Co., Ltd. Formerly at Rossland, Trail district, B. C.

#### **ROSSLAND-KOOTENAY MINING CO., LTD.**

**BRITISH COLUMBIA.**

Office: Salisbury House, London, E. C., Eng. Mine office: Rossland, Trail district, B. C. C. Williamson Milne, chairman; Bedford McNeill, consulting engineer; F. A. Labouchere, secretary. Organized May 17, 1902, under

laws of great Britain, as a reconstruction of Rossland-Great Western Mines, Ltd., and Kootenay Mining Co., Ltd., with capitalization £150,000, shares £1 par; issued, £148,607. Lands, 171 acres, carrying auriferous and argentiferous copper ores, of low grade, also surface rights to 113 acres additional. Idle since August, 1904.

#### **ROSS MINING & MILLING CO.**

#### **COLORADO.**

Office: Boss Bldg., Waynesburg, Pa. Mine and works office: Silverton, San Juan Co., Colo. Gilbert B. Parker, president; Ralph E. Clemson, vice-president and secretary; Frank L. Ross, treasurer; J. B. Ross, general manager; Patrick Lonergan, mine superintendent; E. W. Walter, smelter superintendent. Organized Dec. 13, 1905, under laws of Colorado, with capitalization \$2,500,000, shares \$1 par. Pittsburg Trust Co., transfer agent and registrar. Annual meeting, second Saturday in September.

Lands, 42 lode claims and 3 placer claims, area 300 acres, also 3 millsites, area circa 80 acres, with miscellaneous lands giving total holdings of 750 acres, in the Animas, Eureka and Red Mountain districts. Lands include groups known as the Champion, Belle Creole and Galtie Boy, held under a working bond and lease, partly paid, from the San Juan Smelting & Refining Co., also the Carbonate King mine, on Red Mountain, held under bond and lease.

The Champion mine, opened circa 1885, has 3 fissure veins, in granite, opened by a 45' shaft and by tunnels of 150', 375', 800' and 1,700', with total workings of 2,550', showing ore giving average assays of 5.5% copper, 25 oz. silver and \$10 gold per ton, which assays probably are above the average value of the ore. Equipment of the Champion includes a 75-h. p. steam plant, 5-drill Rand air-compressor and 7 mine buildings.

The Belle Creole mine shows 2 fissure veins, in andesite, of 20' width and 1,600' length, slightly developed by shafts of 15' and 35', and by tunnels of 75' and 150', carrying low grade milling ore estimated to average circa 15% lead, 12% zinc, 15 oz. silver and \$4 gold per ton. The property is practically without equipment.

The Galtie Boy shows 3 veins, occurring as fissures in andesite, these being said to average 6' width and to be traceable 3,000', opened to a depth of 600' by a 50' shaft and by tunnels of 350' and 2,500', with total workings of 2,900'. Ore gives average assays of 3% copper, 10% lead, 10 oz. silver and \$5 gold per ton. Equipment is a 5-h. p. gasoline hoist.

The reduction plant, known as the Kendrick & Gelder smelter, is at Silverton, 1,500' from the Champion, 2,000' from the Galtie Boy and 3 miles from the Belle Creole mine, served by the Denver & Rio Grande and the Silverton, Gladstone & Northern railroads. The plant is a pyritic smelter, not thoroughly modern, having a 125-ton blast-furnace. The smelter does a general custom business, when operated, making matte carrying 45 to 50% copper, circa 200 oz. silver and circa 3 oz. gold per ton.

The company planned extensive development, the construction of a 20-stamp mill at the Galtie Boy mine, and the enlargement of the smelter, during 1906, but property was closed down, October, 1907, on account of financial difficulties, which apparently were adjusted, 1908.

#### **BOUILLARD MINE.**

#### **NEW HAMPSHIRE.**

Mine office: Woodsville, Grafton Co., N. H. Property is on Mt. Gardner. Idle since 1902.

#### **HOUSE-GARDNER MINING CO.**

#### **COLORADO.**

Dead. Formerly at Central City, Gilpin Co., Colo.

#### **ROUTT COUNTY GOLD & COPPER MINING CO.**

#### **COLORADO.**

Office: 635 Seventeenth St., Denver, Colo. Letter returned unclaimed from former mine office, Steamboat Springs, Routt Co., Colo. W. T. Perkins, president; F. E. Cbe, secretary and treasurer. Organized March, 1903, under

laws of Wyoming, with capitalization \$1,500,000, shares \$1 par. Lands, 5 claims, area 50 acres, 100 miles from nearest railroad, having about 1,000' of tunnels, said to show considerable ore assaying \$3.50 to \$150 per ton, in gold, silver, copper and lead. Idle some years.

**ROWAN GOLD & COPPER MINING CO.****NORTH CAROLINA.**

Dead. Formerly at Gold Hill, Rowan Co., N. C. Described Vol. VI.

**ROYALBERG COPPER MINES, LTD.****NORWAY.**

Office: 2 Basinghall Ave., London, E. C., Eng. Mine office: Kongsgberg, Christiania, Norway. E. T. Evans, secretary; E. C. Plews, manager and engineer; Ingwolf Otterbeck, superintendent. Organized Apr. 24, 1903, under laws of Great Britain, with capitalization £100,000, shares £1 par; issued, £81,600. Debentures, £1,500 at 8% and £7,500 at 5%.

Lands, 18 claims, area circa 50 acres, title by crown grant, also 20 acres timber lands, in the Fiskum district, opened by shafts of 40', 70' and 100', and by tunnels of 120' and 250', showing four 3' fissure veins in volcanic micaschists, giving average assays of 14% copper, 20% lead, 10% zinc and 24 oz. silver per ton, from sulphide ores, and estimated to show 30,000 tons of ore, with 15,000 tons blocked out for stoping. The West Norway railroad is 2 miles distant, and it is proposed to develop 100 h. p. from a nearby waterfall. A small concentrator has been erected at the mine, and small shipments of concentrates have been made to British works.

**ROYAL CONSOLIDATED COPPER CO.****NEVADA.**

Dead. Organized 1907, under laws of Arizona, with capitalization \$2,500,000. L. L. Crisp was president. Apparently was promoted by the late Rev. Col. W. P. Fife. According to printed reports, the company's expert explained that the formation was "dyarite," porphyry and limestone, with large "burns" of iron gossan, ore deposits consisting of copper, gold and silver, lying in a fissure "cutting" a contact of porphyry and lime. The ore body was claimed to be 250' wide. Obviously was merely a bit of stock-jobbery. Former office was at Goldfield, Nev. Former mine office was at Mina, Esmeralda Co., Nev.

**ROYAL CONSOLIDATED MINES OF EL COBRE, LTD.****CUBA.**

Dead. Succeeded, circa 1902, by El Cobre Mines. Formerly at El Cobre, Santiago de Cuba.

**ROYAL COPPER CO.****NEW MEXICO.**

Dead. Property sold, 1901, to Aberdeen Consolidated Gold & Copper Co., also dead. Formerly at Lordsburg, Grant Co., N. M.

**ROYAL COPPER MINING CO.****UTAH.**

Dead. Title changed, 1902, to Cactus Smelting & Copper Co., also dead. Formerly at Frisco, Beaver Co., Utah. Fully described Vol. II.

**ROYAL COPPER MINING CO., LTD.****MONTANA.**

Office: Wallace, Idaho. Mine office: Belknap, Sanders Co., Mont. Chas. D. Johnson, superintendent. Surface trenches show ore, and a 463' crosscut tunnel cuts, at 400', a vein said to average 6% copper and 18% lead, with small silver values.

**ROYAL CROWN MINING CO.****MEXICO.**

Office: Independencia No. 38, Oaxaca, Mex. Mine office: Ocotlán, Oaxaca, Mex. Gustavo Stein, president; Teodoro Meyer, secretary and treasurer; A. Hopley Woolrich, general manager; Martin Aguirre, superintendent. Organized under laws of Mexico, with capitalization 300,000 pesos, shares 1 peso par; paid in, 135,000 pesos.

Lands, 80 acres, also a 10-acre smelter site, in the Ocotlán district, showing 4 contact veins, between quartzite and andesite, of which two are being developed, these averaging 3 meters width and giving average assays of 13% copper, 739 grams silver and \$11.50 gold per metric ton, from malachite, azurite and

chrysocolla, in the oxidized zone, and from chalcopyrite in the base zone. Mine is opened by shafts of 122' and 125', and is served by the Ocotilla & Ejutla railway, one-half mile distant. Presumably idle.

**ROYAL GOLD & COPPER MINING CO.**

UTAH

Dead. Apparently merged, circa 1904, in Nevada-Utah Mines & Smelters Corporation. Formerly at Milford, Beaver Co., Utah. Fully described Vol. II.

**ROYAL METALS MINING & LEASING CO.**

NEVADA

Mine office: Ely, White Pine Co., Nev. Organized circa April, 1907.

**ROYAL MINING & INVESTMENT CO.**

COLORADO

Mine office: Silverton, San Juan Co., Colo. W. R. Pyke, superintendent. Has argentiferous lead and copper ores, with steam power equipment, employing circa 20 men.

**ROYAL MORELOS COPPER CO.**

MEXICO

Dead. Was succeeded, 1908, by Occidental Copper Co. Was organized under laws of Arizona or Maine, or both, with capitalization \$500,000, shares \$1 par, holding lands through the Compañía Cobre de Morelos, S. A., organized under laws of Mexico. Officers were as follows: Hon. Aylett R. Cotton, president; Alfred Courchesne, vice-president; Emlyn Lewys, treasurer; James W. Magoffin, secretary; Edward C. Kemble, assistant secretary; S. W. Ferguson, general manager; D. B. Davison, superintendent. Lands were 18 hectares, in 6 groups, lying one-half mile to 3 miles south of the international boundary line, in the district of Ciudad Juárez, in the extreme northwestern corner of the state of Chihuahua, Mexico, showing slightly auriferous and argentiferous copper ore, giving assays up to 6% copper. Former office was 1300 Golden Gate Ave., San Francisco, Cal. Formerly at Victoria, Donna Ana Co., N. M.

**ROYAL THARST'S MINING CO.**

TASMANIA

Dead. Lands sold, for £13,347, to Mount Lyell Mining & Railway Co., Ltd. Formerly at North Mount Lyell, Montagu Co., Tasmania.

**ROYAL VICTORIA MINING CO.**

BRITISH COLUMBIA

Mine office: Grand Forks, Boundary district, B. C. John Fox, superintendent, at last accounts. Property is the Golden Eagle mine, circa 12 miles from Grand Forks, having about 400' of openings, showing auriferous copper ore of good grade with calcite gangue. Idle at last accounts, awaiting better transportation facilities.

**RUBÉNA MINING CO.**

MEXICO

Office: 1208-134 Monroe St., Chicago, Ills. Mine office: La Poza, Ures, Sonora, Mex. Wm. E. Jones, president and general manager; Hon. Victor Aguilar, vice-president; R. C. White, secretary; E. J. White, treasurer; Hon. Ricardo P. Cubillas, assistant treasurer; H. F. Wiggin, superintendent. Organized Nov. 26, 1906, under laws of Arizona, with capitalization \$5,000,000, shares \$1 par. Chicago Title & Trust Co., registrar. Annual meeting, first Monday in November.

Lands, 140 acres, held in trust, by the vice-president, until company is protocolized, or a holding company formed, under the laws of Mexico. Lands show 4 lode veins, in granite, of which 2, under development, traceable about 1½ miles on company's property, range 30" to 8' in width, opened by shafts of 326', 150' and 100' and by tunnels of 225' and 30', showing ore averaging about 2.2% copper, 8% lead, some zinc, 15 to 2,550 oz. silver and from a trace to \$5 gold per ton, ore being mainly sulphides, with occasional carbonates. Company estimates 5,000 tons of ore on the dumps and 10,000 tons broken in the stopes. Property, opened 1835, was worked intermittently thereafter by Mexican owners. Has steam power, with 6x8" hoist good for 300' depth, and 10 mine buildings. Plans building a 100-ton concentrator.

**RUBY COPPER & GOLD MINING CO.**

WYOMING

Dead. Formerly at Encampment, Carbon Co., Wyo.

**RUBY GOLD & COPPER CO.**

Dead. Formerly at San Marcial, Sonora, Mex. Fully described Vol. VI.  
**RUBY HILL COPPER MINING & SMELTING CO.** MEXICO.

Dead. Formerly at Coppervale, Lassen Co., Cal.  
**RUBY HILL TUNNEL & MINING CO.** CALIFORNIA.

Mine office: Eureka, Eureka Co., Nev. A. P. Mayberry, superintendent, at last accounts. Lands, between the Richmond and Connor mines, are opened by a tunnel, said to be 2,200' long. Presumably idle.

**RUBY KING COPPER MINING & TOWNEITE CO.** NEVADA.

Dead. Formerly in Colusa county, California.

**RUBY MINING CO.** WASHINGTON.

Office: Massfield, Ohio. Mine office: Nighthawk, Okanogan Co., Wash. Monroe Harman, president; Jas. A. Hauer, vice-president; Chas. B. Bushnell, secretary and treasurer; preceding officers, M. L. Branyan and S. P. Eck, directors. Organized Nov. 16, 1902, under laws of Washington, with capitalization \$1,500,000, shares \$1 par; issued, \$1,175,000. Annual meeting, second Tuesday in June.

Lands, 7 claims, unpatented, area 136 acres, with 46 acres miscellaneous lands, held in fee, on Mt. Chopaca, near the Similkameen river, 3 miles south of the international boundary, and within 600' of the Great Northern Railway. Lands show syenite carrying 3 lenticular ore bodies with northwesterly and southeasterly strike, and dip of 47°, one of which, under development, is of about 4' average width, traceable 1,000', carrying cupriferrous pyrargyrite, assaying 6.5% copper, 2% lead, 1.5% zinc, 6 to 9,000 oz. silver and 80 cents gold per ton. Development is by crosscut tunnels of 226' and 1,011', and a 10' tunnel in ore, with total workings of circa 6,800', estimated to show 60,000 tons of ore. Property has no equipment. Company shipped 7 carloads of ore, 1907, netting \$5,500. Idle since June 1, 1908, but management plans resumption, and the installation of a power plant.

**RUDDYGORE MINE.**

AUSTRALIA.

Owned by Chillagoe Co., Ltd.

**RUDIANSKI MINES.**

RUSSIA.

Office: care of P. T. Zamiatnin, Perm, Russia. Mine office: Bogoslovsk, Nizni-Tagil'sk, Perm, Russia. Property is a group of old mines, including the Medzorondiansk, famous for its great variety of copper minerals, including oxides, carbonates, silicates and phosphates, with occasional native copper, and especially notable for its production of massive malachite, a single mass weighing 330 tons having been found in 1836. Ore occurs as local enrichments, of good average tenor, in Permian red beds. Latest production officially reported, 1899, was 3,122,112 lbs. fine copper but is estimated at 2,500,000 lbs. fine copper only, for 1907.

**RUDOLPH LAND CO.**

WISCONSIN.

Office: care of Rudolph M. Weyerhaeuser, Cloquet, Minn. Mine office: Gordon, Douglas Co., Wis. Organized circa 1905, succeeding the Minong Range Copper Co. Lands are in Sections 11, 12, 13 and 14, Range 43 North, Town 10 west. Property is on the southern fold of the Keweenawan syncline, opened by two 7x10' shafts, deepest 100', sunk at 36° in a dark amygdaloidal rock, carrying native copper in small quantities. Property is fully described, under title Minong Range Copper Co., Vol. III.

**SOCIEDAD ANONIMA COBRES DE RUESGA.**

SPAIN.

Office: Bilbao, Spain. Mine offices: San Martín de Los Herreros, Palencia, Spain, and Dehesa de Montojo, León, Spain. Don Julio Lazártigui, president; Don Augustin Cortina, secretary. Organized 1901, with capitalization 1,500,000 pesetas, shares 500 pesetas par. Property includes the Leonor and adjoining mines. Presumably idle.

**RUMAILLANA TUNNEL CO.**

PERÚ.

Mine office: Cerro de Pasco, Junín, Perú. Development is by the Yauri-cocha and Mesapeta shafts, suspended 1905, and by the Rumaillana, or Meiggs, drainage tunnel, planned to drain and open the entire Cerro de Pasco district. Tunnel was circa 1,800 meters long, 1906, but had cut none of the expected ore bodies.

**RUSH & BROWN.**

ALASKA.

Office and mine: Kasaan, Alaska. U. S. Rush and George E. Brown, owners; John Righy, mine superintendent. Lands, 8 claims, area 160 acres, also a 15-acre millsite, on Karta Bay, in the Ketchikan district, showing diorite, felsite, quartzite, conglomerate and chloritic schists, with occasional limestone, carrying chalcopyrite, associated with magnetite, in veins and in lenticular masses, in 3 ore bodies, having a generally east and west strike, of which 2, developed by shafts of 20', 80' and 80', and by 3 tunnels, longest 160', show an average width of 8, giving ore assaying 3.5% copper, 1 oz. silver and \$2 gold per ton. Has a small steam hoist and several mine buildings. Mine is served by a tram, taking ore to wharfs at Venus Bay, 3 miles distant, where loaded on vessels and barges, for shipment to smelters. Shipped some ore, 1907, of good average tenor. Suspended operations, late 1907, on account of depression in metal market.

**RUSSELL-BALL COPPER CO.**

ALASKA.

Mine office: Valdez, Alaska. Lands, on Dryer Bay, are said to show an 8' body of copper ore.

**RUSSELL GULCH MINING & DEVELOPMENT CO.**

COLORADO.

Dead. Formerly at Russell Gulch, Gilpin Co., Colo.

**RUSSELL UNITED COPPER CO.**

ARIZONA.

Dead. Lands sold, circa 1904, to Arizona Consolidated Mining Co. Formerly at Benson, Cochise Co., Ariz.

**RUSTLER MINING & MILLING CO.**

MONTANA.

Mine office: Libby, Flathead Co., Mont. Property is the Snowshoe mine, said to have shipped about \$800,000 worth of ore, but idle since circa 1906, on account of litigation.

**RUTHBURG CONSOLIDATED COPPER CO.**

IDAHO.

Dead. Formerly at Weiser, Washington Co., Idaho. Described Vol. II.

**RUTHERFORD COPPER MINING CO.**

TASMANIA.

Mine office: Burnie, Russell Co., Tasmania. Ore is said to average 7.5% in copper tenor. Idle at last accounts.

**RYE COPPER CO.**

ARIZONA.

Office and mine: care of Chas. T. Martin, secretary, Globe, Gila Co., Ariz. E. F. Eisenhour, president and general manager. Organized 1905, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 17 claims, well timbered and suitable for grazing, with an available water-power, east of the Mazatzal Mountains, in a slightly explored district, circa 75 miles north of Globe and about the same distance south of Flagstaff. Country rock is diorite, with intrusive porphyry dikes, carrying contact veins showing sulphide ores associated with hematite, near surface. The mine has circa 1,000' of workings, including shafts, tunnels and trenches. Idle.

**SAAVEDRA I BESA.**

CHILE.

Mine office: Quebradita, Freirina, Atacama, Chile. Cornelio Saavedra and Alíro Besa, owners and managers. Lands, 8 hectares, 27 kilometers from Peña Blanca, showing a fissure vein in granite of about 5' average width, with strike of N. 42° E., and 66° dip. Mine is opened to depth of 418 meters, with extreme length of 270 meters of horizontal workings, showing an oxidized zone of about 40 meters depth, succeeded by sulphides, mainly chalcopyrite with quartzose gangue, averaging 16% copper. Water is encountered at 110'. Has

a steam plant with three 70-h. p. boilers, and an electric plant for lighting and to actuate pumps and mill. Employs about 140 men. Production, 1903, was about 2,100 metric tons of ore of 18% average copper tenor, equivalent to about 740,000 lbs. fine copper.

**SACAJEWEA GOLD & COPPER MINING CO.****MONTANA.**

Office: 11 Broadway, New York, N. Y. Mine office: Helena, Lewis & Clark Co., Mont. Col. Henry Altman, president and general manager; W. J. Anson, secretary. Capitalization \$5,000,000, shares \$10 par. Lands, 47 claims, in the Scratch Gravel district, adjoining the Copper-Silver Montana Mining Co. Was said, 1907, to plan sinking 3 shafts. Presumably idle.

**SACATON SPRINGS MINING CO.****CALIFORNIA.**

Letter returned unclaimed from former mine office, Cima, San Bernardino Co., Cal. L. I. Plummer, president and general manager; E. P. Barnes, secretary; Wm. Heath, superintendent. Lands, 17 claims, on the western slope of New York Mountain, carrying circa 3 miles of the strike of a contact deposit between limestone and granite, ranging up to 65' width, opened by a 100' shaft and a 300' tunnel.

**SADDLE MOUNTAIN MINING CO.****ARIZONA.**

Office: 902 Chapel St., New Haven, Conn. Mine office: Christmas, Gila Co., Ariz. Lewis S. Welch, president; Clarence Stephens, vice-president; Story B. Ladd, secretary; Wilbur W. Delano, treasurer; Wm. D. South, manager; Jas. H. Myers, smelter superintendent. Organized 1902, under laws of Arizona, with capitalization \$1,000,000, increased, later, to \$2,500,000, shares \$1 par; issued; \$1,350,000. Debentures, \$1,000,000 first-mortgage 6-year 6% bonds, dated Oct. 31, 1907; issued, \$625,000. Floating indebtedness was cared for, Oct. 1, 1908, by issue of 6-month notes, with privilege of 6 months renewal, at option of the company.

Lands, 1,441 acres, patented, with abundant water, on both sides of the Gila river, in Gila and Pinal counties, circa 25 miles due south of Globe and nearly north of Tucson. Property includes copper claims lying north of the river, and gold, silver and coal claims directly opposite, south of the river, all 3 groups lying in a radius of 6 miles.

There are 15 claims, patented, area 266 acres, of gold and silver lands, showing base dry ore, with a little lead and zinc and traces of copper, the average of upwards of 300 assays giving a trifle better than \$18 per ton in combined gold and silver values. The gold and silver claims have 3,450' of workings.

The coal lands, 640 acres, patented, in the lower basin of Deer Creek, show a 3' vein of low grade bituminous coal, developed by a 175' incline shaft, with circa 800' of workings, equipped with a small steam hoist and pump. There is a beehive coke-oven on the property, ready for test, as the coal may or may not prove available for coking, but is adapted to making producer gas.

There are 36 patented copper claims, area 535 acres, the principal group being at the junction of Disappointment Valley with the Gila river, on the north side of the stream, 8 miles from Winkelman, present terminus of the Phoenix & Eastern railroad, which is the nearest shipping point. The mine was opened, 1883, by the San Carlos Copper Co., but was closed, 1884, because found to be located on the San Carlos Indian Reservation, and remained idle until the lands were restored to the public domain, by executive order of the president, Dec. 2, 1902.

The property shows members of the upper Carboniferous Limestone in various stages of alteration, near a granite-porphry contact, ores occurring along the irregular line of contact for circa 6 miles on the company's lands, mainly as replacements in limestone, and principally as carbonate ores, with garnetiferous gangue, on the limestone wall, and sulphides along the porphyry

contact at depth. The contact zone has shown copper ore wherever opened, and the porphyry also carries copper ore below workable tenor. Four main ore bodies are under development, these ranging from 4' to 60' in width, carrying cuprite, malachite, chalcocite, bornite and chalcopyrite, latter disseminated in pyrite, all slightly auriferous and argentiferous, and self-fluxing throughout. Ore as mined has averaged about 3% copper and 30 to 40 cents per ton in combined gold and silver values, by wet assay.

Development is by shafts of 430', 840', 275' and 175', all showing oxidized and sulphide ores, and the company has planned a tunnel of circa one mile length, to connect with the 300' main working shaft. The Christmas shaft, started 1907, has 3 compartments, each 4x8' in the clear, and is planned for the main working shaft. No. 1 or Hackberry shaft, the deepest, shows good ore on the 120' level, said to average 3.75% copper, also good ore on the 300' level, the upper workings showing a blanket vein of about 6' thickness, said to be proven for 800' in width and 625' in length. The 400' level is said to show ore averaging about 5% copper tenor. The mine has circa 12,000' of workings, with a large quantity of ore in sight, though very little is blocked out systematically, but considerable ore could be developed for stumping with little effort. The mine also has open-cast workings, of circa 30,000 square feet area, showing carbonate ores.

Equipment includes a 75-h. p. steam plant, with 4 small hoists, good for circa 500' each, and there are larger hoists on the ground, but not installed. There are 10 buildings for various uses.

The smelter, at the mine, receiving ore therefrom by wagon and tram, has a daily capacity of circa 225 tons. The old smelter, erected, 1884, by San Carlos Copper Co., was torn down and furnaces replaced by a 150-ton Mitchell economic hot-blast furnace, which apparently has been replaced also by a 36x122" Colorado Iron Works blast-furnace, of circa 225 tons daily capacity. The major part of the material for a 500-ton furnace, 44x200" in size, is on the ground, but not set up. Ore is self-fluxing, and the slag carry about 36% silica and 23% iron. Product, when smelter is in blast, is matte carrying 60 to 65% copper, 10 to 14 oz. silver and circa 0.25 oz. gold per ton. A little custom smelting was done, when the smelter was in commission, to accommodate neighboring properties. Company was said, September, 1907, to have secured a site for a new smelter, at Christmas, about 1½ miles from the mine.

In addition to the railroad of the Phoenix & Eastern, the Southern Pacific is building a low grade cut-off line, to pass through the smelter site within a mile of the mine. The company did some grading, 1907, for a narrow railroad from Winkelman station to the mines and works at Christmas, having completed grading for 3 miles of line, except 3 or 4 short bridges, with rails, ties and one locomotive on the ground.

Production has been as follows: 450,000 lbs. fine copper in 1905; 2,338,492 lbs. copper, 16,410 oz. silver and 437 oz. gold in 1906; 1,751,864 lbs. copper, 7,453 oz. silver and 254 oz. gold in 1907.

Previous to blowing out of smelter the company made circa \$800,000 worth of matte, and, at one time, 1907, it employed nearly 600 men, but closed down Aug. 21, 1907, owing to financial trouble. The property is considered decidedly promising, but the company requires cash for more extensive development of ore, improvement of transportation facilities and enlargement of smelter.

#### SADO MINE.

JAPAN.

Owned by Mitsubishi Goshi-Kwaiisha.

#### SAGINAW DEVELOPMENT CO.

ARIZONA.

Dead. Merged, March, 1906, in American-Saginaw Development Co. Formerly at Bisbee, Cochise Co., Ariz. Described Vol. V.

**SAGINAW MINING CO.**

WASHINGTON.

Dead. Formerly at Maple Falls, Whatcom Co., Wash.

**SAGINAW VALLEY COPPER MINING CO.**

WYOMING.

Dead. Lands lost, 1905. Formerly at Encampment, Carbon Co., Wyo. Described Vol. V.

**SAHUARIPA EXPLORATION CO.**

MEXICO.

Mine office: Sahuatipa, Sonora, Mex. Lands include the Esperitu Santo mine, 12 miles east of Sahuatipa, opened circa 1842, and closed in 1906, owing to striking of water. This has a blanket vein of argentiferous and plumbiferous tetrabedrite, carrying up to 250 oz. silver per ton. Idle several years.

**ST. CROIX CONSOLIDATED COPPER CO.**

WISCONSIN.

Office and mine: Superior, Douglas Co., Wisc. Organized 1903, under laws of Wisconsin, with capitalization \$1,500,000, shares \$1 par. Lands, 9 groups, area 22,000 acres, carrying the western extension of the Keweenawan copper belt of Michigan. Idle since organization.

**ST. DAVID'S GOLD & COPPER MINES, LTD.**

WALES.

Dead. Succeeded, July 21, 1903, by St. David's Gold mines (1903), Ltd. Formerly at Barmouth, Merionethshire, Wales.

**ST. DAVID'S GOLD MINES (1903), LTD.**

WALES.

Office: 29 Cornhill, London, E. C., Eng. Mine office: Barmouth, Merionethshire, Wales. Godfrey C. Isaacs, chairman; E. T. McCarthy, consulting engineer; H. J. Nichols, mine manager; James Junner, secretary. Organized July 21, 1903, under laws of Great Britain, as a reconstruction of St. David's Gold &amp; Copper Mines, Ltd., with capitalization £60,000, shares 5s. par. Debentures, £40,000 authorized, £10,750 outstanding, at 6%. Old company paid dividends of 40%; present company has paid dividends of 10%. Lands, 800 acres, carrying gold and copper ores. Has a 50-stamp mill and an Elmore oil concentration plant.

**ST. GEORGE COPPER & COAL MINES, LTD.**

AUSTRALIA.

Office: Brisbane, Queensland, Australia. Mine office: Laura, Queensland, Australia. Organized 1906, under laws of Queensland, with capitalization £50,000. Lands are leasehold copper claims near Etheridge, in the Cook district, on which exploratory work has given promising results, also copper and coal lands at Little River.

**ST. GEORGE COPPER MINING CO.**

UTAH.

Office: care of Clarence K. McCormick, president, Salt Lake City, Utah. Mine office: St. George, Washington Co., Utah. Capitalization \$400,000. Grant C. Snyder, secretary and manager; B. L. Cutler, superintendent. Lands, in the Dugway Mountains, have a 100' main shaft, on a 4' to 5' vein, giving assays of 4 to 40% copper. Has gasoline power and a small smelter, and was doing systematic development work and levying assessments, at last accounts. Management considered good, and property well regarded.

**ST. HELEN'S COPPER CO., LTD.**

ENGLAND.

Works office: St. Helen's, Lancashire, Eng.

**ST. JOE GOLD-COPPER MINING & MILLING CO., LTD.**

MONTANA.

Office: Wallace, Idaho. Letter returned unclaimed from former mine office, Saltese, Missoula Co., Mont. Lands, 9 claims, well timbered, on Kelly Creek, circa 3 miles west of the Monitor, and one-half mile from a railroad, showing 2 strong ledges.

**ST. JOE MINING CO.**

UTAH.

Dead. Property sold, circa 1907, by sheriff, for \$25,000, this sum being inadequate to meet company's indebtedness, amounting to about \$60,000. Formerly at Bingham Canyon, Salt Lake Co., Utah.

**ST. JOE MINING & MILLING CO.**

WASHINGTON.

Office and mine: Latah, Spokane Co., Wash. Employs 5 men. I. H.

**Stockdale**, president; **J. W. Olney**, vice-president; **J. A. Adams**, secretary and treasurer; **E. H. Conrad**, superintendent. Organized 1906, under laws of Washington, with capitalization \$7,500,000, shares \$5 par. Annual meeting, last Monday in December.

Lands, 13 claims, one fractional, area circa 255 acres, well timbered, 15 miles from Chicago, Milwaukee & St. Paul railway, showing quartzite, with shafts of 20' and 80'. Property has 8 buildings. Company plans continuing tunnel, to cut an expected ore body at depth of circa 250'.

**ST. JOE MINING & MILLING CO.**

**WYOMING.**

Office: Fremont, Neb. Letter returned unclaimed from former mine office, Riverside, Carbon Co., Wyo. **H. S. Beck**, president; **J. H. Knowles**, treasurer; **Thos. Carroll**, secretary and general manager. Organized 1905, as successor of Fremont Copper Mining Co. Lands, 5 claims, unpatented, in Purgatory Gulch, opened by a 362' incline shaft.

**ST. JULIAN GOLD MINING CO.**

**MONTANA.**

Office: care of **W. A. Berney**, president, 61 East Warren Ave., Detroit, Mich. Mine office: Chico Park Co., Mont. Has auriferous and argentiferous copper ores, with steam power and an Elspass mill. Presumably idle.

**ST. LAWRENCE MINE.**

**MONTANA.**

Mine office: Saltese, Missoula Co., Mont. Lands are near the Richmond and Monitor mines, 6 miles southwest of Saltese, with ore opened on a vein lying parallel to those of the Richmond and Monitor. Idle.

**ST. LAWRENCE MINE.**

**MONTANA.**

Owned by Anaconda Copper Mining Co., at Butte.  
**ST. LOUIS COPPER CO.**

**ARIZONA.**

Dead. Formerly at Gila Bend, Maricopa Co., Ariz.

**ST. LOUIS COPPER CO.**

**MICHIGAN.**

Office: 12 Ashburton Place, Boston, Mass. Mine office: Calumet, Houghton Co., Mich. Organized under laws of Michigan, with capitalization \$1,000,000, shares \$25 par. Is controlled, through ownership of 36,400 shares out of 40,000 issued, by Calumet & Hecla Mining Co.

Lands, 800 acres, near Laurium, including the south half of Section 19 and west half of Section 20, Town 56 North, Range 32 West. Lands lie next south of the Old Colony, east of the Laurium and southeast of the Calumet & Hecla.

Property was called originally the New York & Michigan, opened 1844, under permit from the War Department, and later became the Washington, changing that name, eventually, to present title. In olden days a shaft was sunk at the point of junction between the trap belt and the Eastern Sandstone, this showing some fine copper. Long idle.

**ST. LOUIS COPPER MINING CO.**

**ARIZONA.**

Office: 503 Security Bldg., St. Louis, Mo. Mine office: Duquesne, Santa Cruz Co., Ariz. **Jas. W. Shaw**, president; **Silas Cook**, vice-president; **Geo. Hanlon**, secretary; **H. W. Herweek**, treasurer; **S. G. McWade**, general manager. Organized circa 1906.

**ST. LOUIS GOLD GULCH MINING CO.**

**NEW MEXICO.**

Mine office: Silver City, Grant Co., N. M. **G. A. Easton**, manager. Has gold and copper ores, and a 50-ton concentrator.

**ST. LOUIS UNITED COPPER MINING CO.**

**NEW MEXICO.**

Dead. Formerly at Jarilla, Otero Co., N. M.

**ST. MARIE COPPER CO.**

**COLORADO.**

Dead. Was a swindle, perpetrated by John Reilly and W. W. Wilson, two notorious confidence men. Formerly at Leadville, Lake Co., Colo.

**ST. MARY'S CANAL MINERAL LAND CO.**

**MICHIGAN.**

Entire stock issue is held by St. Mary's Mineral Land Co.

**ST. MARY'S COPPER CO.****MICHIGAN.**

Dead. Wound up, circa 1899, and lands sold to Arcadian Copper Co. Formerly at Hancock, Houghton Co., Mich. Described Vol. II.

**ST. MARY'S MINERAL LAND CO.****MICHIGAN.**

Office: 713-199 Washington St., Boston, Mass. Mine office: Houghton, Houghton Co., Mich. Employs circa 50 men. Nathaniel Thayer, president; Chas. J. Paine and J. Henry Brooks, vice-presidents; Chas. J. Paine, Jr., secretary and treasurer; preceding officers, Samuel N. Brown, Albert S. Bigelow, T. Nelson Perkins, Geo. P. Gardiner, Nathaniel H. Stone, Walter Hunnewell and Chas. H. King, directors; Fred W. Nichols, resident agent; Dr. Lucius L. Hubbard, general manager and consulting geologist; Rex E. Seeber, mine superintendent; Wm. Skewes, mining captain.

Organized March 4, 1901, under laws of New Jersey, with capitalization \$5,000,000, shares \$25 par; issued, \$4,000,000. Controls, through ownership of entire stock issue, except founders' shares, St. Mary's Canal Mineral Land Co., organized 1863, under laws of New York, to take over lands given by the state of Michigan for the construction of the first ship canal at Sault Ste. Marie, lands so given being 180,000 acres in Houghton, Ontonagon and Keweenaw counties, Michigan, from which tracts the Calumet & Hecla, Baltic, Trimountain, Champion, Ojibway and other mines have been developed. Company has circa 400 shareholders. Shares are listed on the Boston Stock Exchange. Old Colony Trust Co., Boston, registrar.

Dividends have been as follows: \$1 in 1903; \$1 in 1904; \$2 in 1905; \$4 in 1906; \$5 in 1907; nothing in 1908, giving a total of \$13 per share to end of 1908. The company is in receipt of a large income from dividends of the Champion Copper Co., receiving \$500,000 in 1907 and \$150,000 in 1908 therefrom, but in 1908 paid over \$220,534 to King Phillip Copper Co., hence paid no dividends. The company received, 1908, from lands sold to North Lake Copper Co., \$72,000 cash, in addition to a share interest. During 1905 the company sold lands, timber and wood, to the value of \$275,292, and during 1907 received \$1,800 on land payments, \$2,712 for wood and timber, \$2,147.72 ground rent, \$12,580.45 interest on notes and contracts, \$4,843.11 from miscellaneous sources, and \$500,000 from dividends of Champion Copper Co. Expenditures for 1907 included \$59,000 for the Challenge mine, and \$108,456 for stock of King Phillip Copper Co., company ending 1907 with \$237,390.94 cash on hand.

From 1863 to 1900 the old company paid cash dividends of \$2,200,000, also stock dividends of 1 share Tamarack, 1 share Iroquois, 1½ shares Baltic, ½ share Winona and ¼ share Albany & Boston, on each share of stock of St. Mary's Canal Mineral Land Co.

Share assets of the company at end of 1908 were as follows: 50,000 shares Champion Copper Co.; 73,767 shares King Phillip Copper Co.; 25,000 shares Mayflower Mining Co.; 20,165 shares La Salle Copper Co.; 20,000 shares Hancock Consolidated Mining Co.; 20,000 shares Pacific Copper Co.; 9,000 shares North Lake Copper Co.; 2,000 shares Ojibway Mining Co.; 842 shares Winona Copper Co.; 206 shares Copper Range Consolidated Copper Co.; 640 shares St. Mary's Mineral Land Co.; 80 shares Old Colony Copper Co.; 10 shares Amphidrome Co. These holdings in various corporations were worth about \$6,000,000, at end of 1908.

Lands, Jan. 1, 1908, were 95,158 acres freehold, also mineral rights to 14,323 acres additional, lands being scattered along the Lake Superior copper belt, with principal holdings on the South Range, southwest of Houghton, in Houghton and Ontonagon counties.

The Challenge mine, owned outright by the company, is in Section 22, T. 53 N., R. 35 W., circa 5 miles south of the Champion. This property works

4 power drills, and, during 1907, made 2,859' of openings. Extensive diamond drill borings having located what supposedly is the southern extension of the Baltic amygdaloidal bed. Sinking was begun, Sept. 10, 1904, and a vertical shaft, in the footwall, was 846' deep at end of 1907. Workings show considerable faulting, the Baltic bed having displacements of about 100', equal to a horizontal movement of 400'. The bed is 20' to 35' wide, shewing some heavy copper, in small pockets, at rare intervals.

In addition to the Baltic lode, a number of other cupriferous beds have been opened by crosscuts from the Challenge shaft. Bed No. 2 is an amygdaloidal conglomerate, apparently without workable values. Beds 3 and 4 are amygdaleoids, showing a little copper. Bed No. 5 is an epidotal amygdaleid, showing copper in promising quantities. Bed No. 6, circa 25' in width, carries no workable values. Bed No. 7, of 18' width, carries considerable stamp-rock. Bed No. 8 is 47' wide, where cut, carrying some fine copper. Bed. No. 9 gives a fair shewing of copper. Bed No. 10 apparently is of small promise.

Equipment at the Challenge includes a 12x20" Nordberg duplex hoist, good for 1,500' depth, and an 8-drill Nordberg air-compressor. The Challenge property is considered promising, though developments to date have proven disappointing.

Beginning with the new century, the company refused to sell its mineral lands outright, preferring to join its lands with other holders in the formation of new companies, taking pay therefor in shares, on a pro rata basis, or partly in shares and partly in cash. This policy involves heavy outlays for exploratory and development work, but has resulted in giving the company a half interest in a magnificent new mine, the Champion, which is capable, alone, of furnishing funds to St. Mary's company for both dividends and development work elsewhere, and a continuance of this policy must result, eventually, in making St. Mary's Mineral Land Co. the part or sole owner of a number of fine mines. Owing to the great extent of its lands, mainly located on the Keweenawan copper belt, and stretching along the mineral range for scores of miles, the landed holdings of the company are of vast potential value. The management is vigorous and far-seeing, and no small share of the credit for the present wise and successful policy is due to Mr. Rufus R. Goodell, who resigned, 1908, after 43 years of continuous and able service as the company's resident agent.

#### **ST. MICHAEL'S MINING, MILLING & REFINING CO. NEW MEXICO.**

Mine office: Tres Piedras, Taos Co., N. M. Long idle.

#### **ST. PAUL & BUTTE MINING CO. MONTANA.**

Dead. Was in business circa 1896. Formerly at Butte, Silver Bow Co., Mont. SAINT PAUL MINING & REDUCTION CO. COLORADO.

Mine office: Silverton, San Juan Co., Colo. D. M. Cleamon, Norwood Johnson, Geo. T. Braden, J. B. Ross and Frank L. Ross, directors. Organized circa March, 1908, under laws of Colorado, with capitalization \$100,000, shares \$1 par. Property is an old mine, in the Red Mountain district, formerly a producer, which shipped some ore netting \$1,000 per carload.

#### **ST. REGIS COPPER MINING CO., LTD. MONTANA.**

Office: Wallace, Idaho. Mine office: St. Regis, Missoula Co., Mont. Organized circa March, 1906. Lands, bought for \$35,000, show auriferous copper ore. Presumably idle.

#### **ST. REGIS COPPER MINING & MILLING CO. MONTANA.**

Office: Missoula, Mont. Mine office: St. Regis, Missoula Co., Mont. Employs 5 men. S. J. Wilson, president; F. W. Wilson, secretary and treasurer; Louis C. McHeffey, general manager; preceding officers, W. H. Houston and A. M. Stevens, directors. Organized May, 1901, under laws of Montana, with capitalization \$300,000, shares \$1 par, in half preferred and half common stock.

Lands, 5 claims, also a 15-mile railroad and miscellaneous lands, giving holdings of 180 acres, on the Northern Pacific railway, in an unorganized district of Sanders county, Montana. Property shows quartzite and shale, having 2 ore bodies under development, of 6' estimated average width, traceable circa 2,000', carrying chalcopyrite giving average assays of 6% copper and \$1.50 gold per ton. Property has shown ore assaying 16 to 37% copper. Development is by tunnels of 60', 380', 800' and 350', estimated to show 5,000 tons of ore.

**SALERIO MINES CO.****ARIZONA.**

Office: Tucson, Ariz. Mine office: Patagonia, Santa Cruz Co., Ariz. Prof. Wm. P. Blake, general manager; W. E. Balcom, superintendent. Is not incorporated. Lands, in the Salero and Tyndall districts, circa 12 miles northwest of Patagonia, include the old Salero and Tumacaeori properties, showing veins, traversing diorite, carrying galena, gray copper and native silver, in a gangue of manganese, spars and quartz, opened by a crosscut tunnel.

The Constitution or Darwin claim has a vein of 10' to 20' width, carrying chutes of high grade copper ore, including stromeyerite and its derivative minerals, with quartz gangue, opened by a vertical shaft and crosscut.

A third group is Moctezuma's Daughter and extensions, showing a wide ore body that has yielded high grade copper ore, mainly chalcocite and stromeyerite, from the Empress of India and Queen of Sheba claims. Property has steam power.

**SALIDA GOLD & COPPER MINING CO.****COLORADO.**

Dead. Formerly at Salida, Chaffee Co., Colo. Described Vol. V.

**SALIDO GOLD-COPPER CO.****MEXICO.**

Office: 824-356 South Spring St., Los Angeles, Cal. Letter returned unclaimed from former mine office, Alamos, Sonora, Mex. Dr. Finis E. Yoakum, president and general manager; N. N. Dietz, secretary. Organized under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Apparently is a twin of Los Alamos Mining & Milling Co. Lands, 30 pertenencias, in the Alamos district, said to show a 60' vein. Stock of the company is "insured" and "guaranteed," hence the company is looked upon as a mere stock-jobbing scheme. Any stock either "guaranteed" or "insured" is dangerous, and one that is both almost of a certainty must prove a very addled egg.

**SALISBURY COPPER CO.****NORTH CAROLINA.**

Office: P. O. Box 33, Salisbury, N. C. Mine office: Gold Hill, Rowan Co., N. C. T. B. Brown, president; W. S. Blackmer, secretary and treasurer; Richard Eames, Jr., general manager. Organized 1904, under laws of Arizona, with capitalization \$100,000, shares \$100 par.

Lands, 50 acres, freehold, on the line of the Southark railway, showing altered slate, carrying a fissure vein with NE. and SW. strike, formerly estimated at 15' average width, but now estimated at 4' width, developed by a 100' shaft, showing chalcopyrite, formerly reported as giving average assays of 15% copper, 2 oz. silver and \$5 gold per ton, but now reported to average 5% copper and \$5 gold per ton. Idle, but plans resumption and deepening shaft to 150'.

**SALMON RIVER MINING CO.****NEVADA.**

Mine office: Contact, Elko Co., Nev. Ores carry gold, silver and copper. Has gasoline power and a small smelter. Idle several years.

**SALMON RIVER MINING & MILLING CO.****WASHINGTON.**

Mine office: Comoxally, Okanogan Co., Wash. Wm. McDaniel, manager. Lands, on Peacock Mountain, are said to give a fair showing of copper. Development by tunnel was planned, at least accounts..

**SALTSESE CONSOLIDATED COPPER MINING & MILLING CO.****MONTANA.**

Office: 107 Second St., Moscow, Idaho. Mine office: Saltese, Missoula Co., Mont. C. H. Williams, vice-president and manager; Fred Willard, secretary; C. B. Merwin, treasurer. Capitalization \$1,500,000, shares \$1 par. Lands, 9 claims, showing 3 veins, including 6 claims on Deadman's Gulch, in the St. Regis district, near the National Mining Co., 6 miles from Saltese, having a 468' crosscut tunnel cutting a 4' vein, with 2' paystreak showing ore assaying up to 22.8% copper, 2.4 oz. silver and \$1 gold per ton.

**COMPANIA MINERA DE SALTILLO.****MEXICO.**

Office: 9a de Hidalgo, Saltillo, Coah., Mex. Letter returned unclaimed from former mine office, Concepcion del Oro, El Oro, Zacatecas, Mex. Antonio Rodriguez, president; Ramon Rodriguez, manager. Property is the Jesus Nazareno mine, having auriferous and argentiferous lead and copper sulphides. Has steam power, employing circa 150 men, and, first half of 1907, was producing, monthly, circa 1,000 metric tons of silver-lead ore, of good average tenor.

**SALT LAKE COPPER CO.****UTAH.**

Office: 11 Broadway, New York, N. Y. Operating office: Herald Bldg., Salt Lake City, Utah. Mine office: Lucin, Box Elder Co., Utah. J. H. Susmann, president; Frederick Lewisohn, vice-president; E. C. Westervelt, treasurer; preceding officers, Adolph Lewisohn, Alfred Lewisohn, O. B. Van Sant, Andrew Sakes and J. E. Shoenberg, directors; J. Parke Channing, consulting engineer; E. G. Tuttle, superintendent. Organized circa December, 1906, under laws of Maine, with capitalization \$2,200,000, shares \$10 par. Debentures, \$236,000, at 6%, payable only out of net earnings. Net profits, 1907, are said to have been circa \$120,000.

Lands, 108 acres, on Copper Mountain, in the Newfoundland district, also 100 acres within the limits of Salt Lake City. Mine has upwards of 2 miles of workings, and was estimated, 1908, to have in sight and blocked out, 75,306 tons of copper ore of 1.1% average tenor, 27,960 tons of 3.13% average tenor, and 138,370 tons of 7.2% copper tenor. Production, 1907, was circa 24,000 tons of ore, shipped to Salt Lake smelters, yielding 2,284,446 lbs. fine copper. Property considered promising and management good.

**SALT LAKE & ELY COPPER CO.****NEVADA.**

Office: Salt Lake City, Utah. Mine office: Ely, White Pine Co., Nev. Jas. T. Finlen, president; G. L. Rickard, vice-president; W. W. Byrne, secretary and treasurer; preceding officers, Ernest E. Campbell and John A. Kirby, directors. Organized 1906, with capitalization \$5,000,000, shares \$1 par. Lands, 11 claims, said to be in the vicinity of the Cumberland-Ely. Presumably idle.

**SALT LAKE MINING & MILLING CO.****UTAH.**

Letter returned unclaimed from former office, Provo, Utah. Mine office: Callao, Juab Co., Utah. W. B. Hughes, president; D. B. Hughes, secretary and treasurer. Organized 1907, with capitalization \$100,000, shares 10 cents par. Lands are in the Detroit district. Presumably idle.

**COMPANIA MINERA SALVADORA DEL HUANACO DE TALTAL. CHILE.**

Office: Iquique, Chile. Mine office: Taltal, Antofagasta, Chile. Organized March 17, 1905, under laws of Chile, with capitalization £12,000, shares £5 par.

**SAMPO MINING & DEVELOPMENT CO.****FINLAND.**

Dead. Was succeeded, December, 1906, by Finnish American Mining Co. Formerly at Kisko, Abo, Finland. Fully described Vol. VI.

**COMPANIA MINERA DE SAN ACASIO y ANEXAS.****MEXICO.**

Mine office: San Juan de Guadalupe, Durango, Mex. Property includes

the San Acasio and Tres Rosas mines, carrying gold and copper ores. Has steam power, employing circa 50 men.

**COMPAÑIA MINERA DE SAN ANTONIO.****MEXICO.**

Dead. Formerly at La Cruz, Centro, Tamaulipas, Mex.

**SAN ANTONIO COPPER CO.****MEXICO.**

Office: Iron Mountain, Mich. Mine office: San Antonio de la Huerta, Ures, Sonora, Mex. O. C. Davidson, president; preceding officer, D. G. Kerr, John Uno Sebeniús, C. D. Frazer, Col. Louis W. Powell and Richard C. Flanagan, directors. Organized circa October, 1908, under laws of Arizona, with capitalization \$2,500,000, shares \$10 par; issued, \$2,000,000.

Lands, 9 groups, area circa 2,000 acres, near the Yaqui river, showing a mineralized zone of approximately 200' to 500' width.

Development, which has been in progress since circa 1906, is by tunnels, which can be driven to give backs of about 1,100', and considerable ore of good average copper tenor has been blocked out, ores including high grade oxides and carbonates, and sulphides of good average tenor. The management is composed of strong, experienced and thoroughly capable mining men.

**SAN ANTONIO MINING CO.****COLORADO.**

Office: 312 Century Bldg., Denver, Colo. Mine office: Red Mountain, Ouray Co., Colo. Employs circa 50 men. M. T. Chestnut, president and general manager; Otto Koehler, vice-president; Wm. L. Stephens, secretary and treasurer; preceding officers, E. B. Morgan and Wilbur M. Warnock, directors; John F. Roper, mine superintendent. Organized Feb. 5, 1908, under laws of Colorado, with capitalization \$500,000, shares \$1 par. Annual meeting, last Tuesday in February.

Lands, 30 claims, area circa 200 acres, a 20-acre millsite and 10 acres miscellaneous lands, one mile from a railroad, in the Red Mountain district of Ouray and San Juan counties. Property shows porphyry, carrying several ore bodies, estimated at 20' to 30' width, said to be traceable more than 3,000', reported by company to carry enargite averaging 12% copper, 10% lead, 10 oz. silver and \$3 gold per ton, which estimate is considered high. Development is by shafts of 37' and 200', and by the 200' Koehler tunnel and 625' Camp Robber tunnel, with a total of 1,200' of workings, reported to give 1,000 tons of ore blocked out for stoping.

Equipment includes a 5-h. p. air-compressor and 3 power drills. There are 10 mine buildings and dwellings. Company plans extending the Koehler tunnel 2,300', and installing a more powerful mining plant.

**SAN ANTONIO MINING & EXPLORATION CO.****MEXICO.**

Mine office: Tapalpa, Sayula, Jalisco, Mex. John P. Johnson, president; José Gonzalez Brizuela, secretary; B. S. Dewey, treasurer. Has surface ores assaying 6% copper, 750 grams silver and 15 grams gold per metric ton.

**SAN BALTAZAR COPPER CO.****MEXICO.**

Office: 508 Germania Bank Bldg., Pittsburg, Pa. Mine office: Tlachula, Oaxaca, Mex. J. Albert McKay, president; Hon. Pembrook R. Fliterraft, vice-president; Oscar A. Rogers, secretary; Andrew B. Berger, treasurer; Guillermo W. Thompson, general manager; Frank M. Lehmer, superintendent. Organized Dec. 14, 1904, under laws of Maine, with capitalization \$1,000,000, shares \$10 par; issued, \$780,000.

Lands are several groups, area 700 acres, and a 40-acre millsite, in the Tlachula district, 8 miles south of the ruins of Mitla. Country rocks are porphyry and limestone, carrying numerous contact veins or lenses, of which 6, under development, are reported to have an average width of 8'. outcropping for 2 miles. At last accounts mine had a 50' shaft, showing selected oxide and carbonate ores of 44% copper tenor, while assays of outcrops give 1 to 15%.

copper, 15 to 20 oz. silver and from nothing to 16% lead. It is planned to develop mainly by tunnels. Property considered promising.

**SOCIEDAD MINERA DE SAN BARTOLO.** CHILE

Office: Santiago de Chile. Mine office: Gatico, Antofagasta, Chile. Organized Aug. 8, 1905, under laws of Chile, with capitalization \$120,000, shares \$1 par. Lands show 5 sandstone beds carrying disseminated native copper. Early 1908 was building a 200-ton mill, of modern design and equipment, with a view to beginning regular production on a considerable scale.

**SAN BARTOLO COPPER MINES, LTD.** CHILE

Dead. Voluntarily liquidated, 1903. Formerly at Gatico, Antofagasta, Chile.

**SAN BERNARDINO COPPER CO.**

Dead. West Virginia charter forfeited, 1902. Formerly in San Bernardino Co., Cal.

**SAN BERNARDINO GOLD, COPPER & LIME CO.** CALIFORNIA.

Letter returned unclaimed from former mine office, San Bernardino, San Bernardino Co., Cal. F. G. Stickney, president; W. H. Miller, secretary and treasurer; preceding officers, I. F. Swarthout, Sydney Swarthout and H. M. Swarthout, directors. Organized circa June, 1907, under laws of Arizona, with capitalization \$1,000,000. Lands, in Badger Cañon, on Little Mountain, 7 miles north of San Bernardino, show a body of auriferous and argentiferous copper ore with limestone hanging, said to be 100' wide at point of exposure. Has an incline shaft and a 300' tunnel. Idle and apparently moribund.

**SAN BERNARDINO MINING CO.** MEXICO.

Office and mine: Schalk Bldg., La Cananea, Arizpe, Sonora, Mex. A. S. Judd, president; J. L. Stroyick, vice-president and superintendent; J. M. Gibbs, general manager; B. N. Norton, consulting engineer. Organized under laws of United States and Mexico, with capitalization \$500,000, shares \$5 par.

Lands, 144 pertencias, 18 miles southeast of Cananea, 2 miles west of a railroad, in the Sierra Manzanal, developed by a 100' shaft, showing a 6' vein carrying auriferous copper ores giving assays up to 30% copper, 70 oz. silver and \$8 gold per ton. Small shipments, to El Paso smelter, netted \$93 per ton. Was worked, circa 1876, for silver, but suspended, owing to raids of Apaches. Property is considered promising, but is idle.

**SAN BERNARDINO MINING CO.** MEXICO.

Mine office: La Cananea, Arizpe, Sonora, Mex. J. M. Gibbs, manager. Property shows auriferous and argentiferous copper ore. Presumably idle.

**SAN BERNARDINO MINING & MILLING CO.** ARIZONA.

Dead. Formerly at Douglas, Cochise Co., Ariz. Fully described Vol. VII.

**SAN BERNARDO MINING CO.** MEXICO.

Office: 920 Merchants' Loan & Trust Bldg., Chicago, Ills. Mine office: Aduana, Alamos, Sonora, Mex. Mine, known as the Santo Domingo, has a shaft sunk between two veins, known as the Balvanera and Santo Domingo, which are expected to unite at depth. Ores give assays of 46 oz. silver, with small copper and lead values. Idle and apparently moribund.

**SAN BERNABDO MINING CO.** MEXICO.

Mine office: Alamos, Sonora, Mex. Is the Mexican incorporation of the Southern Sonora Development Co., and is controlled by Sonora Central Mines Co.

**SANCA CONSOLIDATED MINING CO.** IDAHO.

Office: Detroit, Mich. Mine office: Priest River, Kootenai Co., Idaho. Jacob Haarer, president; Lou Burt, first vice-president; O. R. Baldwin, secretary and treasurer. Organized under laws of Arizona, with capitalization \$3,500,000, shares \$1 par.

Lands, 540 acres, in the Priest River district, in the extreme northern part of Idaho, lacking rail transportation. Camp No. 1 has seven 20' pits, with

several hundred feet of development. Camp No. 2 has several hundred feet of development, said to show a 30' vein giving ore assaying well in copper, silver and gold. Camp No. 3 has eight 10' pits. Camp No. 4 has several hundred feet of crosscut tunnels, said to develop 2 veins, with thickness 800'. **SAN CARLOS AND MEXICO & SOUTHERN CO.** ARIZONA.

Letter returned unclaimed from former office, 211 Geary St., San Francisco, Cal. Mine office: Calabasas, Santa Cruz Co., Ariz. Lands, 12 claims in 2 groups, in Santa Cruz and Miami districts, from which selected samples have given assays up to 9% copper, 400 oz. silver and \$2.50 gold per ton. Idle and apparently moribund.

**SAN CARLOS COPPER CO.** ARIZONA.

Dead. Lands sold to Saddle Mountain Mining Co. Formerly at Christmas, Gila Co., Ariz.

**SAN CARLOS COPPER CO.** MEXICO.

Office: 1747-25 Broad St., New York, N. Y. Mine office: Linares, Sexto, Nuevo Leon, Mex. Works office: San Jose, Centro, Tamaulipas, Mex. W. H. Nichols, Jr., president; S. H. Steele, secretary and treasurer; Edw. D. Self, general manager. Organized 1896, under laws of New York, with capitalization \$200,000, shares \$1 par.

Mining lands, 6 square miles, are in the San Carlos district of Tamaulipas. Also owns 6,400 acres of timber lands. Has contact veins between limestone and porphyry, carrying oxide, carbonate and sulfide ores, mainly latter. Development is by upwards of 50 shafts and about 7 miles of tunnels, with total workings of circa 10 miles. Has a 38-mile railroad connecting with the Gulf branch of the Mexican Central Railway, which, in addition to handling company's own traffic, enjoys a very satisfactory general business. Closed down, early 1907, laying off circa 500 men.

**SAN CARLOS DEVELOPMENT CO.** ARIZONA.

Office and mine: Globe, Gila Co., Ariz. W. C. Duncan, general manager. Lands, known as the Cobre Verde group, include the Annie Rooney mine, once held by the Spencezana swindle. Has shafts of 42' and 82', showing 2 veins, 1 about 3' wide. Was developing at last accounts.

**SAN CRISTOBAL COPPER CO.** NEW MEXICO.

Office: 616-116 Broad St., New York, N. Y. Mine office: Arroyo Seco, Taos Co., N. M., Richard Hopkins, president; B. F. Shakespeare, secretary; J. K. Turner, manager; Geo. Oates, superintendent. Organized circa 1901, as successor of Rio Hondo Copper Mining Co. Lands, 1,850 acres, also sundry water-rights and a railroad franchise. Mine has an 80' ore body, carrying copper, gold, silver and lead, opened by a 1,000' tunnel. Is said to have bought the Hawkeye group, near Amizette, Taos county. Has a smelter and cyanide plant. Original development was for copper, but later operations have been confined to developing a big ledge of gold-bearing quartz.

**COMPANIA MINERA SAN DIEGO.** MEXICO.

Letter returned unclaimed from former mine office, Parras de la Fuente, Parras, Coahuila, Mex. Has auriferous and argentiferous copper ore. Idle.

**SAN DOMINGO GOLD & COPPER CO.** ARIZONA.

Dead. Merged, circa 1903, in Pescado Blanco Mining Co. Formerly at Morristown, Maricopa Co., Ariz.

**MINE SAN DOMINGOS.** MEXICO.

Owned by Mason & Barry, Ltd.

**SAN FELIPE MINING CO.** MEXICO.

Office: Philadelphia, Pa. Mine office: Moctotipaquilé, Ahualulco, Jalisco, Mex. Col. N. Z. Seitz, president and general manager; Geo. F. Rose, superintendent. Organized 1902, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Development is by a tunnel planned to be driven 3,000', to

cut the San Felipe veins at depths of 1,600' and 3,200'. Has a mill, rated at 50 tons daily capacity, planned to be remodeled. Paid dividends from stock sales, hence is viewed with much suspicion.

#### **COMPÀNIA MINERA DE SAN FERNANDO.**

MEXICO.

Mine office: Zimatlán, Oaxaca, Mex. Múñoz Gómez, manager. Has auriferous copper and argentiferous lead ores, employing circa 40 men, at last accounts.

#### **SAN FERNANDO COPPER MINING & SMELTING CO.**

MEXICO.

Office: 3637 Fourth St., San Diego, Cal. Mine office: Ensenada, Norte, Baja California, Mex. F. M. Woods, president; H. E. Woods, vice-president; Warren Woods, treasurer; E. C. Humphrey, manager.

Lands, 180 pertenencias, area 445 acres, in the San Fernando district, circa 240 miles below the California line, 25 miles east of San Carlos Landing, on the Pacific, and 80 miles southeast of the harbor of San Quintín, with a good wagon road from mine to the landing. Mine, discovered by the San Franciscan friars, early in the Nineteenth Century, is said to have produced upwards of \$500,000, from ore shipped, via San Francisco, to Liverpool, ore ranging as high as 50% in copper tenor, with good gold and silver values. Property shows numerous veins of 3' to 5' width, carrying carbonate ores at surface, changing at depth to chalcopyrite. Shipments by present owners have averaged circa 20% copper. Equipment includes a hoist, pumps and laboratory. Has steam power and a 50-ton smelter, employing circa 30 men at last accounts.

#### **SOCIEDAD ANONIMA INDUSTRIAL DE MINAS DE COBRE**

CUBA.

#### **SAN FERNANDO y SANTA ROSA.**

Dead. José F. Santa Eulalia, was president. Property was the Finea San Joaquin, circa 30 miles northeast of Cienfuegos and about 12 miles west of Manicaragua. The mine, 4 miles north of the Rio Mayo, was worked on a considerable scale, beginning circa 1865, and shipped, 1868, to Swansea, 3,258 tons of ore of 19.7% average copper tenor. Was last worked 1883-1885, suspending because of a revolution. The vein ranges up to 30' in width, carrying cuprite, melaconite, azurite and chalcopyrite. Property has been idle for some years. Company's office formerly was at Havana, Cuba. Formerly at Santa Clara, Santa Clara Province, Cuba.

#### **COMPÀNIA MINERA DE SAN FRANCISCO DEL AZUL.**

MEXICO.

Mine office: Matehuala, Catorce, San Luis Potosí, Mex. W. B. A. Dingwall, manager. Property includes the San Francisco and San Miguel mines, carrying gold, silver and copper ores. Has steam power, lixiviation plant and a 50-ton mill, employing circa 100 men.

#### **SAN FRANCISCO DEL ORO MINES, LTD.**

MEXICO.

Office: 65 London Wall, London, E. C., Eng. Mine office: Parral, Hidalgo, Chihuahua, Mex. Earl of Denbigh, chairman; James E. Hyslop, manager; Harold A. Searle, secretary. Organized Apr. 18, 1903, under laws of Great Britain, with capitalization £375,000, shares £1 par; issued, £330,000. Lands, 253 acres, 14 miles southwest of Parral, carrying gold, silver, copper, lead and zinc ores, undergoing development. Shipments are made to nearby smelters, and profits earned in first 18 months are given by company as in excess of £22,000. Was building a 200-ton mill, 1907.

#### **SAN FRANCISCO MINING CO.**

MEXICO.

Office: care of J. G. Pritchard, vice-president and general manager, Bisbee, Ariz. Mine office: San Felipe, Arizpe, Sonora, Mex. H. M. Whitney, president; Fred C. Hagen, secretary; W. E. Tester, assistant secretary; J. W. Wood, treasurer; Peter Fitz, superintendent. Organized Oct. 23, 1905, under laws of Arizona, with capitalization \$60,000, shares \$10 par. Lands, 16 pertenencias, also exploratory rights over 4 square miles of adjacent lands. Prop-

erty shows several veins of 30" to 9' width, giving good assay values, mainly in gold and silver, with from a trace to 7.19% copper, and up to 50% lead. Presumably idle.

**SAN FRANCISCO MINING CO.** MEXICO.

Mine office: Autlán, Jalisco, Mex. L. E. Fuller, president. Organized 1905. No trace of operations.

**NEGOCIACION MINERA SAN FRANCISCO Y ANEXAS.** MEXICO.

Dead. Formerly at Asientos, Ocampo, Aguascalientes, Mex.

**SAN JAVIER COPPER CO.** MEXICO.

Office: 800-189 La Salle St., Chicago, Ills. Mine office: San Javier, Alamos, Sonora, Mex. Jacob J. Smith, president; Chas. F. Sollars, vice-president; Chesley R. Perry, secretary; W. Schellinger, mine manager. Organized April, 1907, under laws of South Dakota, with capitalization \$5,000,000, shares \$1 par, and is incorporated under laws of Mexico with same title. Lands, said to be 3 groups, are said to carry high grade argentiferous copper ore. In advertisements, October, 1907, promised a dividend within 6 months, but apparently dividend failed to materialize. Is not regarded favorably.

**FINCA SAN JOAQUIN.** CUBA.

Owned by Sociedad Anonima Industrial de Minas de Cobre San Fernando y Santa Rosa.

**MINA SAN JOSÉ.** CHILE.

Office and mine: care of Silva y Rivas, owners, Tamaya, Ovalle, Coquimbo, Chile. Mine, opened 1844, is 517' deep. Idle at last accounts.

**SAN JOSÉ CONSOLIDATED MINING CO.** MEXICO.

Mine office: Moctezuma, Sonora, Mex. Organized under laws of Arizona and protocolized in Mexico. Lands, circa 100 acres, lying near the Moctezuma Copper Co., showing a vein of 5' to 12' width, carrying values mainly in silver and lead, with small gold and copper values. Presumably idle.

**SAN JOSÉ MINING CO.** CUBA.

Dead. Succeeded, circa 1902, by El Cobre Mines. Formerly at El Cobre, Santiago de Cuba.

**MINAS SAN JOSÉ Y OTRAS.** SALVADOR.

Office and mines: care of Luna Hermanos, owners and managers, Melapán, Santa Ana, Salvador. Has auriferous and argentiferous copper ores, with steam power, and a small and antiquated smelter, employing circa 250 men, at last accounts.

**COMPAÑIA MINERA SAN JUAN.** MEXICO.

Mine office: Muleje, Sur, Baja California, Mex. Presumably idle.

**MINA SAN JUAN.** SPAIN.

Mine office: Paimogo, Huelva, Spain. D. José De Soto, manager. Lands, 102 hectares, including 4 old mines. Idle.

**SOCIEDAD MINERA SAN JUAN.** CHILE.

Office: Calle Prat, 55, Valparaiso, Chile. Mine office: Higuera, La Serena, Coquimbo, Chile. Employs 170 men. Guillermo Lyon, president; José María Muñoz, managing director; preceding officers, E. A. Sandiford, Ruperto Alvarez and Cirilo Armstrong, directors; Miguel Scantlebury, general manager; Ricardo Spargoe, mine superintendent; Ricardo Everett, smelter superintendent. Organized Feb. 17, 1906, under laws of Chile, with capitalization 1,000,000 pesos, in 300,000 pesos preferred and 700,000 pesos common shares, par 20 pesos, 10 pesos paid in. Semi-annual meeting, March and September.

Lands, 29 claims, area 66 hectares, also a 9-hectare millsite. Country rocks are granite and diorite, showing 8 strong parallel veins, opened by a large number of tunnels and by the following shafts: Casas, 70'; Ajo, 500'; Aguilas, 240'; Rosario, 300'; Cenicera, 240'; Caprichosa, 700'; San Juan, 1,200';

Tarma, 200'; San Pablo, 600'. Mines are estimated to have 20,000 tons of ore blocked off for stoping.

Mines, opened 1820, have been in continuous operation since. Power plant includes 6 hoists, good for 1,000' depth-each; 7 driving engines, and a Siemens & Halske electric plant for lighting purposes and for driving 4 electric rock drills, of the same make. Buildings include a 100x100' machine-shop, a 30x30' carpenter shop and a 30x30' smeltingy, all of wood, and about 50 dwellings for employees.

Company has two smelters, one at Las Casas mine, and the other, which is the more important, in a valley below and about one mile distant from the mines, from which ore is received in carts. The two smelters have a combined capacity of 230 tons daily. Equipment includes 12 kiln calciners, a 120-ton rectangular blast-furnace and seven 16-ton reverberatory furnaces. Product is a matte of 50% average copper tener, sent to the works of the Sociedad Chilena de Fundiciones, at Guayacán, for refining. Nearest shipping point is the port of Potoralile, distant 9 miles from the smelter. Fuel is soft coal, costing 30 pesos per ton, and coke, costing 35 pesos per ton, Chilean. Average cost of mining is 3 pesos per long ton, and of smelting, 30 pesos per ton. Ores treated average 8% copper. Production, first 5 months of 1906, was circa 1,000 tons fine copper, and for 1907 is estimated at 4,000,000 lbs. fine copper.

#### **SAN JUAN BAUTISTA MINING CO.**

**COLORADO.**

Office: 519 Ouray Bldg., Washington, D. C. Mine office: Motterzama, Sonora, Mex. Dr. F. S. Chamberlain, president; A. G. Drake, secretary and manager; Wm. Carter, treasurer; Geo. F. Woodward, general manager; Wm. M. Reese, superintendent; A. J. Klidé, assistant superintendent. Organized March, 1906, under laws of Arizona, with capitalization \$5,000,000, shares \$10 par.

Lands, 19 claims, on El Cerro Rosario, including antigua showing large slag piles remaining from ancient smelting operations. Property carries a mineralized zone circa 1,000' wide, traceable about 1,500', between limestone and porphyry. Development is by a 2-compartment 100' shaft on the Rosario claim, also shafts of 50' and 126' on other claims. La Bronzosa mine carries argenteite, stephanite and chalcopyrite, associated with pyrite, and La Cobriza mine is said to show 30' of ore carrying highly argentiferous cuprite. Property has yielded ores assaying up to \$300 gold per ton.

#### **MINA SAN JUAN DE MALAJA.**

**CUBA.**

Mine office: Santa Clara, Santa Clara, Cuba. Lands, 6 miles northeast of Santa Clara, showing a 100' gossan, are but slightly developed, and have been idle many years.

#### **SAN JUAN MINING CO.**

**COLORADO.**

Mine office: Central City, Gilpin Co., Colo. Ores carry gold, silver and copper. Has steam power. Presumably idle.

#### **SAN JUAN SMELTING & REFINING CO.**

**COLORADO.**

Office: Exchange Bldg., Denver, Colo. Letter returned undelivered from former mine office, Silverton, San Juan Co., Colo. Wm. Oliver, president; W. F. Kendrick, vice-president; John B. Humphrey, secretary; preceding officers, Wm. F. Ford, John Colquhoun, Geo. P. Peck, C. I. Gagnier and John M. Drake, directors; Samuel H. Dresbach, superintendent.

Organized 1903, under laws of Colorado, with capitalization \$3,000,000, shares \$1 par, as a consolidation of Kendrick & Gelder Smelting Co., Oliver Mining Co. and Paradox Copper-Gold Mining Co. Bonds, \$250,000 authorized; issued, circa \$100,000. Interest rate on bonds is variously reported as 6% and 10%. In March, 1907, was offering \$100,000 of 10% bonds, at par. On June 27, 1908, authorized an issue of \$300,000 ten-year refunding bonds, at 6%, secured by mortgage, but a shareholder secured a court order preventing the issue of these bonds, because property was in hands of a receiver when bond

Issue was authorized, illegally. Interest on the \$100,000 bond issue was defaulted March 1, 1908, and receivers appointed, the foreclosure proceedings brought by reason of default in interest apparently being in the nature of a friendly action, at the start, but becoming unfriendly later on. At last accounts, June, 1908, property was held, under tax-title, by E. C. Drew, as trustee.

Lands, circa 40 claims, 10 patented, including a millsite one mile below the Henrietta mine, lying mainly on Eureka Mountain, with 3 claims in Cinnamon Gulch, on the line of the Silverton, Gladstone & Northern Railroad, 7 to 10 miles from Silverton. Part of company's former landed holdings were under bond and lease, partly paid, to Ross Mining & Milling Co., at last accounts.

The principal property is the Henrietta mine, carrying auriferous and argentiferous copper ores, opened by a long crosscut tunnel, estimated by company to show circa 400,000 tons of ore, of about \$15 average value, blocked out for extraction, which figures are considered exaggerations. The Henrietta is said to show occasional chutes of high grade smelting ores, up to 20 and 30% in copper tenor, with smelting ore averaging about 7% in copper tenor, and milling ore averaging circa 3.5% copper. The mine has gasoline and electric power.

The smelter, said to have been renovated, 1905-1906, is held under bond and lease by Ross Mining & Milling Co. The reduction plant included a 400-ton concentrator and 200-ton smelter. The Henrietta mine does not seem to impress the people at Silverton as an especially remarkable property, and the company is in exceptionally bad shape, with every prospect of a total smash.

#### SAN LUCAS COPPER CO.

MEXICO.

Mine office: Choix, Fuerte, Sinaloa, Mex. Entire stock issue is owned by El Magistral Copper Co.

#### COMPANIA MINERA SAN LUIS.

MEXICO.

Dead. Formerly at Tepezalá, Ocampo, Aguascalientes, Mex.

#### SAN LUIS MINING CO.

MEXICO.

Office: 1104-27 William St., New York, N. Y. Mine office: Gabriel, Durango, Mex. John G. Gibbons, president; W. J. Robinson, vice-president; Myra B. Martin, secretary and treasurer; Col. Britton Davis, managing director; preceding officers, Seymour W. Tulloch, Angel L. Negrete, J. Edward Layne, Walter S. Perry and Hollister S. Logan, directors.

Organized Nov. 16, 1900, under laws of West Virginia, and capitalization increased, 1905, to \$8,000,000, shares \$1 par. First dividend, 1%, was paid January, 1906, and a second dividend was paid July, 1906, both unearned. Annual meeting, second Wednesday in April.

Lands, 806 pertenencias, area 1,241 acres, in 64 groups, also a 25-acre millsite, in the San Lucas and Pánuco de Coronado districts of Durango. Company also claims to hold El Cura ranch, area 35,000 acres.

The mineral property shows limestone and porphyry, carrying fissure veins and contact deposits, company reporting 64 ore bodies, of which 6, under development, were estimated, by company, to average 3% copper, 12% lead, 1% zinc, 35 oz. silver and \$4 gold per ton, mainly from sulphide ores, the company claiming, at end of 1905, to have 17,314' of workings estimated to show 300,000 tons of ore, with 200,000 tons blocked out, which figures are not credited, because of the phenomenal untruthfulness of some of its officers. The mines were discovered circa A. D. 1650, and worked, more or less irregularly, until 1880, when closed, on account of water and Indian troubles, remaining idle until reopened, 1901, by present company.

The San Luis mine shows a considerable body of copper ore, of low average tenor, with some high-grade silver ore.

The Potosina mine, with 1,994' of workings, is said to show, at the western end, a considerable body of ore of smelting grade, and a large quantity of milling ore.

The San Gonzalo mine, 350' deep, shows low-grade ores, carrying mainly silver values above, with copper on the lower levels.

The Castillana mine, adjoining the San Gonzalo on the east, with a continuation of the vein of the latter, is said to have been proven for a distance of 1,600', by trenches and pits of 10' to 80' depth, and has an idle 120' shaft.

The Sidney mine has a shallow shaft, showing a 2' vein of galena, giving assays up to 45% lead, 40 oz. silver and 3 grams gold per ton, but has been idle for some years, on account of a heavy inflow of water.

The San Lucás mine, area 19 hectares, 35 miles northwest of Gabriel, is an old property, claimed to have nearly 2 miles of workings, carrying mainly lead and zinc.

The Aventura mine, adjoining the San Lucás, shows a heavy gossan, with an old shaft opening a 3' vein of carbonate ore, said to give assays of 32% copper and 12 grams gold per ton.

The San Pablo mine shows parallel veins said to carry 6" to 36" pay streaks of sulphide ore, giving assays up to 16% copper, 360 oz. silver and 14 grams gold per ton. Development is by an abandoned incline shaft, and a 175' vertical shaft, latter equipped with gallows-frame and hoist.

Equipment includes steam plants, said to aggregate 750 h. p., with 6 hoists and 2 Ingersoll-Sergeant air-compressors, of 12 drills combined capacity.

Buildings are said to include a 25x150' stone machine-shop, 25x150' wooden carpenter-shop, stone smithy, offices, 4 general stores and a large number of dwellings for workmen, with a total of 175 buildings.

The 60x180' mill, of adobe and iron, is equipped with 2 crushers, 1 jig and 4 Bartlett tables. Concentration seems to have proven more satisfactory than leaching.

The Trinidad leaching mill, of 120 tons claimed daily capacity, has 2 calcining furnaces, for roasting ore before leaching, and apparently treated only about 40 tons daily, when in operation.

Production, 1905, was reported as 30,725 tons of ore, of which 5,845 tons were shipped to smelters, 6,481 tons were leached, and 15,118 tons were concentrated. Production, 1905, was reported as circa 450,000 lbs. fine copper, and net earnings, 1905, were claimed to be 277,530 pesos.

John G. Gibbons, a director, brought suit, 1907, in the Supreme Court of Mexico, to recover \$500,000, alleged to have been lost or wasted by the late "Gen." Walter S. Logan, a notorious shyster lawyer, who died July 19, 1906, the title boasted by the "general" having been acquired as former president of the "Sons of the American Revolution," which is greatly to the credit of that body of patriots, who permitted their ancestors to bleed for the cause of liberty. The suit of Mr. Gibbons includes proceedings against Myra B. Martin and the Logan Estate, also including Hon. Geo. B. Agnew and Col. Britton Davis.

The debts of the company were claimed, in 1905, to have been paid, notwithstanding which the capitalization of the company was increased, and the payment of dividends begun, simultaneously with the selling of treasury stock, which was a deliberate and intentional swindle on the part of the management, which has been connected with some of the most notorious mining frauds dividends of fabulous size, and Miss Martin and the balance of her gang now of the United States, including the George A. Treadwell and Copete companies. The company promised, over the name of the notorious Myra B. Martin, accuse Louis Ross, formerly general manager in Mexico, of bad management and making misleading reports that caused the company to pay dividends

As a matter of fact, Mr. Ross is one of the few honest men ever connected officially with this company, and his management, instead of being bad, was exceptionally good—in fact, his conduct of the company's mining affairs was so unexpectedly capable that the Logan gang, which obviously started the San Luis as a mere bit of stock-jobbery, came to the conclusion that the mine was valuable, hence wrecked the company, in accordance with the piratical methods employed by this outfit in all of its mining deals.

Despite the efforts of Mr. Ross and a few other honest men, the company borrowed money, 1906, or at least is supposed to have borrowed money, according to the records, from some of the parties connected with the outfit, and October, 1908, judgment was taken, by default, for \$51,000, in favor of Hon. Geo. B. Agnew, on 2 notes, made 1906, running for 18 months, payable to Myra R. Martin.

The newspapers that accepted the putrid advertising of this rotten concern, well knowing it to be a swindle, are now foremost in their denunciations of the company, there being no further revenue derivable from the printing of the company's lies. Property considered valuable, but the company is a swindle.

**SAN MARCUS-SALOME DEVELOPMENT CO.****ARIZONA.**

Office: Pittsburgh, Pa. Mine office: Salome, Yuma Co., Ariz. Lands are about 4 miles from the Socorro mines, in the Harqua Haia Mountains. Presumably idle.

**COMPÀNIA MINERA SAN MARTIN y ANEXAS, S. A.****MEXICO.**

Office: Oaxaca, Mex. Mine office: San Martín de los Cenocios, Oaxaca, Mex. Employs 124 men. Frank M. Leonard, president and general manager; Jesús Acevedo, vice-president; Ranulfo Bravo, secretary, treasurer and superintendent; Jesús Linares, mine superintendent. Organized Jan. 15, 1907, under laws of Mexico, with capitalization 400,000 pesos, shares 10 pesos par, in 35,000 full paid shares and 5,000 assessable shares; issued, 27,905 shares.

Lands, 5 groups, area 55 hectares, circa 10 miles from Ocotlán, including an antigua said to have been worked by Aztecs before the Spanish conquest. Property shows diorite, carrying a vein of 10' to 12' average width, traceable one mile, with strike of 11° West, carrying ore returning, from shipments, 2% copper, 2% lead, 6% zinc, 5 kgs. silver and 100 grams gold per metric ton. Equipment includes a mill, built by former owner, having 3 stamps and 3 Wilfley tables, now idle because of poor location. Property, in development stage, supported itself from sales of shipping ore, and company has no indebtedness. Property considered promising and management good.

**MINA SAN MIGUEL.****PERU.**

Mine office: Morococha, Junín, Perú. Mine has 2 tunnels, lower circa 500 meters in length, developing mainly enargite, with some tetrahderite and a little tennantite, associated with pyrite. Mine, opened 1904, in 10 years produced, from ore averaging 20% copper and 333 grams silver per ton, 6,476,400 kgs. fine copper and 10,794 kgs. fine silver. Mine was said, 1905, to be producing about 800 tons monthly, of ore averaging circa 22% copper and 10 oz. silver per ton. Production, 1907, estimated at 1,400,000 lbs. fine copper.

**NEGOCIACION MINERA SAN MIGUEL.****MEXICO.**

Mine office: Matehuala, Catorce, San Luis Potosí, Mex. Wm. R. Boggs, Jr., general manager. Has argentiferous copper ore and gold. Equipment includes steam power and a 100-ton leaching plant. Employs circa 300 men.

**SOCIEDAD DE MINERALES DE SAN MIGUEL.****SPAIN.**

Dead. Was succeeded, Oct. 12, 1904, by San Miguel Copper Mines, Ltd. Formerly at Almonaster, Huelva, Spain.

**SAN MIGUEL COPPER CO.**

NEW MEXICO.

Mine office: Tecolote, San Miguel Co., N. M. Frank J. Buck, superintendent, at last accounts. Presumably idle.

**SAN MIGUEL COPPER MINES, LTD.**

SPAIN.

Office: 23 Queen Victoria St., London, E. C., Eng. Mine office: Almonaster, Huelva, Spain. H. Schmidt, chairman; Geo. Endin, secretary; Adolph E. Eberbach, managing director; F. O. Harvey, consulting engineer. Organized Oct. 12, 1904, under laws of Great Britain, with capitalization £150,000, shares £1 par; issued, £140,007. A former debenture issue, of £75,000, at 6%, was fully redeemed from the share premium on a new stock issue, emitted, 1905, at £2 10s. per share. Company is said to have a reserve fund of £60,000. Regular dividend rate is 25% per annum, paid quarterly.

Lands, 1,900 acres, including the San Miguel and adjoining mines of cupriferous pyrites. The property was worked, for some years, by a Portuguese company, the Sociedad de Minerales de San Miguel, until taken over, 1904, by present owners. In 1907 the lower levels of the mine caved in, since which time production has been limited to open-cast ore extraction. The property has circa 450,000 tons of partly leached ore, on surface, in teleras and toreros, and the mine was said to show circa 800,000 long tons of ore averaging 2.5% copper, before underground workings were lost, in whole or part, by caving.

Property includes a 10-kilometer private railway, costing £40,000, from the mine, at Almonaster, to El Cerro, where connection is secured with the Ferrocarril Zafra y Huelva.

Production, 1904, was 588 long tons precipitate and 18,487 long tons cupriferous pyrites, with copper contents of 1,612,809 lbs. fine copper. Production, 1905, was 933 tons precipitate and 3,168 tons cupriferous pyrites, but, 1907, was only 797,440 lbs. fine copper, owing to mine troubles, and, because of these troubles, management was changed, 1907.

**SOCIEDAD MINERA DE SAN MIGUEL DE HUELVA.**

SPAIN.

Dead. Succeeded, Oct. 12, 1904, by San Miguel Copper Mines, Ltd. Formerly at Almonaster, Huelva, Spain.

**COMPANIA MINERA DE SAN MIGUELITO.**

MEXICO.

Mine office: Campas, Moctezuma, Sonora, Mexico. Long idle.

**COMPANIA MINERA SAN PABLO.**

MEXICO.

Mine office: San Pedro de las Colonias, Partas, Chihuahua, Mex. Juan Cayas, superintendent. Has gold, silver and copper ores, employing circa 20 men.

**SOCIETE ANONYME DES MINES DE SAN PEDRO.**

SPAIN.

Office: 39 Rue de Chateaudun, Paris, France. Mine office: Zalamea La Real, Huelva, Spain. Don Carlos Marchal, agent. Capitalization, 450,000 francs. Lands include the Barranco de los Buyes group of 10 old mines, area 167 hectares. Idle.

**SAN PEDRO COPPER CO.**

NEW MEXICO.

Mine office: San Pedro, Santa Fe Co., N. M. Idle since circa 1899.

**SAN PEDRO COPPER CO., S. A.**

MEXICO.

Mine office: La Cananea, Arizpe, Sonora, Mex. Is controlled, through stock ownership, by Cananea Central Copper Co., which is a subsidiary corporation of the Greene Cananea Copper Co. Property consists of the American, Copper Belt, Bryan, Seguro, Square and eastern part of Massey No. 2 and El Oriente claims. Property is described under title of Greene Cananea Copper Co.

**COMPANIA MINERA SAN PEDRO DE NOLASCO.**

CHILE.

Mine office: San Pedro de Nolasco, Victoria, Santiago, Chile. Property is the Carlotta mine, opened A. D. 1795, which is developed by a 700' tunnel. Presumably idle.

**COMPAGNIE DES MINES DE CUIVRE DE SAN PLATON. FRANCE.**

Office: 7 Rue Fillet-Wilh., Paris, France. Mine office: Almonaster, Huelva, Spain. Guillermo Sundheim, manager. Organized Oct. 14, 1906, under laws of France, with capitalization 3,000,000 francs, shares 100 francs par. In 1907 net earnings were 393,568 francs, 69 centimes, and, with allowances for amortization, there was left a net balance of 280,214 francs, 16 centimes. Paid 5% dividends in 1907 and 1908.

Lands, 46 hectares, including the San Platón, Segunda San Platón and Aumento de San Platón mines. Production, 1907, was 26,316 metric tons of cupriferous pyrites.

**SAN POAL MINING & EXPLORATION CO. WASHINGTON.**

Office: care of S. L. Boyer, manager, Spokane, Wash. Mine office: Republica, Ferry Co., Wash. Organized 1907, under laws of Washington. Lands are 9 groups of claims, carrying gold and copper ore.

**SAN RAFAEL COPPER MINING CO. MEXICO.**

Office: Cleveland, Ohio. Mine office: Terezas, Chihuahua, Mex. R. E. Hutchinson, manager; Capt. M. D. Murray, superintendent. Supposedly is controlled by the firm of Corrigan, McKianey & Co. Lands, known as the Columbia group, formerly were held by Federal Copper Co., of El Paso, and Dragoon Mining Co.

**SAN RAFAEL COPPER MINING CO. MEXICO.**

Dead. Formerly at Hermosillo, Sonora, Mex. Described Vol. VI.

**SAN RAFAEL MINING CO. MEXICO.**

Dead. Succeeded by Mercer-San Rafael Mining Co. Formerly at Ameca, Jalisco, Mex.

**COMPAÑIA MINERA SAN RAMÓN DE FREIRINA. CHILE.**

Office: Santiago de Chile. Mine office: San Juan, Freirina, Atacama, Chile. Organized Nov. 22, 1904, under laws of Chile, with capitalization 160,000 pesos, shares 100 pesos par.

**SAN REMO COPPER CO. ARIZONA.**

Dead. Was merely a ghost, when in existence. Formerly haunted Gleeson, Cochise Co., Ariz. Described Vol. V.

**SAN SIMON COPPER CO. ARIZONA.**

Office: Marquette, Mich. Mine office: Paradise, Cochise Co., Ariz. Nathan M. Kaufman, president; Hon. Norman W. Haile, vice-president; S. R. Kaufman, secretary and treasurer; preceding officers, Thos. F. Cole, John A. Duncan, W. G. Rice and Thos. H. Collins, directors; Marshall Estes, superintendent. Organized circa January, 1907, under laws of Arizona, with capitalization \$2,500,000, shares, \$10 par, as a reorganization of Chiricahua Development Co.

Lands, 40 claims, area circa 750 acres, 16 miles from nearest railway, at Rodeo, taken over, April, 1903, by predecessor of present company, and previously operated by Capt. Thos. Burns as a silver mine. Has a 750' crescent tunnel, with a 100' winze 700' from portal, cutting circa 50' of leached ore, apparently the apex of a sulphide ore body. The 400' Mars shaft, sunk on a vein having a 150' gossan, passed through leached ore, and is bottomed in chalcopyrite of 2 to 4% copper tenor. The 400' Phiney shaft has drifts on the fourth level. Equipment includes two 150-h. p. boilers, two 2,000' Lake Shore double-drum hoists, and a 16-drill Sullivan air-compressor. Has several mine buildings. Management is good. Practically idle, except for annual assessment work.

**SANTA ANA-ARIZONA MINING CO. ARIZONA.**

Office: P. O. Box 1715, Bisbee, Ariz. Mine office: Middlemarsh, Cochise Co., Ariz. A. W. McPherson, president; Geo. H. Neale, vice-president; A. R. Gessler, secretary and treasurer; Wm. Goar, general manager; preceding

officers and E. J. Bennett, directors. Organized April, 1905, under laws of Arizona, with capitalization \$2,500,000, shares \$1 par; issued, \$1,400,000. Annual meeting, second Tuesday in February.

Lands, 14 claims, unpatented, area 280 acres, on Dragoon Mountain, in the Black Diamond district, 8 miles from Southern Pacific railway, at Pearce, showing limestone and porphyry, with 5 ore bodies, of which 2, under development, show argentiferous carbonates and sulphides, latter mainly chalcopyrite, estimated by company to carry an average of 10% copper, 15% lead and 6 oz. silver per ton. Development is by tunnels of 70' and 90', and by shafts of 56', 110' and 300'.

Property has steam power, with a 10-h. p. hoist, good for 500' depth, and 2 buildings. Company plans continuous development.

#### SANTA CASILDA COPPER CO.

MEXICO.

Letter returned unclaimed from former mine office, La Lombardia, Uruapan, Michoacán, Mex. Hon. M. G. Horner, president; E. A. Mills, secretary; preceding officers, Rafael E. Velad, Pablo Kosidowsky and Alberto Worn, directors. Organized under laws of Mexico, with capitalization 1,500,000 pesos. Lands are well watered, and include a concession for development of 1,000 hydraulic horse power from a near-by river. Oxidized zone is superficial, sulphide zone carrying mainly chalcopyrite. Mine is developing considerable bodies of 5% concentrating ore, and has small quantities of ore of 15 to 18% copper tenor. Is said to plan a 200-ton concentrator.

#### SANTA CRUZ COPPER CO.

MEXICO.

Mine office: Santa Cruz, Magdalena, Sonora, Mex. Idle and apparently moribund.

#### SANTA CRUZ MINING CO.

ARIZONA.

Office: 51st St. and Allegheny River, Pittsburg, Pa. Mine office: Patagonia, Santa Cruz Co., Ariz. W. W. Hall, president; W. B. Barnes, vice-president; R. D. McDonald, secretary; Wm. M. Schwartz, general manager; J. A. Tustin, superintendent. Organized Oct. 5, 1901, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 6 claims, area 124 acres, 2 miles east of Patagonia, in the Harshaw district, showing several fissure veins, of about 20' average width, said to give a general average assay of 8.5% copper, 20 oz. silver, 5% nickel and \$25 gold per ton, mainly from chalcocite. Development is by 2 shafts, deepest circa 350'.

#### SANTA EMILIA COPPER CO.

MEXICO.

Office: 69 Wall St., New York, N. Y. Mine office: Coapa, Michoacán, Mex. John A. Kennedy, president; A. J. Peyton, vice-president and general manager; Manual L. Ward, secretary and treasurer; J. R. Crum, superintendent. Organized 1899, under laws of Delaware, with capitalization \$1,000,000, and reorganized, March 27, 1905, under laws of Maine, with capitalization \$2,000,000, shares \$1 par. Of the increased capitalization, \$500,000 was given shareholders, as a stock dividend, and balance placed in the treasury, part going to the general manager for lands turned in by him. Is controlled, through ownership of majority of stock, by Mexican Development Co.

Lands, 113 acres, in the Taxambaro district, 24 miles from Mexican National Railway and circa 40 miles southwest of Morelia, including a 30-acre property, adjoining the original tract, taken over from the general manager and former president, paid for in shares from the new treasury stock.

The mine is developed by the 1,200' Napoleon tunnel and by a 635' two-compartment shaft. The property is said to have circa 3,000' of workings, and management is said to plan deepening shaft to 1,000' and crosscutting, circa 800', to intercept the Guadalupe vein. At last accounts the mines had not shown ore in payable quantities, but the management was said to consider the situation encouraging.

Equipment includes a steam plant, and there are various mine buildings, and dwellings for workmen.

The Santa Emilia is controlled by the same people as promoted the Natividad Mining Co., which was a swindle, and the Dona Louisa Copper & Gold Mining Co., which is not regarded favorably, hence the Santa Emilia is viewed with suspicion.

**SANTA EULALIA MINING & MILLING CO.****MEXICO.**

Dead. Formerly at Velardeña, Cuencamé, Durango, Mex. Described Vol. VI.

**COMPAÑIA MINERA LA SANTA FÉ.****MEXICO.**

Office: Monterey, N. L., Mex. Mine office: Galeana, Octavo, Nuevo León, Mex. Organized 1907, under laws of Mexico, with capitalization 36,000 pesos. Property, known as the Santa Fé mines, carries copper ore.

**MINA SANTA FÉ.****MEXICO.**

Mine office: Salto de Agua, Palenque, Chiapas, Mex. This property, formerly held by the Chiapas Mining Co., is developed by a 1,580' tunnel and a 200' main shaft, showing a mineralized zone of circa 100 meters width, between diorite and limestone, apparently formed by contact metamorphism. Values are mainly in argentiferous and auriferous copper ore, but the ore is very complex, carrying cuprite, malachite, bornite, chalcocite, tetrahedrite, chrysocolla, sphalerite, galena, and free gold, associated with pyrite, with a gangue that is mainly wollastonite. The best grade of concentrating ore is mainly bornite, disseminated in a gangue of wollastonite and garnet. Property has water power, a 30-stamp mill, 100-ton concentrator and 75-ton smelter, and in 1903 made 370,488 lbs. fine copper. Idle.

**SANTA FÉ DEVELOPMENT CO.****MEXICO.**

Office: care of D. M. Simpson, secretary, Bisbee, Ariz. Mine office: Ysabel, Moctezuma, Sonora, Mex. Organized Oct. 25, 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$10 par. Holds title to lands through Santa Fé Mining Co., S. A., organized under laws of Mexico. Lands, 120 hectares, are north and east of El Tigre mine, circa 30 miles from Ysabel, the nearest railroad station, and are connected therewith by a good wagon road. Shaft, at depth of 50', gave ore assaying 11% copper and 17 oz. silver per ton, and at depth of 70' gave ore assaying 23.8% copper and 10.8 oz. silver per ton. Employed 50 men at last accounts.

**SANTA FÉ GOLD & COPPER MINING CO.****MEXICO.**

Office: 920 Merchants Loan & Trust Bldg., Chicago, Ills. Mine offices: Alamos, Sonora, Mex., and El Fuerte, Sinaloa, Mex. Is controlled, through stock ownership, by International Copper & Gold Co., which is controlled, through stock ownership, by Sonora Central Mines Co. Lands are 8 groups, in the states of Sonora and Sinaloa. Owing to the company being merely a stepping-stone for the Sonora Central Mines Co., and the further fact that the Sonora Central claims direct ownership to all properties actually owned by the Santa Fé, the various properties, described in detail under this title in Vol. VII, are listed, in the present volume, under title of Sonora Central Mines Co.

**SANTA FÉ GOLD & COPPER MINING CO.****NEW MEXICO.**

Office: 334-11 Broadway, New York, N. Y. Mine office: San Pedro, Santa Fé Co., N. M. Employs 350 men, when operating. Julius H. Susmann, president; E. H. Westlake, secretary and treasurer; preceding officers, C. S. Henry, J. De Smet Maguire, O. B. Van Sant, E. C. Westervelt, Ernest Brown and Chas. N. King, directors; Richard F. McCaffery, general manager; B. H. Case, superintendent. Organized Jan. 20, 1899, under laws of New Jersey, with capitalization \$2,500,000, shares \$10 par, as a reconstruction of the original Santa Fé company, organized 1888, which became bankrupt, 1892,

present company beginning business with \$500,000 cash. State Street Trust Co., Boston, registrar; Old Colony Trust Co., Boston, transfer agent. Shares are listed on the Boston stock exchange. Annual meeting, fourth Tuesday in January.

Company began business with \$500,000 cash, and ended 1907 with a cash balance of \$170,750 and \$3,000 accounts receivable, also having \$22,296 in coke and miscellaneous supplies on hand. Receipts for year were \$230,920 from sale of metals produced, and \$106,613 received from sale of 19,095 shares of treasury stock.

Lands, 3,400 acres of mineral property and 46,000 acres miscellaneous lands, latter including coal areas of promise, all in the old San Pedro land grant, and including the San Pedro mine, which is opened by a single shaft, on a blanket vein of circa 150' average thickness, dipping at an angle of less than 15°, about half the ore body being workable, though low in average grade. The ore is chalcopyrite, with garnet and quartz gangue, ore being highly silicious and requiring heavy iron and lime fluxes. The mine has about 100,000 tons of ore in sight, with 30,000 tons blocked out. Ore smelted, 1901, is said to have given average returns of circa 4.25% copper, 3 oz. silver and \$1.50 gold per ton, but ores smelted, 1907, gave average returns of 2.4% copper, 0.8 oz. silver and 75 cents gold per ton.

Equipment includes a steam plant with a 15-drill air-compressor. Labor is largely Mexican.

The mill treats second class ore, of about 2% copper tenor, making 15% concentrates, and the management has planned the installation of a Wetherill magnetic separator, for treating low-grade carbonate ores.

The smelter, at the mine, blown in Jan. 1, 1901, has two 125-ton blast-furnaces, burning Colorado coke, and producing matte of about 60% average copper tenor, shipped to New Jersey for refining.

Production was suspended, November, 1901, after which nothing was done, except diamond drilling, until the smelter was blown in Feb. 10, 1907, and blown out Oct. 12, 1907, during which time 21,298 tons of ore were smelted, yielding 1,223,457 lbs. fine copper, 17,625 oz. silver and 786 oz. gold, giving an average extraction of 54.4 lbs. fine copper, 0.8275 oz. silver and 0.0369 oz. gold per ton. Product is said to have been secured at an average cost of circa 14 cents per pound finished copper, deducting gold and silver values.

The property is low in grade, though possessing an immense tonnage of ore, but, to be operated profitably, a considerable portion of the ore should be concentrated and railroad connections are absolutely necessary, property being 21 miles from the Santa Fé railway. Property considered promising and management good.

#### SANTA FÉ MINING CO., S. A.

MEXICO.

Mine office: Ysabel, Moctezuma, Sonora, Mex. Is the Mexican incorporation of the Santa Fé Development Co.

#### SANTA FÉ MINING CO.

NEVADA.

Dead. Was controlled by Pittsburg capital and was operating in 1907. Formerly at Luning, Esmeralda Co., Nev.

#### SANTA FÉ MINING & REDUCTION CO.

NEW MEXICO.

Dead. Formerly at Santa Fé, Santa Fé Co., N. M.

#### COMPAÑIA SANTA INES y MOROCOCHA.

PERÚ.

Office: 193 Calle de Aparicio, Lima, Perú. Mine office: Morococha, Junín, Perú. Employs circa 125 men. Roberto Pfucker, president; Leopoldo Pfucker, vice-president; Porfirio Silva, secretary and treasurer; Vicente Pazos y Sacio, general manager; León Torres, mine superintendent. Organized under laws of Perú, with capitalization 1,200,000 soles.

Lands, 120 claims, area 240 hectares, also the Hacienda Morococha, area 6,000 hectares, in the Tuctu district. Mineral lands are in the Morococha Basin, which has 4 large lakes, connected by streams having waterfalls available for power purposes. Mining property includes the San Francisco and San Miguel mines, carrying fissure veins and contact deposits between diorite, limestone and quartz-porphry, these averaging one meter in width, and carrying sulpho-arsenide copper ores, ranging in tenor up to 25% copper and 16 oz. silver per ton.

The mines, opened 1898, are developed by the 300-meter Ausiliar tunnel, the 600-meter Media Falda tunnel and the 800-meter Laguna tunnel, with about 3,000 meters of workings, estimated to show circa 20,000 metric tons of ore blocked out for stoping. Ore, as produced, is divided into 2 grades, averaging 44.18% and 13.86% copper, respectively, and, for first 6 years, ore produced averaged 25.78% copper and 330 grams silver per ton, after hand-selection. The mine is served by the Ferrocarril Central del Perú.

Equipment includes a hydro-electric installation, with a 40-kw. Siemens & Halske generator for light and power, and 3 electric drills. Fuel is domestic coal, costing about 9 pesos per ton, and cost of mining is given by company as averaging circa \$2.50 per ton, ore being dressed to an average copper tenor of circa 25%, and sold to the Casapalca smelter for reduction.

Production, 1905, was circa 3,600 metric tons of ore, carrying about 2,000,000 pounds fine copper. At last accounts property was under option to Messrs. Haggan and McKim, apparently for the Cerro de Pasco company.

#### SANTA INEZ MINING CO., LTD.

PERÚ.

Office: 5 Fenchurch St., London, E. C., Eng. Mine office: Morococha, Junín, Perú. Capt. W. B. McTaggart, J. P., chairman; A. Turner, secretary. Organized June 30, 1906, under laws of Great Britain, with capitalization £150,000, shares £1 par; issued, at last accounts, £8. Apparently abortive.

#### COMPAÑIA MINERA SANTA JOVITA DE COLLAHUASI.

CHILE.

Office: Valparaíso, Chile. Mine office: Collahuasi, Tarapacá, Chile. Organized March 31, 1906, under laws of Chile, with capitalization £110,000, shares £1 par.

#### MINA SANTA MARIA.

HONDURAS.

Letter returned unclaimed from former mine office, Comayagua, Honduras. According to the story, which is a monument to the colossal genius of the liar who invented it, the mine, which has but slight development, is a mountain of solid ore, ten miles in circumference, assaying 10 to 75% copper. Idle.

#### COMPAÑIA MINERA SANTA MARIA DE LA PAZ.

MEXICO.

Office: 10 Cinco de Mayo, San Luis Potosí, Mex. Mine office: Matehuala, San Luis Potosí, Mex. Pedro Barrenechea, president; Rafael G. Barrenechea, secretary; W. B. A. Dingwall, manager; José Torres, superintendent. Mines, extensively developed, carry auriferous and argentiferous lead and copper ores. Has steam, electric and gas power, Chilean mills, Blake crushers, smelter with two 40-ton furnaces, and a 300-ton concentrator. Employs circa 1,500 men, and is a considerable producer of lead and silver, with smaller by-products of gold and copper.

#### SANTA MARIA MEXICO MINING ASSOCIATION.

MEXICO.

Office: Merrill Bldg., Milwaukee, Wis. Mine office: Parral, Chihuahua, Mex. Wm. G. Gruber, president and general manager; Arthur H. Gruber, secretary and treasurer; preceding officers and Rt. Rev. Mgr. Alois Plut, directors; Dr. Chas. Yetmar, vice-president; A. S. Mitchell, consulting engineer; Henry Bitsch, superintendent. Organized under laws of Wisconsin, with capitalization \$250,000, shares \$1 par. Lands, 50 claims, in 3 groups, known as

La Lolita, La Viola and Santa Clara, located in the San Blas mountains of the Sierra Madre, midway between and 25 miles from the Mexican Central and Sierra Madre Pacifico railways. Principal development is on La Lolita group, which has shafts of 75' and 150', showing rich oxidized ores, assaying up to 70% copper, shipments from which have averaged 15% copper.

**SOCIEDAD MINERA SANTA RITA DE ARQUEROS.** CHILE.

Office: Santiago de Chile. Mine office: Arqueros, Coquimbo, Chile. Organized Dec. 12, 1905, under laws of Chile, with capitalization 400,000 pesos, shares 50 pesos par.

**SANTA RITA COPPER MINING & SMELTING CO.** ARIZONA.

Letter returned unclaimed from former office, 1509 Chemical Bldg., St. Louis, Mo. Mine office: Arivaca, Pima Co., Ariz. Geo. P. Meyers, R. J. Adams and C. T. Sharn, vice-presidents; N. C. Wilson, secretary; J. M. Wyatt, treasurer; C. F. Elliott, general manager. Organized June, 1901, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par.

Lands, 40 claims, area 630 acres, also 4 timber claims and a 20-acre smelterite, in the Tyndall district, Santa Rita Mountains, 13 miles from Arivaca, said to show 10 veins, of which 4, under development, are claimed to average 8' to 30' in width, and are claimed to give average assays of circa 18% copper, 6 to 10% lead, 1 to 3% zinc, 40 to 68 oz. silver and \$2 to \$8 gold per ton, from sulphide ores, these figures being utterly preposterous. Mine has 5 pits and shafts, of 20' to 110' depth, and 5 tunnels, of 40' to 260' length, with circa 1,000' of workings. Company changed officers repeatedly, was a mere stock-jobbing scheme under former managements, and is regarded with suspicion.

**SANTA RITA MINING CO.** NEW MEXICO.

Office: 85 Ames Bldg., Boston, Mass. Mine office: Santa Rita, Grant Co., N. M. Albert C. Burrage, president; B. B. Thayer, consulting engineer; John Deegan, superintendent. Capitalization \$5,000,000, shares \$25 par. Is said to contemplate reduction of capitalization to \$2,000,000. Paid, 1904, a \$100,000 dividend.

Lands, 79 claims, 46 patented, area circa 640 acres. Is the oldest copper mine in New Mexico, and one of the oldest in the United States, having been opened A. D. 1800. Mine was abandoned, circa 1820, owing to the Mexican revolution, and was reopened, circa 1860. Development is by numerous shallow shafts. No. 8 shaft, with two compartments, is 214' deep, carrying stopes on 8 drifts. No. 9, a 2-compartment shaft, started 1906, is to be sunk to 300'. A new shaft, of 1,000' projected depth, was started 1907. Equipment includes a 100-ton concentrator, having rolls and Wilfley tables.

Company is exceedingly secretive, for reasons best known to the management, and is supposed to be closely allied with the Amalgamated Copper Co. Production, 1907, is estimated at 2,500,000 lbs. fine copper, largely secured by leasers.

**COMPAÑIA MINERA SANTA ROSA.** CHILE.

Office: Santiago de Chile. Mine office: Arqueros, Coquimbo, Chile. Organized May 29, 1905, under laws of Chile, with capitalization 200,000 pesos, shares 1,000 pesos par.

**SANTA ROSA COPPER CO.** ARIZONA.

Dead. Lands sold, circa 1905, to Detroit Copper Mining Co., of Arizona. Formerly at Metcalf, Graham Co., Ariz. Described Vol. V.

**SANTA ROSA DEVELOPMENT CO.** MEXICO.

Dead. Lands sold, 1907, to Cabullona Development Co. Formerly at Fronteras, Arizpe, Sonora, Mex. Described Vol. VI.

**SANTA ROSA DE MAZAPIL MINING CO.** MEXICO.

Letter returned unclaimed from former office, 20 Broad St., New York,

N. Y. Mine office: Mazapil, Zacatecas, Mex. Has gold, silver, lead and copper ores, opened by shafts and a 1,500' tunnel. Presumably idle.

**SANTA ROSALIA MINING CO.**

MEXICO.

Mine office: Tejupilco, Temascaltepec, Mexico, Mex. Property carries auriferous and argentiferous copper and lead ores, and has steam power, employing, 1906, circa 40 men.

**SANTIAGO CONSOLIDATED MINING, MILLING**

COLORADO.

& TUNNEL CO.

Mine office: Georgetown, Clear Creek Co., Colo. S. K. Davis, superintendent, at last accounts. Has gold, silver, lead and copper ores, and a 75-ton concentrator.

**SANTIAGO COPPER MINING CO.**

CUBA.

Dead. Formerly at El Cobre, Santiago de Cuba.

**SANTIAGO MINING CO.**

MEXICO.

Office: 517 Francis St., St. Joseph, Mo. Mine office: Parral, Hidalgo, Chihuahua, Mex. Geo. J. Greene, president; Geo. Roche, vice-president; T. G. Travis, secretary and treasurer; Nat P. Wilson, general manager; preceding officers and Henry Roach, directors. Organized March 7, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Annual meeting, third Thursday in February.

Lands, 6 claims, area 79 acres; also 1 claim, area 20 acres, in Otero county, New Mexico. Chihuahua lands show limestone and porphyry, carrying 6 ore bodies, said to be fissure veins of 12' average width, giving average assays of 3.5% copper, 15% lead, 22 to 25 oz. silver and \$6 gold per ton, from oxide and sulphide ores. Has 7 shafts, of 55' to 150' depth, with total of 755' of workings, estimated to show 150,000 tons of ore blocked out for stoping, which is excessive. Has a 250-h. p. electric plant, with 3 hoists, good for 1,000' each, 7-drill air-compressor, 60x85' machine-shop of frame and adobe, and other mine buildings. Plans building a concentrator. Employs circa 25 men.

**SANTO DOMINGO GOLD & COPPER CO.**

SANTO DOMINGO.

Mine office: San Cristobal, Santo Domingo. Sly Dorsey, vice-president; Con O'Connor, secretary; E. F. Buchanan, treasurer. Organized Sept. 17, 1906, under laws of Maine, with capitalization \$64,000,000, shares \$100 par.

Lands claimed are alleged mining rights to 400 square miles of the Jaina Valley, in the Province of San Cristobal, estimated, with due modesty, by the company, to carry seven billion dollars' worth of gold, to be had for merely digging it out. Notwithstanding the alleged possession of \$7,000,000,000 worth of gold, the property was bought for \$50,000 and the company spent only \$40,000 for development and equipment, never employing more than 10 men.

A. O. Brown & Co., stock brokers of New York, voluntarily redeemed a considerable portion of the stock of this company placed by them, with the explanation that they had learned that the property was not as represented, and were considered entitled to commendation for an honest act, but this firm failed, under discreditable circumstances, a few months later, and apparently Brown & Co. refunded but part of the money, as shareholders instituted a suit, circa October, 1908, for restitution of \$543,000, alleged to have been paid for stock. Peter Whitney, former president of the company, apparently was not responsible for the company's misrepresentations, and is said to be himself a sufferer, but apparently Whitney was mixed up very closely with some of the peculiar transactions of A. O. Brown & Co. The company is a swindle, and, to all practical intents and purposes, is dead.

**SANTO DOMINGO SYNDICATE.**

SANTO DOMINGO & HAITI.

Office: care of E. A. Blanton, Jr., general manager, The Bourse, Philadelphia, Pa. Mine office: San Cristobal, Santo Domingo. Capt. J. R. De Lamar,

**E. P. Earle, G. P. Lindermann, L. H. Taylor, Jr., W. T. White, Geo. R. Radford, T. C. Hall and E. T. Lavino, directors.** Organized under laws of New Jersey, with capitalization \$100,000.

Lands, 100 square miles, in the republics of Haiti and Santo Domingo. The San Francisco Hills mine, near San Cristobal, is said by Mr. Blanton to show a body of chalcopyrite of 500' width, carrying 5 to 20% copper, and \$1 to \$12.50 gold per ton. A 42" gauge railway was under construction early 1906. Presumably idle.

**SOCIÉTÉ ANONYME DES MINES ET USINES DE SANTOMERA. SPAIN.**

Office: 27 Rue Mogador, Paris, France. Mine office: Santomera, Murcia, Spain. A. Foques-Duparc, J. Foques-Duparc, J. L. Baillé and R. Canat de Chizy, directors. Organized May 2, 1905, under laws of France, with capitalization 300,000 francs, shares 500 francs par. Was endeavoring, July, 1908, to reorganize, with capitalization 1,100,000 francs, shares 100 francs par.

**SANTO NIÑO MINING CO.**

**MEXICO.**

Dead. Formerly at Symón, San Juan de Guadalupe, Durango, Mex.

**SAN XAVIER COPPER CO.**

**MEXICO.**

Office: care of Wm. Foster, secretary, Tucson, Ariz. Mine office: San Javier, Hermosillo, Sonora, Mex. C. C. Rountree, president; George Grunig, vice-president; Max Muller, treasurer. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Mexican incorporation is the Compañía Minera de Cerro Verde, S. A. Lands, 1,440 pertenencias, 80 miles east of La Colorada, also 300 pertenencias lying 24 miles to the southward, and circa 4 miles north of the Yaqui river. Presumably idle.

**SAPHO MINING CO.**

**NEVADA.**

Mine office: Ely, White Pine Co., Nev. John Webber, superintendent. Capitalization \$1,000,000, shares \$1 par. Development is by a tunnel, having a back of 250' at last accounts, said to show auriferous oxidized ores assaying 6 to 22% copper, with a paystreak carrying about \$30 gold per ton. Has steam power.

**SARATOGA DEVELOPMENT CO.**

**COLORADO.**

Mine office: Central City, Gilpin Co., Colo. John Owen, manager. Has gold, silver and copper ores, with steam power. Was developing, with circa 15 men, at last accounts.

**SARATOGA PYRITIC SMELTING CO.**

**COLORADO.**

Dead. Formerly at Ironton, Ouray Co., Colo. Described Vol. VI.

**SARATOGA SMELTING & REFINING CO.**

**COLORADO.**

Dead. Succeeded, 1903, by Continental Smelting & Refining Co. Formerly at Ironton, Ouray Co., Colo.

**SASAGATINI MINE.**

**JAPAN.**

Mine office: Hatazako-mura, Kanoashi-gori, Iwami, Japan. Property carries slightly argentiferous chalcopyrite, associated with sphalerite, galena and arsenopyrite, with quartz and limestone gangue, in numerous contact veins ranging up to 50' in width. Production has been as follows: 274,412 lbs. fine copper and 62,961 momme silver in 1900; 324,183 lbs. copper in 1903; 308,358 lbs. copper and 109,215 momme silver in 1907.

**SASCO SMELTER.**

**ARIZONA.**

Owned by Southern Arizona Smelting Co.

**SATER COPPER CO.**

**NEW MEXICO.**

Dead. Lands sold under foreclosure Dec. 12, 1906. Practically succeeded by Fort Pitt Copper Co. Formerly at Kenton, Oklahoma, with lands in Union Co., N. M. Fully described Vol. VI.

**SAUK RIVER MINING CO.**

**WASHINGTON.**

Letter returned unclaimed from former office, 327 Pacific Blk., Seattle,

Digitized by Google

**Wash.** Mine office: Darrington, Snohomish Co., Wash. Harold G. Price, president and treasurer; Wm. Van Waters, secretary. Organized 1898, under laws of Washington, with capitalization \$200,000, shares 50 cents par. Lands, 9 claims, area 180 acres, in three groups, carrying 3 veins of auriferous and argentiferous copper ore. Vein at Blue Bird group is claimed to be 98' wide, between porphyry and slate, carrying 3 pay streaks, of 2', 4' and 6', balance of vein being a low-grade self-fluxing concentrating ore. Idle several years and apparently moribund.

**SAULT GRAY COPPER CO.****ONTARIO.**

Dead. Absorbed, circa 1903, by Copper Queen Mining Co., Ltd. Formerly at Bruce Mines, Algoma, Ont.

**SAULT PROSPECTING & DEVELOPMENT CO.****ONTARIO.**

Dead. Succeeded, circa 1903, by Copper Queen Mining Co., Ltd. Formerly at Bruce Mines, Algoma, Ont.

**SAUX HEAD COPPER MINING CO., LTD.****MICHIGAN.**

Office: 36 Home Bank Bldg., Detroit, Mich. Mine office: Marquette, Marquette Co., Mich. Employs 8 men. Chas. A. Stringer, president and general manager; Frank M. Moore, vice-president; J. G. Krieg, secretary; Chas. M. Miller, treasurer; preceding officers and Geo. R. Purdon, directors. Organized Aug. 13, 1902, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par. Lands, 360 acres, freehold, in the Sauk's Head district, northwest of Marquette, 2 miles from Lake Superior & Ishpeming railway, showing 2 ore bodies, said by company to occur as impregnations in granite and diorite, but stated by other authorities to be gash veins in granite, these ranging 4' to 8' in average width, giving assays of 1 to 4% copper and \$2 to \$200 gold per ton. Has shafts of 50' and 170', and tunnels of 30', 40' and 70'. Has steam power with 2 donkey hoists, a 5-drill Ingersoll air-compressor and 4 power drills. Has 7 buildings, including a 15x20' machine-shop, store, office and dwellings. Idle.

**SAVAGE GOLD & COPPER CO.****ARIZONA.**

Office: 625 Noble St., Chicago, Ills. Operating office: Douglas, Ariz. Mine office: Paradise, Cochise Co., Ariz. F. M. Wajtalewicz, president; J. A. Lewandowski, vice-president; P. Dryzmalski, secretary; A. P. Behnke, treasurer; preceding officers, J. Kosinski, A. Spetz, J. Z. Wierzchowski, A. Czajor, J. C. Hess, Jr., and Albert Hindera, directors; Jas. Reay, general manager. Organized Jan. 6, 1904, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Annual meeting, first Tuesday in November.

Lands, 53 claims, area circa 1,000 acres, in the California district, lying in the eastern foothills of the Chiricahua Mountains, next the San Simon valley, 10 miles from Rodeo, the nearest railroad station. The property shows 5 irregular ore bodies, apparently lenses, of which 4, under development, are of 2' to 36' width, giving assays of 5% copper, 1% lead and from nothing to 30 oz. silver per ton, lead values being from occasional galena.

Development is by 5 shafts, mainly shallow, the 710' Snowball incline shaft showing an ore body ranging up to 23' in width. There also is a 350' tunnel, with circa 3,000' of workings.

Equipment includes a 60-h. p. Otto gasoline engine and a 75-kw. electric generator, 2 motors, an electric hoist and electric drills.

A much-talked-of 50-ton smelter failed to materialize, though it was said, at one time, that the material therefor was on the ground. Company was said, January, 1908, to plan beginning shipments to the Copper Queen smelter.

**SAVANIC MINE.****ARIZONA.**

Office: care of Col. H. L. Pickett, St. George, Utah. Is a partly developed mine, in the northern part of Mohave county, Arizona, nearest town being

St. George. Has shipped 14 carloads of ore to Salt Lake smelters, averaging 39% copper, this being hauled 140 miles by wagon and 300 miles by rail. Property is promising, but almost inaccessible, at present. Idle several years.  
**SAVANNA COPPER CO.**

**NEW MEXICO.**

Office: 616 Lonsdale Bldg., Duluth, Minn. Mine office: Tyrone, Grant Co., N. M. Works office: Silver City, Grant Co., N. M. H. B. Hovland, general manager; E. A. Wayne, superintendent. Organized circa September, 1908, under laws of Arizona, with capitalization \$2,000,000, shares \$10 par, as a merger of the Copper Gulf and Comanche companies, properties of which are separately described, under their respective titles, in this work. Property considered valuable and management good.

**SAWATARI MINE.****JAPAN.**

Owned by Mitsu Bishi Goshi-Kwaisha.

**SCANLAND MINE.****ARIZONA.**

Office and mine: Paradise, Cochise Co., Ariz. F. S. Douglas, general manager; L. H. Scanland, mine superintendent and owner. Lands, 12 claims, unpatented, area 240 acres, also a 10-acre millsite, in the California district, showing limestone, quartzite and porphyry, with 4 ore bodies, of 4' to 30' width, of which one, under development, traceable circa 4,500', carries some oxides and carbonates, but mainly chalcopyrite, galena and sphalerite, estimated to average 5% copper, 20% lead and 23% zinc, with a trace of gold. Development is by a 175' shaft and 450' tunnel, with circa 700' of workings. Idle, except for annual assessment work.

**SCANTIC GOLD MINING & MILLING CO.****COLORADO & MEXICO.**

Office: 206 Continental Bldg., St. Louis, Mo. Mine offices: White Cross, Hinsdale Co., Colo., and Charcas, Moctezuma, San Luis Potosí, Mex. Henry Leschen, president; A. D. Grant, secretary. W. F. Smith, superintendent of Colorado property, which has steam power, and is developing ores of gold, silver, copper and lead. Joseph T. Murphy, manager of Mexican property, which includes the San Sebastian and extensions, carrying silver, lead and copper, equipped with a 25-ton concentrator.

**KUPFERKIESBERGBAU SCHATTBERG.****AUSTRIA.**

Mine office: Schattberg, Tyrol, Austria. Was a very small copper producer at last accounts.

**GEWERKSCHAFT SCHLESISCHE NICKELWERKE.****GERMANY.**

Dead. Formerly at Gläsendorf, Schlesien, Germany. Described Vol. VI.

**SCHULL COPPER MINING CO., LTD.****IRELAND.**

Office: 16 Great Winchester St., London, E. C., Eng. Mine office: Schull, County Cork, Ire. Thos. V. Anthony, W. F. Ladenburg, and Sir Thos. Selby Tancred, Bart., directors; W. S. Pearless, mine manager; F. C. Vernon, secretary. Organized Apr. 6, 1906, under laws of Great Britain, with capitalization £9,000, in 5,000 ordinary shares of £1 par, and 40,000 deferred shares of 2s. par. Property is a 60-year mining license, dated Dec. 25, 1902, covering lands on Coney Island and Long Island, said to have been bought for a consideration of £3,500. Is not regarded favorably.

**SCHUYLER COPPER CO.****PENNSYLVANIA.**

Mine office: Phoenixville, Chester Co., Pa. Property is the Jones mine, in Caernarvon township, Berks county, Pennsylvania. Company operated the mine, 1869-1878, and built a small smelter. Idle since 1878.

**SCHULYKILL COPPER CO.****ARIZONA.**

Dead. Formerly at Chloride, Mohave Co., Ariz.

**SCOTIA MINING & MILLING CO.****WASHINGTON.**

Dead. Formerly at Bossburg, Stevens Co., Wash.

**SCOTTISH-AUSTRALIAN COPPER CORPORATION, LTD.**

Office: Guernsey, Great Britain. Organized Jan. 14, 1904, under laws of Guernsey, with capitalization £200,000, shares £1 par. Location of lands, if any, unknown. Not regarded favorably.

**SCOTTISH-CAUCASIAN COPPER SYNDICATE, LTD.**

Dead. Formerly had an office at 55 West Regent St., Glasgow, Scotland.

**SCOTTISH CHIEF MINE.**

UTAH.

Mine office: Park City, Summit Co., Utah. Wm. J. Lawrence, manager. Mine, opened by a 325' shaft, shows mainly silver-lead ores, assaying up to 60% lead and 21 oz. silver per ton, but has made several small shipments of ore averaging circa 14% copper and 20- to 50 oz. silver per ton, and has ores assaying 7.5% copper, 6% lead, 32 oz. silver and \$1.80 gold per ton.

**SCOTTISH COPPER MINES SYNDICATE BRITISH COLUMBIA.****OF BRITISH COLUMBIA, LTD.**

Dead. Formerly at Kamloops, Yale district, B. C.

**SEABOARD COPPER CO.**

VIRGINIA.

Office: 77 South Market St., Boston, Mass. Mine office: Virgilina, Halifax Co., Va. M. A. Packard, president; H. J. Sampson, vice-president; Edward L. Pond, secretary; C. C. Merritt, treasurer; L. W. Tucker, general manager. Organized July, 1902, under laws of New Jersey, with capitalization \$300,000, shares \$1 par. Lands, 135 acres, including the Dorothy and Bailey mines, in the Virgilina district, 3 miles from the Southern Railroad, showing slate, traversed by a fissure vein of 8' estimated width, carrying cuprite, malachite and azurite in the upper part, with bornite below, giving estimated values of 3 to 4% copper, with combined gold and silver values of \$1 to \$1.20 per ton. Development is by shafts of 30', 265' and 115', and by 2 tunnels, of 165' each, with a total of 840' of underground workings, estimated to show 40,000 tons of ore, with 10,000 tons blocked out for stoping, and with 3,000 tons on the dumps, ready for milling. Equipment includes a 275-h. p. steam plant, with a 25-h. p. Lidgerwood hoist, good for 500' depth, and a 5-drill Ingersoll-Sergeant air-compressor. Buildings include an office, bunk-house and engine-house. Idle several years.

**SEAGER-COREYLL GOLD & SILVER MINING CO., LTD.**

IDAHO.

Office: Phillipsburg, N. J. Mine office: Custer, Custer Co., Idaho. John Eilenberg, president; Reginald Coryell, secretary and general manager. Organized January, 1900, under laws of New Jersey, with capitalization \$100,000, shares \$1 par. Lands, 9 claims, area 170 acres, in the Yankee Fork district, showing several veins, with about 1,500' of underground openings, one claim showing melaconite, azurite, malachite and chalcopyrite, assaying 3% copper, with fair gold and silver values. Idle several years.

**SEA ISLAND COPPER CO.**

ALASKA.

Mine office: Kasaan, Alaska. F. A. Barrette, superintendent. Lands, 6 claims, about 1 mile from the Rush-Brown property, on Kasaan Bay, showing chalcopyrite assaying up to 20% copper.

**SEARCHLIGHT COPPER-GOLD MINING CO.**

NEVADA.

Office: 402 Stimson Bldg., Los Angeles, Cal. Mine office: Searchlight, Lincoln Co., Nev. Samuel T. Graham, president; R. P. Pierce, vice-president; John G. Davis, treasurer; V. A. Brewer, secretary; preceding officers, Robt. D. Reed, J. W. Cornick and C. Rauber, directors; John Howe, superintendent. Organized Nov. 27, 1901, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par; issued, \$880,000. Annual meeting, first Monday in November.

Lands, 7 claims, surveyed for patent, area 140 acres, showing 6 ore bodies, in granite and porphyry, of which 3, under development, of 6" to 5' width, carry oxidized and sulphide ores estimated to average 12.8% copper and up to

\$140 gold per ton. Development is by the 100' Oom Paul shaft, and by tunnels of 20', 65' and 100'. Hand power is employed. Old management did badly by the property, but new directorate seems an improvement.

**SEARCHLIGHT GOLD & COPPER CO.**

**ARIZONA.**

Dead. Property was 11 claims and water rights, in the Wrightson district, circa 2 miles west of Patagonia, on the Sonora Railroad. Lands showed a mineralized dyke of 250' claimed width, with a capping of hematite and manganese, opened by three 40' shafts, said to give ore assaying \$4 to \$70 per ton in combined gold and silver values. M. S. Moore was superintendent. Formerly at Patagonia, Santa Cruz Co., Ariz.

**SEATCN MINING & MILLING CO.**

**COLORADO.**

Dead. Formerly at Idaho Springs, Clear Creek Co., Colo.

**SEATTLE-ALASKA COPPER CO.**

**ALASKA.**

Office: Seattle, Wash. Mine office: Latouche, Latouche Island, Alaska. Jas Bjorn, secretary, treasurer and general manager. Capitalization \$1,000,000, shares \$1 par. Lands, 10 claims, with a water power available, said to give a fair surface showing of argentiferous and auriferous chalcopyrite, having a 65' shaft in ore. Has steam power and employs circa 15 men.

**SEATTLE-BOSTON COPPER CO.**

**WASHINGTON.**

Office: 419 Alaska Bldg., Seattle, Wash. Mine office: Skyhomish, King Co., Wash. Chas. E. Crane, president and general manager; Dr. F. A. Churchill, vice-president; Geo. H. Law, secretary; Martin B. Crane, treasurer; preceding officers and A. M. Brooks, directors; A. J. Walters, superintendent; Jas. Cosgrove, mine superintendent. Organized Sept. 19, 1905, under laws of Washington, with capitalization \$2,000,000, shares \$1 par, divided into \$600,000 preferred 8% stock and \$1,400,000 common stock, latter issued in payment for the property, and held in escrow at last accounts, 1906.

Company apparently controls the Dutch Miller Mining & Smelting Co., through lease, and creditors of latter asked, 1907, for a receiver, alleging mismanagement on the part of officers of the Seattle-Boston Copper Co.

Lands, 20 claims, area 400 acres, also a 120-acre millsite, in the Burns district, 11 miles south of the Great Northern Railway. A water-right, owned by the company, is claimed to be capable of developing 40,000 h. p. Property shows syenite, carrying 12 fissure veins, of which 3, under development, are reported as of 18' average width, opened by tunnels of 70', 35' and 60', estimated to show 20,000 tons of ore, with 5,000 tons blocked out for stoping, which figures are considered excessive, in view of the extremely limited development secured, with 1,500 tons of ore on the dump, formerly estimated to carry average values of 16% copper, 3% zinc, 6 oz. silver and \$3 gold per ton, which figures are considered excessive, but ore was said, February, 1907, to average only about 7% copper and 4 to 11 oz. silver per ton, with small gold values, which figures probably are amply high.

Improvements include 5 small mine buildings, and company was said, 1906, to have ordered a 500-ton Bleichert aerial tramway, a 250-kw. Westinghouse electric generator, a 100-h. p. hoist and a 10-drill air-compressor, but none of this machinery seems to have materialized. Company also reported that it was building a 6½-mile private line, to be known as the Seattle-Boston Railroad, to have a 200-h. p. Westinghouse electric locomotive, but apparently was unable to sell sufficient stock to build the road. The property may be valuable, as claimed, but the company cannot be regarded favorably, in the light of excessive claims made at the time when stock was being sold. Presumably idle.

**SEATTLE GOLD & COPPER MINING CO.**

Dead. Formerly had an office at Seattle, Wash.

Digitized by Google

**SECRET COPPER MINING CO., N. L.****AUSTRALIA.**

Mine office: Illewong, N. S. W., Australia. Organized December, 1907, under laws of New South Wales, with capitalization £1,200, shares £10 par.

**SEDALIA COPPER CO.****COLORADO.**

Mine office: Salida, Chaffee Co., Colo. Capitalization is 90,000 shares, of which 75,000 shares are under option, and in escrow, at \$2 per share, until May, 1909. Lands are leased for 10 years to Salida Gold & Copper Mining Co. Option presumably is to Shawmut Consolidated Copper Co.

**SOCIÉTÉ ANONYME DES MINES DE CUIVRE DU SEIBAL.** **BRAZIL.**

Office: 40 Rue de Chabrol, Paris, France. Mine office: Camaquam, Cacapava, Rio Grande do Sul, Brazil. Al. Fluer, president. Organized May 5, 1903, under laws of France, with capitalization 415,000 francs, shares 100 francs par. Property, near the Camaquam mine, carries argentiferous and auriferous copper ore, and associated minerals.

**SELATI COPPER SYNDICATE, LTD.****TRANSVAAL.**

Letter returned unclaimed from former office, Johannesburg, Transvaal. Organized August, 1907, under laws of Transvaal, with capitalization £3,000. Location of lands, if any, unknown. Apparently moribund.

**SELBY SMELTING & LEAD CO.****CALIFORNIA.**

Office: Merchants Exchange Bldg., San Francisco, Cal. Works office: Selby, Contra Costa Co., Cal. A. J. Balston, president; Eugene E. Braden, vice-president and general manager; H. B. Underhill, Jr., secretary; Alfred von ver Ropp, superintendent. Organized 1875, under laws of California, and is controlled, through stock ownership, secured 1905, by American Smelters Securities Co., a subsidiary corporation of the American Smelting & Refining Co. The works represent an investment of about \$4,000,000.

Property consists of an extensive smelting and refining plant, equipped with steam and electric power, at Vallejo Junction, near Carquinez Strait, the site of the smelter being somewhat circumscribed. Ore is received by rail and water, the works drawing supplies from all of the Pacific states, with a greater portion of the ore supply coming from Nevada and California.

The works include a 400-ton smelter, with both lead and copper stacks, a 200-ton lead refinery, a refinery for parting gold and silver, and a plant for the manufacture of bluestone. Fuel is coal, coke and petroleum.

An injunction was secured, 1907, by the authorities of Solano county, because of damage to agricultural interests from smelter smoke, which the company endeavored to do away with, by installing a fume precipitation plant, on the Cottrell system, said to have been used successfully elsewhere, which was planned to eliminate dust and carbon and sulphur compounds, including sulphurous acid and sulphur anhydride, this process including the installation of a sulphuric acid plant. Notwithstanding the attempts of the company to do away with fumes, the efforts were not entirely successful, and the works were closed, August, 1908, by a permanent injunction, and apparently are out of business permanently, to the great detriment of the mining interests of California and Nevada.

**SELKIRK MOTHER-LODE COPPER MINES, LTD.** **BRITISH COLUMBIA.**

Dead. Formerly had an office at 5 Laurence Pountney Hill, London, E. C., Eng.

**SEMINOLE COPPER MINING CO.****GEORGIA.**

Dead. Property sold, 1904, by the sheriff, to Carl Heinrich, for \$33,000. Practically succeeded by Lincoln Gold & Copper Mining Co. Formerly at Metasville, Wilkes Co., Ga. Fully described Vol. III.

**SEMINOLE MINE.****GEORGIA.**

Owned by Lincoln Gold & Copper Mining Co.

**SEMINOLE MINING CO.**

UTAH.

Office: 208-69 East Third South St., Salt Lake City, Utah. Mine office: Callao, Juab Co., Utah. Clyde H. Wilson, president; W. F. Wilson, vice-president; Frank L. Wilson, secretary and treasurer; preceding officers, W. R. Wilson and N. R. Wilson, directors. Organized, circa 1907, under laws of Utah, with capitalization \$125,000, shares 25 cents par. Lands, in the Clifton district, near the Lucy L. Mining & Milling Co., are said to show ores carrying copper, silver, gold, lead, tin and nickel.

**SENATOR MINES CO.**

COLORADO.

Office: 1209 Association Bldg., Chicago, Ills. Mine office: Black Hawk, Gilpin Co., Colo. Chas. Kingsley Ray, president; John G. McConnell, vice-president; Dr. M. H. Brown, secretary; W. J. Blake, superintendent; preceding officers and H. A. Hicks, directors. Organized 1906, under laws of Colorado, with capitalization \$1,500,000, shares \$1 par. Lands, 2 claims, having a 550' shaft with about 2,000' of workings, showing veins of 5' to 7' width, with a 2' paystreak, carrying mainly ore of concentrating grade, with values in silver, copper and gold, mainly the latter. Has a hoist good for 1,500', and plans an electric power installation.

**SENECA MINING CO.**

MICHIGAN.

Office: 301-199 Washington St., Boston, Mass. Operating office: Houghton, Mich. Mine office: Allouez, Keweenaw Co., Mich. Albert S. Bigelow, president; Wm. J. Ladd, secretary and treasurer; Hon. Norman W. Haire, general manager; S. Russell Smith, superintendent. Organized circa 1866, under laws of Michigan, with capitalization \$500,000, shares \$25 par.

Lands originally were 3,240 acres, reduced, 1880, by setting off the Ahmeek, to 1,880 acres. The tract, which is just north of the Mohawk and Ahmeek mines, is very irregular and somewhat awkward in outline, heavily covered with drift, and a considerable portion is swampy. Lands carry the Calumet, Kearsarge and Allouez conglomerates, and the Osceola and Kearsarge amygdaloidal beds, dependence being placed mainly on the latter, of which the tract carries about 1½ miles of the strike, the bed outcropping on the northeastern corner of the lands. Property is served by the Keweenaw Central Railway.

A little exploratory work was done, 1865, on the Kearsarge conglomerate, and again, 1880, when 2 shafts were sunk thereon, to a depth of circa 200' each, but work was abandoned, and this part of the tract was set off, as the Ahmeek.

Diamond drilling, begun 1907, will require several seasons to give a complete cross-section of the property, operations having been started on the northwestern part of the tract. The diamond drill borings are said to have given good cores, and some trenching was done, a test-pit being bottomed, December, 1907, in the ledge.

No. 1 shaft, started July, 1908, is located about 3,000' north of No. 1 shaft of the Gratiot mine, and is of 3 compartment size, sunk 60' in the foot-wall of the Kearsarge amygdaloid, which, where exposed, carries epidote. This shaft, circa 175' deep at the end of 1908, is concreted through 14' of overburden, with an anchorage of 44' in the rock, giving 58' of concrete, from the collar, and is perfectly water-tight against surface seepage. The shaft-rockhouse has an 18x24" crusher.

There is room on the tract for a second shaft, on the outcrop of the Kearsarge lode, but this amygdaloidal bed must be reached, on the balance of the property, by vertical shafts, unless adjoining lands carrying the outcrop are secured.

Equipment includes a small power plant building having a 15-drill air-

compressor, a Lake Shore duplex hoist, good for 1,500' depth, and a locomotive firebox boiler. Buildings include a boarding-house and bunk-house. Property considered very promising.

**MINA DA SENZA.****ANGOLA.**

Mine office: Senza do Itombe, Angola. Lands, 2 kilometers from Senza do Itombe and 192 kilometers from Loanda, show a 5-meter bed of calcareous sandstone, dipping at about 20°, said to carry about 5% copper. Idle at last accounts.

**SOCIEDAD MINERA LA SERENA.****CHILE.**

Mine office: Higuera, La Serena, Coquimbo, Chile. Presumably idle.

**SERRANO GOLD & COPPER MINING CO.****MEXICO.**

Office: Main St., Danville, Pa. Letter returned unclaimed from former mine office, La Cananea, Arizpe, Sonora, Mex. J. X. Grier, president; C. E. Yorks, secretary; M. I. Low, treasurer; D. H. Collins, general manager. Organized February, 1903, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 112 pertenencias, south of Cananea, carrying auriferous copper ores. Idle.

**SERRAZANO COPPER CO., LTD.****ITALY.**

Dead. Was a Guernsey promotion, formed to operate in Italy.

**SEVEN DEVILS MINING & DEVELOPMENT CO.****IDAHO.**

Dead. Formerly at Weiser, Washington Co., Idaho.

**SEVILLE SULPHUR & COPPER CO., LTD.****SPAIN.**

Office: 30 George Square, Glasgow, Scotland. Operating office: Patio de Banderas, Sevilla, Spain. Mine office: Aznalcóllar, Sevilla, Spain. Jas. Pipe, chairman; John Munro, secretary; John S. Macdougall, general manager; Robert Andrew, mine manager. Organized August, 1877, under laws of Great Britain, with capitalization £120,000, shares £10 par.

Lands, at the eastern end of the Sierra Morena, in the province of Sevilla, carry iron pyrites having good values in both copper and silver. Property has been worked, by present company, for many years, with marked success. Production was 2,867,200 lbs. fine copper in 1905; 4,589,600 lbs. in 1906, and 5,152,000 lbs. in 1907.

**SEYMORE COPPER MINING CO., LTD.****BRITISH COLUMBIA.**

Office: 41 John Dalton St., Manchester, Eng. H. J. Challoner, secretary. Organized June 25, 1900, under laws of Great Britain, with capitalization £2,000, shares 5s. par, to acquire copper properties at Seymour Narrows, Vancouver Island, British Columbia. Moribund.

**SHAFTER MINING CO.****COLORADO.**

Office: 1 Broadway, New York, N. Y. Mine office: Idaho Springs, Clear Creek Co., Idaho. Employs 20 men. Thos. Peyton, president; M. S. Peyton, vice-president; Chas. D. Ross, secretary and treasurer; Arthur H. Roller, general manager; Edmund Leet, mine superintendent; F. L. Stout, mill superintendent. Organized 1880, under laws of New York, with capitalization \$100,000, shares \$100 par.

Lands carry auriferous and argentiferous copper ores, values apparently being mainly in gold. There is an 80-ton mill having 20 gravity stamps, and equipment includes steam and electric power.

**SHAMBLÜRGSKI WORKS.****RUSSIA.**

Office and works: Tiflis, Russia. A. A. Broli, owner and manager. Property includes sundry small copper mines and a small smelter in Transcaucasia. Produced about 150,000 lbs. fine copper yearly, at last accounts.

**SHAMROCK COPPER CO.****NEW MEXICO.**

Letter returned unclaimed from former mine office, Nogal, Lincoln Co., N. M. W. A. McIvers, who died May 8, 1908, was manager. Lands, 7 miles

from a railroad, show a contact vein of 27' estimated width, between porphyry and quartzite, with a paystreak of about 4' average width, carrying cuprite, with limestone gangue, giving assays of 20% copper, 8 oz. silver and \$4.80 gold per ton, the porphyry wall carrying copper impregnations. Idle and apparently moribund.

#### **SHANGO COPPER MINING SYNDICATE.**

**AUSTRALIA.**

Mine office: Cobar, Robinson Co., N. S. W., Australia. Has a 72' shaft. Presumably idle.

#### **SHANNON COPPER CO.**

**ARIZONA.**

Office: 82 Devonshire St., Boston, Mass. Mine office: Clifton, Graham Co., Ariz. Employs 900 men. Nathan L. Amster, president; A. B. Clough, vice-president; David A. Ellis, secretary; R. Townsend McKeever, treasurer; preceding officers, Wm. A. Paine, B. Hochschild, Col. Chas. Hayden, Archibald McNeil and Jas. Virdin, directors; C. R. Jeffers, assistant secretary and treasurer; J. W. Bennie, general manager; H. H. Dyer, superintendent; Rollo B. Watson, engineer.

Organized Nov. 13, 1899, under laws of Delaware, with capitalization \$3,000,000, shares \$10 par. Bonds, originally \$600,000, at 7%, reduced, Sept. 1, 1908, to \$179,000. Company has a sinking fund of \$60,000 annually, for bond redemption. Boston Safe Deposit & Trust Co., transfer agent. National Shawmut Bank, Boston, registrar. Has 4,620 shareholders. Shares are listed on the Boston Stock Exchange. Annual meeting, third Wednesday in November.

The company controls the Coronado Mining Co., through ownership of 51% of stock issue, and held the property 4 years, under a lease expiring Oct. 8, 1908. Company was said, 1906, to have taken a \$1,500,000 bond and lease on the property of the Copper Belle Mining Co., of Gleason, Cochise Co., Arizona, which property, sold, 1907, was bid in by interests closely connected with the Shannon.

Lands, 43 claims, area circa 400 acres, at Metcalf, in the Greenlee district. Company formerly held 400 acres in mill and smelter sites, but a 300-acre millsite, adjoining the smelter, was sold, 1907, to Arizona Copper Co., Ltd. The Shannon also owns limestone claims, on the Frisco river. The company has a side-line agreement with the Arizona Copper Co., Ltd., by which extraterritorial rights are mutually waived, obviating all possibility of future litigation over apexes.

Ore occurs between limestone and porphyry, under heavy gossans of fairly good hematite, the oxidized ores favoring the limestone, while ores of the porphyry side are mainly silicious sulphides, latter predominating. The ore occurs in very irregular deposits, some up to 300' in the greatest dimension. Many of the ore bodies are large, and while the ore is low in grade, and bumpy, the quantity is very great, and it is probable that the ore bodies continue considerably deeper than once thought, as it was believed, until recently, that ore did not continue workable below the 400' level, below which some ore of 4% copper tenor was found, 1908. The mine shows oxide and carbonate ores, of 4 to 10% copper tenor, in the upper levels, and sulphide ores of 3 to 7% tenor in the lower workings, the sulphide ores being mainly chalcopyrite, with a little chalcocite. The mine, as a whole, is deficient in sulphide ores, and about one-third of the production is silicious ore, too low in grade to smelt, yet too highly oxidized to concentrate well.

Development is by shafts, tunnels and open pits, underground workings reaching a depth of 1,100' below the crest of the mountain. The mine has about 10 miles of workings, with considerable ore reserves, the Little Coronado mine showing ore of 3 to 5% copper tenor, while the Hanson tunnel is said

to show an ore body of 180' width, averaging up to 6% copper. Considerable trouble has been had from caving ground, and it was planned, 1906, giving a trial to the caving system of mining. The property is timbered with 12x12" square sets. In addition to underground workings, there are 4 open pits, giving cheap extraction, some of the open-cuts showing iron ore, carrying an average of 2.5% copper, available for fluxing silicious sulphides produced from underground workings. Extraction is by 2 double-track working tunnels, of which one is 7x8' in size, connecting with a 1,400' double-track incline tram, leading to the Coronado Railroad, with 6 ore-bins at either end, the tramway having an incline of 36°. The incline has 10-ton cars, operated in counter-balance, with a retarding engine, the steel cable passing around a 13' double drum at the top, which runs a small air-compressor that generates power, while serving as an auxiliary brake.

Petroleum has been substituted for coal, wherever possible, about the mine and works. The company maintains general stores at Morenci and Clifton, and owns a number of dwellings for employees.

Freight charges are about 35 cents per ton on ore from the mine to the mill, and the company plans building a 10-mile standard gauge railroad, to be known as the Shannon & Arizona, to handle its own ore. The surveys have been made for this new high-line railway, which it is planned to complete at a cost of \$400,000, with an estimated saving of about \$80,000 yearly, on ore transportation, the company planning to issue bonds and keep the stock of the railway. The new line, in addition to the saving in freight charges, will give immunity from the annual floods, which now cause yearly suspension of shipments, for indefinite periods, with consequent heavy damage. The company also is said to have secured a controlling interest, 1908, in the Clifton Northern Railway.

The concentrator, on the San Francisco river, 8 miles from the mine, is of steel, in 2 connected sections, the 64x95' upper section having a 9x15" Blake crusher at the ore-bin, Huntington mills and a 220' Robins belt conveyer, trommels and jigs. The 57x144' lower section has 33 Frue vanners, 1 Wilfley and 2 Standard tables. The 32x50' steel power-house has two 250-h. p. Stirling water-tube boilers, and a 300-h. p. Nordberg tandem compound engine. Water is taken from wells near the river by a 600-gallon electric triplex pump. The concentrator treats about 400 tons of ore daily, this averaging 3.5 to 5.5% copper, and puts about 5 into 1, effecting a saving of about 75% of contained values. In 1906 tailings carried up to 1.2% copper, due to highly oxidized condition of ores, but tailings are being stored and may be leached later. Formerly there was much trouble from acid waters eating the iron screens, while brass or copper screens in the jigs were worn out too rapidly, by abrasion. This trouble was overcome by a simple but ingenious application of the principle of electrolysis, a low-voltage electric current being applied to the jigs, by which the screen became a cathode in the circuit. This attracted hydrogen from the water, which in turn attacked the metallic salts, and the copper freed was deposited on that portion of the screens formerly eaten away.

The smelter, at Clifton, 7 miles from the mines, designed originally for 5 furnaces, had two 350-ton water-jacket blast-furnaces, each 42x170" at the tuyeres. These 2 furnaces were thrown into one large furnace by a new section between, built on the plan first used at the Washoe works, making a single blast furnace of 1,000 tons daily capacity, which is the largest in Arizona. Above the charging floor are 23 ore-bins, each 20x20x16', with chutes. Fumes from the blast-furnace pass through a 10' dust-flue to a 20x20x100' dust-chamber with hopper bottom, discharging dust periodically into cars on a railroad track in a tunnel beneath, fumes passing from the

dust-chamber, through a 170' flue, to a 150' steel smokestack. Slag losses are said to be only 0.515%. Slags are handled by an electric locomotive. The converter plant, added 1906, has 2 stands, making blister copper. The briquetting plant, for flue dust and fines, has a daily capacity of 60 tons, and there is a small sampling mill, in connection with the smelter.

A 60x80' powerhouse, of steel on stone foundations, has a 300-h. p. tandem compound condensing engine, direct-connected to blowers, and converter blast is supplied by a 250-h. p. Nordberg air-compressor.

Production has been as follows: 11,899,920 lbs. fine copper in 1904; 11,027,453 lbs. in 1905; 11,892,960 lbs. in 1906; 10,874,619 lbs. fine copper, 35,491 oz. silver and 1,250 oz. gold in 1907. For fiscal year ending Aug. 31, 1907, production was 13,418,126 lbs. fine copper, 94,745 oz. silver and 1,257 oz. gold, from 211,857 tons of ore smelted, giving an average extraction of 48 lbs. fine copper per ton, in addition to which circa 2,600,000 lbs. fine copper were produced from 15,338 tons of custom ore smelted. For fiscal year ending Aug. 31, 1908, production was 15,207,768 lbs. fine copper, from 281,449 tons of ore smelted, giving an average extraction of 53.4 lbs. fine copper per ton, in addition to 1,458,000 lbs. fine copper produced from custom ores smelted. Production, October, 1908, was 1,636,000 lbs. fine copper. Costs, as figured by company, were 13.46 cents per pound for fiscal year 1906, 13 cents per pound for fiscal year 1907, and only 11.09 cents per pound for fiscal year 1908.

For fiscal year ending Aug. 31, 1908, receipts were \$2,249,294 from copper, \$63,508 from silver and \$33,626 from gold, with operating expenses of \$2,574,191, leaving a net profit of \$88,841, compared with net profits of \$695,916 for fiscal year 1907 and \$333,324 for fiscal year 1906. The company ended the fiscal year 1907 with quick assets of \$424,744, and current liabilities of \$197,407, giving excess of quick assets of \$227,337. The property is valuable and well managed, and made a better record, during the period of depression, than the average of copper producers.

#### **SHASTA COPPER CO.**

**CALIFORNIA.**

Office and mine: 502 California St., Redding, Cal. J. W. Girdner, president; Simeon D. Furber, secretary; Sherman P. White, treasurer. Organized Apr. 20, 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 2 groups, including the Pit River group of 25 claims, circa 1 mile south of Heroult, showing a good gossan, and the Arizona Consolidated group, 25 claims, 4 miles from Redding, formerly worked for placer gold, showing a mineralized zone of circa 600' width, carrying auriferous and argentiferous copper ores of low average tenor.

#### **SHASTA COPPER MINING CO.**

**CALIFORNIA.**

Dead. Formerly at Shasta, Shasta Co., Cal.

#### **SHASTA GOLD & COPPER CO.**

**CALIFORNIA.**

Dead. Was a stock-jobbing scheme promoted by "Baron" W. E. von Johannsen. Formerly at Redding, Shasta Co., Cal. Described Vol. VI.

#### **SHASTA-KENNETT COPPER CO.**

**CALIFORNIA.**

Mine office: Kennett, Shasta Co., Cal. Organized 1907, under laws of Colorado, with capitalization \$2,500,000, by W. R. Girdner, M. J. Jordan and L. E. Dabold. Lands, near Kennett, have a 600' tunnel, showing considerable bodies of low to medium grade copper ore.

#### **SHASTA MAY BLOSSOM COPPER CO., CONSOLIDATED. CALIFORNIA.**

Office: 6-410 Kearny St., San Francisco, Cal. Mine office: Winthrop, Shasta Co., Cal. Morton Lindley, president; Lucius A. Booth, vice-president; S. Peter, secretary and treasurer; Sumner S. Smith, superintendent. Organized 1903, under laws of Arizona, with capitalization \$10,000,000, shares \$1 par, as a reconstruction of Shasta May Blossom Mining & Smelting Co.

Lands, 18 claims, area 300 acres, 800' from holdings of the Bully Hill, in the Pittsburg or Copper City district, circa 37 miles northeast of Redding, and 16 miles from Terry, the nearest railroad point. Property shows prominent outcrops, the main outcrop being said to be traceable 500', along a slate and rhyolite contact, carrying ore said to give assays of 6% copper and circa \$11.50 per ton combined gold and silver values. Property shows 5 or more contact deposits, having porphyritic footwalls and slate hangings. The middle vein, ranging 5' to 40' in width, and said to be traceable 9,000', carries chalcocite, bornite and chalcopyrite, and is opened by tunnels of 200', 300' and 450', with circa 1,500' of workings, showing a considerable body of sulphide ore, of fair average tenor. The west vein is said to be 40' wide.

Equipment includes an air-compressor and there is a 20x90' machine-shop and 2 other mine buildings.

**SHASTA MAY BLOSSOM MINING & SMELTING CO. CALIFORNIA.**

Dead. Reorganized, 1903, as Shasta May Blossom Copper Co., Consolidated. Formerly at Winthrop, Shasta Co., Cal.

**SHATTUCK-ARIZONA COPPER CO.**

**ARIZONA.**

Office: Duluth, Minn. Mine office: Bisbee, Cochise Co., Ariz. Employs circa 60 men. Thos. Bardon, president; A. Guthrie, vice-president; Archibald M. Chisholm, secretary and treasurer; Lemuel C. Shattuck, managing director; preceding officers and Martin Pattison, directors; Jos. Walker, superintendent; Arthur Houle, consulting engineer. Organized March, 1904, under laws of Minnesota, with capitalization \$3,500,000, shares \$10 par. Is closely connected, in ownership and management, with Denn-Arizona Mining Co. Annual meeting, third Saturday in February.

Lands, 6 claims, patented, area 120 acres, bought for \$1,022,500, lying in the northeastern portion of the Bisbee camp, about one-half mile from the original workings of the Copper Queen, and to the north of the Calumet & Arizona.

The property shows Carboniferous limestone, with intrusive porphyry dykes and a big fault, covered with a silicious iron capping of 30' to 50' width. Owing to the rugged typography of the lands tunnelling is impracticable, neighboring properties holding all tunnel sites, hence development is by shaft. The property has large bodies of oxidized and sulphide ores, apparently averaging 5 to 6% copper tenor, with much ore of better grade, ores carrying up to 8 oz. silver and \$3 gold per ton.

Development is by a 935' shaft, enlarged, 1906, to 3 compartments, 4' 6"x15' in size, connected underground with the Cuprite shaft of the Copper Queen. The shaft was damaged somewhat, late 1907, by fire, but was promptly retimbered. The mine has about 18,000' of workings, with much ore available for extraction, principal ore bodies being developed on the 700' and 800' levels. In October, 1908, a large and promising ore body, of medium copper tenor, was encountered on the 500' level, about 400' from the shaft. The 600' level shows a 60' body of oxidized ore, said to average about 9% copper tenor. The 700' level has large ore bodies developed, and the 800' level has an ore body, in No. 1 stope, circa 100x300' in size, this level showing much high grade ore, with considerable native copper. The 900' level shows a considerable body of sulphide ore, of about 4% copper tenor. Mining work was begun August, 1904, and ore shipments were begun September, 1906.

Equipment includes a 600-h. p. steam plant, with 5 boilers, 9-drill Ingersoll-Sergeant, 6-drill straight-line Sullivan and 25-drill Sullivan cross-compound air-compressors. There are 6x10" and 10x30" auxiliary hoists, and an Allis-Chalmers duplex double-drum hoist, working under 125 lbs. steam pressure, capable of handling, continuously, a 15,000-lb. unbalanced load, at a vertical

hoisting speed of 2,000' per minute, having two 7' drums, each carrying 1,500' of 1½" round steel cable. Fuel is petroleum, with a normal yearly consumption of 2,500 barrels.

There are 10 mine buildings, including a 16x24' carpenter-shop, 15x30' smithy, boiler-house, engine-house and warehouse, and a changing-house with accommodations for 200 men.

Property is served by the El Paso & Southwestern Railway, and has a 500-ton aerial tram of 2,300' length, with an average grade of 18%, supported by 14 towers, of 12' to 40' height, built of 12" timber, set on concrete foundations, the tram leading from the shaft to a 1,000-ton shipping bin, on the El Paso & Southwestern railway.

The smelter site, at Douglas, 26 miles from the mine, is just south of the Calumet & Arizona smelter and west of the Copper Queen works, with water supply available from artesian wells. The company has made plans for a 1,000-ton smelter with 2 blast-furnaces, to cost about \$400,000, but certain strong interests in the company, being desirous that smelting be done by the Copper Queen, have held up the construction of the plant.

Production was begun Aug. 28, 1906, and ended Nov. 7, 1907, on account of the refusal of the Copper Queen to take custom ore, but daily shipments of 75 to 100 tons, to the Copper Queen smelter, were resumed Dec. 14, 1908. For a time during 1907 the mine shipped about 400 tons of ore daily, about half oxidized ores and half sulphides, former going to the Douglass smelter and latter to Globe. Production, 1907, was 5,091,542 lbs. fine copper, with considerable gold and silver values. The mine, as developed, is capable of making a monthly production of about 1,000,000 lbs. fine copper, and is a valuable property, of very great promise.

#### SHAW-GIBSON MINING CO.

#### NEW MEXICO.

Dead. Formerly at Lordsburg, Grant Co., N. M.

#### SHAWMUT CONSOLIDATED COPPER CO.

#### COLORADO & UTAH.

Office: 62-16 State St., Boston, Mass. Mine offices: Bingham Canyon, Salt Lake Co., Utah, and Salida, Chaffee Co., Colo. Lester C. Wead, president; Wm. Rotch, vice-president; Robt. A. Jackson, secretary; Wm. Tudor, treasurer; Herbert Williams, managing director; preceding officers, Alex. Chandler, B. W. Currier, Col. E. J. Mayo, Hon. Samuel S. Powers and John R. Thayer, directors; E. Philbrick, superintendent Colorado mine; Elmer Durfee, superintendent Utah mines.

Organized 1905, under laws of Maine, with capitalization \$2,500,000, shares \$5 par. Has an old outstanding bond issue of \$19,500, and was said, February, 1908, to be negotiating with a French syndicate for the sale of new bond issue, of \$500,000, at 80, but apparently the latter did not furnish the expected funds. The new bond issue was said to be planned for the purchase of additional properties. Company controls the Colorado property through an option, expiring May, 1909, at \$2 per share, on 65,000 shares of the 90,000 shares capitalization of the Sedalia Copper Co., stock being in escrow. The Shawmut pays 15% royalty on ore extracted from the Salida property, such royalty applying pro rata on the purchase price of the stock in escrow, if same is taken. American Loan & Trust Co., Boston, registrar; State Street Trust Co., Boston, transfer agent.

Lands, in Utah, 13 fractional claims, patented, area 152 acres, on the north side of Carr Fork, near the center of the Bingham or West Mountain district, showing limestone, porphyry and quartzite, carrying contact deposits between limestone and quartzite, of which 2, under development, are of 5' estimated average width, carrying sulphide ores, mainly auriferous and argentiferous chalcopyrite and galena, having an estimated average tenor of 5% copper,

26% lead, 2 to 16 oz. silver and \$2.50 to \$5 gold per ton, which figures are considered excessive. Development is by a 230' shaft and 8 tunnels, longest 225', with upwards of 7,000' of workings. On the Cuba claim a 5' ore body has been developed on 2 levels. The company hopes to secure cupriferous porphyry on the Mirror claim.

Equipment of the Utah property includes a 200-h. p. steam plant and a 6-drill Bank air-compressor, with several mine buildings.

The concentrator, at Bingham, of 100 tons rated daily capacity, is of wood, having a 100-ton Gates centrifugal crusher, 2 rolls, 5 Hartz jigs, a Chilean mill and Wilfley tables. The mill is somewhat antiquated in design, and requires remodeling for use.

Lands, in Colorado, 1 claim, area 20 acres, known as the Sedalia mine, and a millsite, circa 6 miles from Salida. The property shows a 35' to 40' vein, carrying, near surface, oxide, carbonate and silicate ores, low in copper tenor, and mainly below smelting grade. At depth the ore is sulphide, said to average 3 to 4% copper and circa \$1.40 per ton in combined gold and silver values, but carrying an average of 4.5% zinc, which renders it difficult to treat. The mine has an extreme depth of circa 700', with about 2½ miles of workings.

The Colorado mill is connected with the Sedalia mine by a 1½-mile tramway. The mill is 76x119' in size, with 4 stories, including a concentrator and leaching plant. The lixiviation plant, which is idle, is said to show a loss of 23% in extraction, as against 15% loss of assay values in smelting.

The Bingham property is idle, work being concentrated at Salida. Production of the Sedalia mine was 5,408 tons of ore, averaging 5.21% copper, yielding 563,513 lbs. fine copper, in 1906, and was 4,209 tons of ore, averaging 6.85% copper, equivalent to 576,696 lbs. fine copper, in 1907.

#### **SHAWMUT GOLD, SILVER & COPPER**

**COLORADO.**

##### **MINING & MILLING CO.**

Office: 430 Symes Bldg., Denver, Colo. Mine office: Bonanza, Saguache Co., Colo. G. C. Moore, president; Chas. E. Eckles, vice-president; H. Astor Bush, secretary; E. E. Humes, treasurer. Organized May 8, 1905, under laws of Colorado, with capitalization \$1,000,000, shares \$1 par. Lands, 22 claims, area 320 acres, on Kerber Creek, said to have about 9,000' of workings. Company in debt and planned liquidation, at last accounts.

##### **SHAWMUT MINING CO.**

**UTAH.**

Dead. Succeeded, 1905, by Shawmut Consolidated Copper Co. Formerly at Bingham Canyon, Salt Lake Co., Utah.

##### **SHAWNEE COPPER CO.**

**COLORADO.**

Office: 424 Central Bldg., Los Angeles, Cal. Mine office: McCoy, Eagle Co., Colo. O. D. Mansfield, president; Chas. J. Price, honorary vice-president; W. R. Price, vice-president and general manager; J. C. McClintock, treasurer; C. W. Dolph, secretary; J. T. Willard, assistant secretary. Organized under laws of Colorado, with capitalization \$500,000, shares \$1 par. Lands, 7 claims, area circa 71 acres, just north of the Price Copper Mines, in the Red Gorge district, reported to show a blanket vein of 5' to 7' width, with quartzite gangue, giving assays of 20% copper, 6 oz. silver and 0.16% gold, which obviously is an error, and probably should be 0.16 oz. gold per ton. Development is by several pits and a 2-compartment 101' shaft, not yet in ore.

##### **SHAWNEE COPPER MINING CO.**

**WYOMING.**

Dead. Was merged, 1908, in Shawnee-Wyoming Mining Co. Formerly at Encampment, Carbon Co., Wyo. Fully described Vol. VI.

##### **SHAWNEE-WYOMING COPPER MINING CO.**

**WYOMING.**

Office: 122½ East Main St., Shawnee, Okla. Letter returned, unclaimed

from former mine office, Encampment, Carbon Co., Wyo. John H. Aydelotte, president; Hon. G. F. Hinton, first vice-president; A. M. Coffin, secretary and general manager. Organized 1908, as a merger of the Shawnee Copper Mining Co. and Kyhaco Mining Co.

Lands, 10 claims, area 200 acres, 6 miles from the New Rambler mine, in the French Creek district of the Medicine Bow Mountains, showing sundry fissure veins in granite and contact deposits between schist and quartzite, of which one vein of bog ore, under development, has a 2-compartment 115' shaft showing copper stains.

Company also holds the property formerly owned by Ak-Sar-Ben Copper Co., which had a strong gossan capping of hematite and limestone, opened by an 80' shaft. Company is said to have found some ore giving good assays in copper, silver and gold.

Equipment includes a 45-h. p. steam plant and 4 mine buildings. Idle, but said to plan early resumption.

#### SHEEP MOUNTAIN MINING & TUNNEL CO.

COLORADO.

Dead. Formerly at Crystal, Gunnison Co., Colo.

#### SHEDDEN & COLUMBIAN MINE.

MICHIGAN.

Office and mine: care of J. H. Rice, Houghton, Houghton Co., Mich. Lands lie next north of the Isle Royale Copper Co. Idle since 1870. Fully described Vols. I and II.

#### SHINONOME SMELTER.

JAPAN.

Owned by Furukawa Mining Co.

#### SHOSHONE COPPER CO.

WASHINGTON.

Office and mine: Latah, Spokane Co., Wash. J. O. Adams, secretary; preceding officer, J. B. Conard, D. H. Conard, J. H. Stockdale, J. W. Olney, A. B. Shelton and Frank Hosier, directors. Organized circa 1908, under laws of Washington, with capitalization \$1,500,000, shares \$1 par.

#### SHOSHONE MINE.

NEW MEXICO.

Office and mine: care of Alex Gusdorf, owner, Taos, Taos Co., N. M. Lands, 4 claims, developed by a 175' shaft, with drifts on the 100' and 150' levels, showing an 8' vein with a 2' paystreak, carrying 5% copper, 10 to 12 oz. silver and \$60 to \$80 gold per ton, balance of vein being claimed to average 5 to 8% copper, 4 to 5 oz. silver and \$10 to \$12 gold per ton. Property considered promising. Idle.

#### SHOSHONE MOUNTAIN MINING CO.

WYOMING.

Mine office: Meeteetse, Big Horn Co., Wyo. P. W. Gates, manager. Lands, on Sparr Mountain, show a wide vein, carrying values mainly in silver-lead, opened by a 560' tunnel, on the Smuggler claim. Idle.

#### SHOTWELL TRI-MOUNTAIN COPPER CO.

ARIZONA.

Dead. Was absorbed, Feb. 19, 1907, by Cornelia Copper Co. Formerly at Gila Bend, Pima Co., Ariz.

#### SHUTTLETON MINE.

AUSTRALIA.

Dead. Merged, December, 1906, in Crowl Creek-Shuttleton Copper Mining Co.

#### SIEGEL CONSOLIDATED MINING CO.

NEVADA.

Mine office: Siegel, White Pine Co., Nev. H. L. Siegel, manager. Lands, in the Silver Cañon district, show oxidized ores, carrying values mainly in silver, and sulphide ores of copper and lead, carrying values mainly in copper. The best grade of silver-lead ore ranges 80 to 200 oz. in silver tenor per ton. Development is by 2 tunnels, showing sulphide ores in No. 2 tunnel, at 250' vertical depth. Ore is hauled by wagon to Curry, 60 miles, but, with the building of a few miles of mountain road, could be brought within 50 miles of

Warm Springs station, on the Nevada Northern railway. Property has been a producer, on a small scale, since 1901.

**SIEERRA ALTO COPPER MINING CO.****ARIZONA.**

Dead. Formerly at Phoenix, Maricopa Co., Ariz. Described Vol. II.

**SIEERRA CO., LTD.****SPAIN.**

Office: 32 Nicholas Lane, London, E. C., Eng. Mine office: 10 Plaza del General Santacildes, Burgos, Burgos, Spain. T. Evans, secretary. Organized Apr. 2, 1898, under laws of Great Britain, with capitalization £400,000, shares £10 par; debentures, £478,100, at 5%. Lands, sundry mines of iron, copper, silver and coal, in the provinces of Burgos and Logroño, Spain. Idle and apparently moribund.

**SIEERRA DE COBEE MINE.****MEXICO.**

Owned by Indiana-Sonora Copper & Mining Co.

**SIEERRA DE ORO GOLD MINING & MILLING CO.****ARIZONA.**

Office and mine: Clifton, Graham Co., Ariz. F. T. Eldredge, president; W. H. Waite, secretary and treasurer; L. P. Potter, manager; Benj. M. Crawford, superintendent. Lands, 15 claims, near the Clifton Consolidated, also a 5-acre millsite, on the San Francisco river. Development is by tunnels, showing 4 parallel blind veins. A 550' crosscut tunnel shows a 10' vein, giving assay values of 14% copper and up to \$10 gold per ton, and a 4' vein giving assays of 14% copper and \$48 gold per ton. Idle.

**SIEERRA GOLD & COPPER CO.****NEVADA.**

Letter returned unclaimed from former office and mine, Reno, Washoe Co., Nev. C. A. Poage, president; DeWitt C. Turner, vice-president; W. B. Dunlap, secretary; W. V. Irwin, treasurer. Organized Apr. 7, 1906, under laws of Nevada, with capitalization \$750,000, shares \$1 par. Lands, 8 claims, area 140 acres, in the Peavine district, circa 20 miles north of Reno, developed by a crosscut tunnel and several shallow shafts. Presumably idle.

**SIEERRA GOLD & COPPER MINING CO.****CALIFORNIA.**

Letter returned unclaimed from former mine office, Loyalton, Sierra Co., Cal. Is said to have high grade auriferous and argentiferous copper ore. Idle.

**SIEERRA MADRE EXPLORATION, LTD.****MEXICO.**

Office: 708 Salisbury House, London, E. C., Eng. J. Keatinge Pollock, chairman; J. W. Gallienne, secretary. Organized Nov. 21, 1900, under laws of Great Britain, with capitalization £60,000, shares 5s. par; issued, £40,000. Debentures, £1,000 authorized, £900 outstanding. Had options on gold and silver properties in the state of Chihuahua, Mexico, which were forfeited. Present landed holdings said to be 200 pertenencias, area 494 acres, in the state of Sonora, supposedly carrying auriferous and argentiferous copper ores. Idle.

**SIEERRA MORENA COPPER MINES, LTD.****SPAIN.**

Office: 2 Basinghall Ave., London, E. C., Eng. Letter returned unclaimed from former mine office, Peñaflor, Sevilla, Spain. R. Stanton, mine manager; J. E. G. Hadath, secretary. Organized Apr. 17, 1900, with capitalization £80,000, shares £1 par; issued, £60,007. Lands, 215 acres, including La Preciosa and adjoining mines. Idle.

**SOCIÉTÉ ANONYME MINIÈRE ET MÉTALLURGIQUE  
LA "SIEERRA NEVADA."****SPAIN.**

Office: 102 Blvd. du Nord, Brussels, Belgium. Mine office: Guejar Sierra, Granada, Spain. Chas. de France, president; preceding officer, Emile Toussaint, Victor-Grégoire Bock and E. LeFevre, directors. Organized March 6, 1895, under laws of Belgium, with capitalization 1,500,000 francs, shares 500 francs par, in 100,000 francs 6% preferred and 1,400,000 francs common shares. Presumably idle.

**SIERRA NEVADA COPPER CO.****NEVADA.**

Mine office: Luning, Esmeralda Co., Nev. Development is by a shallow shaft, said to show ore averaging 15% copper, with small silver and gold values. A little ore was shipped, 1907. Presumably idle.

**SIERRA NEVADA COPPER MINING CO.****IDAHO.**

Mine office: Wardner, Shoshone Co., Idaho.

**SIERRA DE OAXACA MINING & MILLING CO.****MEXICO.**

Office: Nashville, Tenn. Mine office: Ixtlán de Juárez, Oaxaca, Mex. Geo. Clark, superintendent. Mine, known as Santa Catarina, has auriferous and argentiferous copper ores, with steam power, employing circa 50 men at last accounts.

**SIERRA PACIFIC SMELTING CO.****MONTANA.**

Dead. Formerly at Butte, Silver Bow Co., Mont.

**SIERRA SONORA SMELTING CO.****MONTANA.**

Dead. Title changed, 1903, to Sierra-Pacific Smelting Co., also dead. Formerly at Butte, Silver Bow Co., Mont.

**SIERRITA MINING & MILLING CO.****ARIZONA.**

Office and mine: care of J. P. Owen, general manager, Tucson, Ariz. Gerrit B. Linderman, president. Long idle and apparently moribund.

**COMPAÑIA MINERA SIETE AMIGOS.****MEXICO.**

Office: 4 Great Winchester St., London, E. C., Eng. Mine office: Topia, Tamazula, Durango, Mex. Thos. J. Lawrence, president and general manager. Property includes the Comstock, Galena, Guadalupe and other mines, carrying auriferous and argentiferous copper and lead ores. Has steam power and employed circa 50 men, at last accounts.

**SIGNAL COPPER CO.****ARIZONA.**

Dead. Lands sold, circa 1906, to Western Mining & Development Co. Formerly at Planet, Yuma Co., Ariz. Described Vol. VI.

**SIGNET GOLD & COPPER MINING CO.****UTAH.**

Office: Salt Lake City, Utah. Letter returned unclaimed from former mine office, American Fork, Utah Co., Utah. W. H. McConahy, president; J. H. Rothwell, vice-president; W. S. Zehring, secretary; W. H. Young, treasurer; preceding officers and H. A. Hoppaugh, directors. Organized, November, 1903, under laws of Utah, with capitalization \$75,000, shares 25 cents par. Lands, 4 claims, in process of patenting, known as the Signet group, in American Fork Cañon, slightly developed. Idle several years.

**SILERS MEADOWS COPPER CO.****NORTH CAROLINA.**

Mine office: Bushnell, Swain Co., N. C. Lands, circa 1,900 acres, in the Smoky Mountains, on the Tennessee copper belt. Has 11 shafts and tunnels, all showing ore, said to give average assays of 5.5% copper and \$1.80 per ton in combined silver and gold values. Idle several years.

**SILVER BAR COPPER MINING CO.****NEW MEXICO.**

Dead. Property sold, circa 1902, to Mogollon Gold & Copper Co. Formerly at Cooney, Socorro Co., N. M. Described Vol. II.

**SILVER BELL COPPER CO.****ARIZONA.**

Dead. Title changed, 1903, to Imperial Copper Co. Formerly at Silver Bell, Pima Co., Ariz. Described Vol. III.

**SILVER BELL SMELTER.****ARIZONA.**

Owned by Southern Arizona Smelting Co.

**SILVER BOW MINE.****MONTANA.**

Owned by Butte & Boston Consolidated Mining Co.

**SILVER BOW MINING CO.****MONTANA.**

Office and mine: Butte, Silver Bow Co., Mont. G. E. DeSnell, E. H. Benish, D. S. Mack, David J. Charles and Thos. Stephens, directors. Organ-

ized Sept. 28, 1905, under laws of Montana, with capitalization \$20,000, shares \$1 par. Property apparently was the Metz claim, relocated January 1, 1904, as the Compromise claim, by forbears of the company, but apparently title was lost to Jos. J. Culbert.

**SILVER CITY COPPER CO.****ARIZONA.**

Office: Silver City, N. M. Mine office: Santa Rita, Grant Co., N. M. C. C. Shoemaker, president; E. A. Layne, vice-president; A. F. Kerr, secretary and treasurer; preceding officers, O. C. Hinman, Max Schutz, W. B. Walton, Chas. A. Farnsworth and Saml. Allen, directors; Harry Kline, manager. Organized February, 1907, with capitalization \$2,500,000, shares \$10 par. Lands, circa 290 acres, near the Santa Rita mine, having several shafts, showing lead and copper ores. Is said to have a small concentrator.

**SILVER CLIFF GOLD & COPPER MINING CO., LTD.****IDAHO.**

Mine office: Mullan, Shoshone Co., Idaho. Jas. D. Young, president and general manager; Ed. P. Young, secretary and treasurer. Lands, 18 claims, 7 miles from Mullan, developed by 3 tunnels, longest 1,315', showing chalcocite, bornite and chalcopyrite, giving assays up to 43% copper, with some lead and fair gold values. Has a Pelton wheel, operating under a head of 240', and an 8-drill air-compressor.

**SILVER CLIFF MINING CO.****UTAH.**

Mine office: Brighton, Salt Lake Co., Utah. Chas. A. Selby, president; Herbert S. Wright, vice-president; John W. Carlson, secretary and treasurer. Organized circa January, 1908, under laws of Utah, with capitalization \$130,000, shares \$1 par.

**SILVER CREEK GOLD & COPPER MINING CO.****WASHINGTON.**

Office: care of Hugh Clemens, president, Manchester, Iowa. Letter returned unclaimed from former mine office, Index, Snohomish Co., Wash. Organized 1896, with capitalization \$1,000,000, shares \$1 par. Lands, 2 claims, in the Silver Creek district, having 2 short tunnels. Idle and apparently moribund.

**SILVER CREEK GOLD MINING CO.****WASHINGTON.**

Office: Everett, Wash. Letter returned unclaimed from former office, Index, Snohomish Co., Wash. A. J. Westland, president; W. B. E. Edwards, secretary. Capitalization \$1,000,000, shares \$1 par. Lands, 6 claims, circa 10 miles from Index, opened by about 500' of tunnels, said to show a vein of fair size, carrying small copper values and fair gold and silver values. Idle some years and presumably moribund.

**SILVER CREEK MINING & MILLING CO.****WASHINGTON.**

Office: 804 East Washington St., Greensburg, Ind. Mine office: Keller, Ferry Co., Wash. R. L. Boyle, president and general manager; Harry A. Dentor, vice-president; Ira J. Hollensbe, secretary and treasurer; John S. Badger, superintendent; preceding officers and R. Ray Hamilton, directors. Organized December, 1900, under laws of Washington, with capitalization \$75,000. Company is closely connected with the Keller & Indiana Smelting Co. Lands, 4 claims, patented, area 80 acres, including the Gold Cord mine, in the San Poil district, 5 miles northeast of Keller, well timbered and watered. Silver Creek, near by, is capable of producing considerable water power. Lands show a fissure vein, in diorite, of 3' to 8' width, with a 30" paystreak carrying cuprite, azurite, malachite, bornite and chalcopyrite, with quartz gangue, opened by a 304' shaft and by tunnels of 130' and 620', with tunnels connected by a 195' winze. Plans installing electric power, and beginning production when Keller & Indiana smelter is blown in.

**SILVER FISSURE MINING CO.****MONTANA.**

Office: 377 Broadway, New York, N. Y. Mine office: Polaris, Beavér-

head Co., Mont. Henry H. Armstead, general manager; Jas. B. Ford, mine manager; J. F. C. Wells, smelter superintendent. Property is the Polaris mine, carrying silver, gold and copper ores, latter produced in small quantities as a by-product. Has steam and electric power, with a 100-ton smelter, employing about 100 men.

**SILVER FLAT MINING & MILLING CO.**

UTAH.

Office: care of Abel John Evans, Lehi, Utah. Mine office: American Fork, Utah Co., Utah. Capitalization \$50,000, shares 10 cents par. Lands, 5 claims, in the Silver Lake district, carrying auriferous and argentiferous copper and lead ores. Idle some years and apparently moribund.

**SILVER HILL CONSOLIDATED COPPER CO.**

ARIZONA.

Office: Tucson, Ariz. Mine office: Silver Bell, Pinal Co., Ariz. Col. Wm. Herring, president; T. M. Smith, secretary; preceding officers and John N. Ross, directors. Capitalization, \$3,000,000, shares \$1 par. Lands, 6 patented claims, area 120 acres, in the Silver Bell Mountains, 3 miles from Silver Bell, opened by tunnel, with about 1,000' of workings, having an extreme depth of 200', showing copper carbonates and sulphides, apparently occurring as contact deposits between limestone and granite.

**SILVER HILL MINING CO.**

NORTH CAROLINA.

Mine office: Silver Hill, Davidson Co., N. C. J. M. Prim, superintendent, at last accounts. Has auriferous and argentiferous lead, copper and zinc sulphides. Has a mill with crusher, rolls and 5 stamps. Idle several years.

**SILVER KING GOLD & COPPER MINING CO.**

IDAHO.

Mine office: Mackay, Custer Co., Idaho. Development is by tunnel, with a shallow shaft. Presumably idle.

**SILVER LEAF MINING CO.**

NEVADA.

Mine office: Luning, Esmeralda Co., Nev. Property is said to show highly argentiferous copper ores. Employed 12 men at last accounts.

**SILVERMAN-ALASKA MINING CO.**

ALASKA.

Office: 11 Broadway, New York, N. Y. Mine office: Ketchikan, Alaska. Supposedly organized under laws of New Jersey. Lands, on Prince of Wales Island, are said to show auriferous copper ores, of good grade, with considerable development. Idle several years.

**SILVER MOUNTAIN MINE & MILL CO.**

COLORADO.

Mine office: Empire, Clear Creek Co., Colo. F. G. Bishop, superintendent. Property has auriferous and argentiferous copper ores, with water power and a 25-ton concentrator.

**SILVER MOUNTAIN MINING CO.**

COLORADO.

Dead. Succeeded by Silver Mountain Mine & Mill Co. Formerly at Empire, Clear Creek Co., Colo.

**SILVER MOUNTAIN MINING CO.**

IDAHO.

Mine office: Mullan, Shoshone Co., Idaho. Lands, 4 claims, patented, west of the Morning mill, opened by a 450' tunnel showing high grade copper ore.

**SILVER PEAK MINING CO.**

WASHINGTON.

Office: care of Gale Smith, secretary, Spokane, Wash. Mine office: Chehalis, Stevens Co., Wash. Conrad Wolfe, president; F. R. Clark, first vice-president; Capt. Hugh James, second vice-president and general manager. Lands, circa 200 acres, having a 90' shaft, showing a 4' vein carrying oxidized ores, mainly azurite, assaying 4.7 to 22.7% copper.

**SILVER QUEEN MINING CO.**

ARIZONA.

Office: 446 Pearl St., New York, N. Y. Mine office: Superior, Pinal Co., Ariz. Wm. D. Fisk, general manager. Organized 1880, but inactive until a recent change in management. Apparently succeeded by Copper Queen Mining Co.

**SILVER SHIELD MINING CO.****UTAH.**

Office: Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Hon. Harry S. Joseph, manager. Property shows a 4' ore body, said to give selected ores assaying about 6% copper, 27 oz. silver and \$2.40 gold per ton, also an ore body said to average about 1% copper, 8% lead, 10 oz. silver and \$1 gold per ton, in addition to which there is a considerable body of low grade concentrating ore.

Equipment includes a 5-drill air-compressor and a 15-ton mill, near the mouth of the Silver Shield tunnel. A proposed consolidation with the United Bingham was not effected.

**SILVER SPUR COPPER MINE.****AUSTRALIA.**

Mine office: Stanthorpe, Queensland, Australia. Property, formerly known as the Texas mine, reopened 1906, has a 5' vein, developed by shaft to shallow depth, giving assays said to average 21% copper. Production, June, 1907, was 43 tons, 18 cwt., 1 quarter, 4 lbs. of copper ore, ounces, unfortunately, being omitted from the returns.

**SILVER SPUR MINING CO., N. L.****AUSTRALIA.**

Office and mine: Silver Spur, Stanthorpe Co., Queensland, Australia. Employs 200 men. Robt. Thos. Vyner, chairman; Edgar Hall, secretary, treasurer and general manager; Harry Wann, mine superintendent. Organized 1879, under laws of Queensland, with capitalization £24,000, shares £1 par, fully issued; 15s. paid in. Has paid dividends, to end of 1906, of £19,650. Annual meeting, in March.

Lands, 49 acres, leasehold from the crown, and a 3-acre millsite, 51 miles from the State Railway. Lands show Gympie beds, with slate and Carboniferous limestone, having 4 fissure veins in slate, carrying lenticular ore bodies, all under development, ranging 4' to 30' in width, the main ore body being 6' to 30' wide on the 300' level. Ore is exclusively sulphide, and complex, rendering it difficult to mill, averaging about 1.25% copper, 12% lead, 15% zinc, 26 oz. silver and 2s. gold per long ton, values being mainly in silver. Development is by shafts of 180', 420', 80' and 80', and deepest level is at 400'. Mine was opened 1892, and has been worked continuously since.

Equipment includes a 350-h. p. steam plant, with a hoist and a 5-drill straight-line air-compressor. Fuel is coke and wood, latter costing 12s. per cord. The company has a sawmill and brickyard.

The company controls a coal mine, near Ashford, New South Wales, and is erecting coke ovens.

The concentrator, having a Krupp ball mill, replacing a Chilean mill, and 2 jigs, was rebuilt, 1908. Ore is received by tram-line from the mine.

The smelter, rated at 35 tons daily capacity, has a Ropp calciner, a 42x100" Austin water-jacket pyritic blast-furnace, of 60 tons rated daily capacity, which is incomplete, and two 18-ton reverberatory furnaces, making matte carrying an average of circa 30% copper, 600 oz. silver and 1.5 oz. gold per long ton, sent to Europe for reduction. Bauxite bricks are used for lining the firebox of the reverberatory furnaces, and fuel is wood. The smelter also has a Huntington-Heberlein converter pot, installed 1907.

Production has been as follows: 71,680 lbs. fine copper in 1903; 98,560 lbs. in 1904; 175,840 lbs. fine copper, 51 long tons lead, 166,869 oz. silver and 202 oz. gold in 1906; 176,960 lbs. copper and 150,353 oz. silver, with lead and gold production, secured from the treatment of circa 7,500 tons of ore, in 1907. The company plans resumption of lead smelting, and completion of coke ovens, in 1909.

**SILVER TIP GOLD MINING CO.****WASHINGTON.**

Dead. Formerly at Maple Falls, Whatcom Co., Wash.

**SILVERTON MINING CO.****COLORADO.**

Office: 1612 Ashland Blk., Chicago, Ills. Mine office: Silverton, San Juan Co., Colo. M. F. Levy, president; W. L. Springer, vice-president; Walter J. Gibbons, secretary; John Makin, treasurer; Thos. R. Henahan, general manager. Lands, on Sultan Mountain, including the North Star mine, are said to have produced \$1,000,000 in silver values, before 1893. Is driving a long tunnel, hoping to open a good ore body. Has steam and water power and a 20-stamp mill.

**SILVERTON MINING CO.****WASHINGTON.**

Dead. Formerly at Silverton, Snohomish Co., Wash.

**SIMILKAMEEN COPPER MINES CO.****BRITISH COLUMBIA.**

Dead. Formerly at Princeton, Boundary district, B. C.

**SIMILKAMEEN MINING & SMELTING CO., LTD.** **BRITISH COLUMBIA.**

Office: care of Chas. F. Law, secretary, Vancouver, B. C. Mine office: Princeton, Boundary district, B. C. Fred Buscombe, chairman; W. H. Armstrong, managing director; preceding officers, E. J. McFealey and Clarence Marpole, directors. Organized 1905, under laws of British Columbia, with capitalization \$2,000,000, shares \$10 par.

Lands, 5 claims, 3 crown-granted, area circa 200 acres, known as the St. Lawrence and St. George groups, 8 miles from Tulameen City, on Bear Creek, a tributary of the Tulameen river, in the Similkameen division of the Boundary district. Lands, well timbered, have a 250-h. p. available waterfall. Development is by 4 shallow shafts, of circa 50' depth each, a short tunnel, and numerous trenches, showing a strong ore body, between schist and granite, with intrusive porphyry dikes. The St. Lawrence mine has two 50' shafts, showing an 8' vein of massive cupiferous iron sulphide, giving average assays of about \$10 per ton in copper, silver and gold. The St. George group shows a 4' vein, carrying ore with quartz gangue, giving average assays of 1.38% copper, 2.08 oz. silver and \$53 gold per ton. Property considered promising. Idle.

**SINAI MINING SYNDICATE.****ARABIA.**

Mine office: Mt. Samarah, Arabia, care of G. Beyts & Co., Suez, Egypt. M. Wanner, mine manager, at last accounts. Property is sundry old argentiferous copper mines, worked by the early dynasties of Egyptian kings, and abandoned probably some 1,500 years before the Rio Tinto was first opened by the Phoenicians, which latter event occurred circa 1100 B. C. A little work was done, in 1903. Presumably idle for another 4,500-year period.

**SINALOA EXPLORATION CO.****MEXICO.**

Office: Commonwealth Trust Bldg., St. Louis, Mo. Mine office: Guadalupe de los Reyes, Cosalá, Sinaloa, Mex. Geo. B. Clark, president; Dr. H. H. Born, secretary; Chas. Wiggins, treasurer; preceding officers, Chas. H. Filley, John Hartman, Henry Leschen, Chas. M. Rhodes and W. S. S. Rodgers, directors. Capitalization \$500,000, shares \$1 par. Lands include 7 square miles of miscellaneous timber and mineral lands. Property included the Santa Eduwiges and La Luz mines, which have been disposed of, for stock interests, to the Metates Mining Co., and another corporation. Idle.

**SINALOA & SONORA MINING & SMELTING CO.****MEXICO.**

Dead. Formerly in Sinaloa, Mexico.

**SIN RIVAL COPPER CO.****ARIZONA.**

Office: care of Wm. G. Kirchoff, Los Angeles, Cal. Mine office: Superior, Pinal Co., Ariz. Lands, 25 acres, near the Silver Queen and Lake Superior & Arizona mines.

**SISKIYOU COPPER & GOLD DEVELOPING CO.****CALIFORNIA.**

Office: Medford, Ore. W. M. Baxter, president; Ernest Huth, secretary; Chas. Huth, treasurer. Organized Aug. 13, 1908, with capitalization \$100,000.

Lands, 75 miles from a railroad, in Siskiyon county, California, are said to show a vein of circa 100' width, giving assays of 4.5% copper and \$4.54 gold per ton.

**SISKIYOU COPPER MINING CO.** CALIFORNIA.

Office: Lewiston, Idaho. Mine office: Ashland, Jackson Co., Ore. W. R. Oxley, president; Robt. Hall, vice-president; C. E. Monteith, secretary; preceding officers, G. W. Holmes, H. E. Babcock, Robt. E. Kizer and J. F. Reddy, directors. Organized Oct. 10, 1905, under laws of Idaho, with capitalization \$1,000,000, shares \$1 par. Lands, 4 claims, area 80 acres, near the Blue Ridge mine, in the Upper Applegate district, having tunnels of 75', 100' and 125', said to give a good showing of ore. Idle.

**SISKIYOU GOLD & COPPER CO.** CALIFORNIA.

Dead. Was a swindle, perpetrated by "Baron" W. E. von Johannsen. Formerly at Rollins, Siskiyou Co., Cal. Described Vol. VII.

**SISKIYOU GOLD & COPPER MINING CO.** CALIFORNIA.

Dead. Formerly had an office at 44 Central Block, Salt Lake City, Utah.

**SIX EAGLES MINING CO.** WASHINGTON.

Office: Olympia, Wash. Mine office: Loomis, Okanogan Co., Wash. Robt. Frost, superintendent, at last accounts. Has auriferous and argentiferous lead and copper ores.

**SJANGELI MINES.** NORWAY & SWEDEN.

Mine office: Sjangeli, Nordland, Tromsö, Norway. Lands, circa 30 miles from the coast, with good water power available, include the Sjangeli, Alakats, Valfjord and Ruopeuokjaure groups, mainly in Norway but partly in Sweden. Country rocks are hornblende schists, with narrow strata of limestone and lenticular bodies of massive gabbro, ores occurring in the schists as cuprite, chalcocite, bornite and chalcopyrite, assaying 2.5 to 55% copper, with an average tenor estimated at 12.5%, which probably is too high. Development is slight. Property considered promising. Idle.

**SKYLARK COPPER MINING & MILLING CO.** UTAH.

Dead. Was merged, Sept. 1, 1908, in the Utah United Copper Co. Formerly at Milford, Beaver Co., Utah. Fully described Vol. VII.

**SLATE CREEK MINING CO.** ARIZONA.

Dead. Formerly at Prescott, Yavapai Co., Ariz.

**SLATE CREEK MINING & MILLING CO.** WYOMING.

Dead. Formerly at Wheatland, Laramie Co., Wyo.

**SLATER COPPER MINES CO.** MISSOURI.

Dead. Formerly, circa 1901, at Eminence, Shannon Co., Mo.

**SLEEMINABAD COPPER CO.** INDIA.

Office: care of P. C. Dutt, manager, Residency Road, Jubbulpore, Central Provinces, India. Mine office: Sleeminabad, Central Provinces, India. Lands are 1½ miles from Sleeminabad, on the East Indian Railroad, 40 miles from Jubbulpore, and 650 miles from Bombay, almost in the centre of India. The formation is of Silurian age, showing dolomite, slate, quartzite, mica-schist and jaspelite, much crumpled and metamorphosed, with numerous porphyry dikes, ore occurring in the vicinity of the porphyry. The Dharwar schists, here seen, belong to the same geological horizon as the Kolar gold fields. Country rocks have a generally east and west strike, and southerly dip, with veins occurring at approximately right angles and having a westerly dip. The veins have well defined walls, with considerable fluecan, showing slickensides. The property shows 16 veins, in a radius of 10 miles, veins averaging 6' width, one vein outcropping for nearly 2 miles. Development is by a 100' vertical shaft, and some diamond drilling has been done, showing auriferous and argentiferous malachite and tetrahedrite, giving assay values, according to the Indian Government Survey, up to 25% copper, 197 oz. silver and 15

dwts. gold per long ton. Ore produced has been sold for £7 5s. 6d. per ton. Property is considered worthy of careful investigation. Presumably idle.

**SLIDE ROCK MINE.** **MEXICO.**

Office: care of Alpheus McCallum, 162 Randolph St., Chicago, Ills. Mine office: Magdalena, Socorro Co., N. M. Lands, 6 claims, area 120 acres, in the Magdalena district, 2 miles from the Santa Fé railway, held under bond and lease by Alpheus McCallum, Dr. Alex. McCallum and Dr. W. W. McCallum. Property has tunnels of 120' and 200', showing ore assaying up to 21.2% copper, 6 oz. silver and \$19.84 gold per ton, with occasional lead and zinc values. Presumably idle.

**SLIDING ROCK COPPER PROPRIETARY, N. L.**

**AUSTRALIA.**

Dead. Received a £2,000 subvention from the state, and repaid 12s. thereon, property reverting to the state. Formerly in South Australia.

**SLOCUM COPPER CO.**

**ARIZONA.**

Mine office: Phoenix, Maricopa Co., Ariz. Lands, in the Winifred district, 22 miles north of Phoenix, have shafts of 130' and 150', showing ore assaying well in copper, silver and gold. Property is said to have a 10-ton smelter, and company is said to plan increasing capacity to 100 tons daily, but should open a mine first.

**SMELTING & REFINING COMPANY**

**AUSTRALIA.**

**OF AUSTRALIA (1901), LTD.**

Dead. Succeeded by Australian Smelting Corporation, Ltd. Formerly at Dapto, N. S. W., Australia. Described Vol. V.

**SMOKEHOUSE MINING CO.**

**MONTANA.**

Office and mine: Butte, Silver Bow Co., Mont. Bernard Noon, general manager. Property includes the Detroit, National and Copper Bottom claims, also the Smokehouse mine, which consists of a city lot, in the heart of Butte. Was controlled, 1908, through ownership of a large majority of stock, by Davis-Daly Estates Copper Co., and presumably is controlled by successor of latter, the Davis-Daly Copper Co. Mine is described under title of latter.

**SMUGGLER GOLD & COPPER MINING CO.**

**WASHINGTON.**

Office: 202½ Stark St., Portland, Ore. Mine office: Index, Snohomish Co., Wash. McKinley Mitchell, president; Samuel Hart, secretary; D. S. Williams, treasurer; W. J. Walters, general manager. Organized July, 1904, under laws of Washington, with capitalization \$1,000,000, shares \$1 par; issued, \$600,000. Lands, 19 claims, in the Silver Creek district. Presumably idle.

**SNAKE RIVER CONSOLIDATED MINING CO.**

**WYOMING.**

Office: 319 Keith and Perry Bldg., Kansas City, Mo. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. Chas. W. German, president; Geo. Creel, vice-president; L. E. Wyne, secretary and treasurer. Organized July, 1906, under laws of Wyoming, with capitalization \$5,000,000, shares \$5 par. Lands, 9 claims, area 180 acres, also 520 acres of placer lands, with total holdings of 700 acres, in the Three Forks district, 26 miles from a railroad. Has several pits and shafts of 10' to 90' depth, and several tunnels of 50' to 440' length, showing mainly silver-lead ores, with some copper and zinc.

**SNAKE RIVER MINING CO.**

**IDAHO.**

Letter returned unclaimed from former mine office, Heath, Washington Co., Idaho. Is said to have opened a 24" vein of ore assaying 40 to 50% copper.

**SNOHOMISH MINE.**

**MONTANA.**

Owned half and half by Butte Coalition Mining Co. and Butte & Boston Consolidated Mining Co.

**SNOQUALMIE COPPER MINING CO.**

**WASHINGTON.**

Letter returned unclaimed from former mine office, Skykomish, King Co.,

Wash. Lands, 8 claims, known as the Mountainview group, near the Dutch Miller mine, on the middle fork of the Snoqualmie river, showing a ledge of 200' claimed width, opened by 3 tunnels, each showing auriferous and argentiferous copper ore, said to be of high grade. Idle.

**SNOWBALL COPPER MINING CO., N. L.****AUSTRALIA.**

Mine office: Gundagai, N. S. W., Australia. Lands, 38 claims, leasehold, on Snowball Hill, 3 miles from Mount Horeb railway station, and 9 miles south of Gundagai. Mine, discovered 1873, was worked vigorously, 1876-1880, employing up to 400 men. Main shaft, 210', sunk by old company, shows a vein of 30" extreme width, carrying argentiferous and slightly auriferous melaconite, assaying 25% copper. Also has a new shaft of 25'. In 1907 shipped 95 long tons of 6.4% copper ore to the Blayney smelter.

**SNOW CLIFF COPPER MINING CO., LTD.****MONTANA.**

Office: 719 Bank St., Wallace, Idaho. Mine office: Saltese, Missoula Co., Mont. Andrew G. Gordon, secretary. Incorporated, circa 1907, under laws of Idaho, with capitalization variously given as \$150,000 and \$500,000.

**SNOWDRIFT MINING CO., LTD.****MONTANA.**

Office: Wallace, Idaho. Mine office: Saltese, Missoula Co., Mont. Peter Lundin, H. M. Force, W. J. Johnson, W. J. Rhodes and Jas. A. Wayne, directors. Organized 1907, under laws of Idaho, with capitalization \$1,500,000, shares \$1 par.

**SNOWSHOE COPPER MINING CO.****MONTANA.**

Mine office: Canyon Ferry, Broadwater Co., Mont. Idle and presumably moribund.

**SNOWSHOE GOLD & COPPER MINES, LTD.****BRITISH COLUMBIA.**

Office: 717 Salisbury House, London, E. C., Eng. Mine office: Phoenix, Boundary district, B. C. Earl of Chesterfield, chairman; Geo. S. Waterlow, D. L., J. P., vice-chairman; H. W. Batty, secretary; Anthony J. McMillan, managing director; J. W. Astley, superintendent; J. H. Trevorow, mine superintendent. Organized Jan. 20, 1901, under laws of Great Britain, with capitalization £250,000, shares £1 par; issued, £198,155. Property is under lease to the Consolidated Mining & Smelting Co. of Canada.

Lands, 4 claims, freehold, area 120 acres, about a quarter-mile from the Granby, showing fissure replacements of 25' to 200' width, with an average of about 100', traceable 1,000', carrying chalcopyrite averaging about 1.5% copper and \$1.25 gold per ton, ore occurring occasionally in distinct bodies, somewhat mixed, but mainly disseminated, in minute particles, through a silicious to calcareous gangue, with occasional magnetite and specular hematite. Development is by tunnels of 200', 250' and 600', with shafts of 200' and 300', the main shaft having 3 compartments, but bulk of production is secured from open-cast workings.

Equipment includes a 150-h. p. double-drum electric hoist, raising 2-ton skips, and the high-pressure half of a 30-drill Band Corliess cross-compound condensing air-compressor.

Production has been as follows: 20,000 tons of ore in 1902; 74,000 tons, mined at an average cost of \$1.10 per ton, in 1903; 125,001 tons in 1907, shipped to Greenwood and Trail smelters, yielding circa 3,125,000 lbs. fine copper. The ore body is low in grade, though of great size, and apparently the property can be operated profitably only on the basis of copper at about 16 cents per pound.

**SNOWSHOE MINING CO.****IDAHO.**

Office: Wallace, Idaho. Mine office: Mullan, Shoshone Co., Idaho. Wilbur D. Greenough, manager. Capitalization \$1,500,000, shares \$1 par. Lands, sundry claims, partly patented, shortly west of the Snowstorm mine, supposed

to carry the extension of the Snowstorm ore body. Has a crosscut tunnel showing auriferous copper ore, without silver values. Idle.

**SNOWSLIDE MINING & MILLING CO.** IDAHO.

Dead. Was organized circa August, 1906, with capitalization \$1,000,000. Geo. Snow was president. Formerly at Mullan, Shoshone Co., Idaho.

**SNOWSTORM EXTENSION MINING CO., LTD.** IDAHO.

Office: Chicago, Ills. Mine office: Mullan, Shoshone Co., Idaho. C. M. Vaughn, president; C. M. Sommers, vice-president; J. K. Scott, secretary and treasurer. Capitalization \$1,000,000, shares \$1 par. Lands, 4 claims, 1 fractional, said to be in the vicinity of the Snowstorm mine.

**SNOWSTORM GOLD & SILVER MINING & MILLING CO.** COLORADO.

Mine office: Durango, La Plata Co., Colo. J. E. Downer, manager, at last accounts. Ores are said to carry gold, silver, copper and mercury. Has water power and a 10-stamp mill. Idle.

**SNOWSTORM MINING CO.** IDAHO.

Office and mine: Larson, Shoshone Co., Idaho. Employs about 300 men. Thos. L. Greenough, president; Wilbur D. Greenough, vice-president and general manager; C. D. Miller, secretary and treasurer; preceding officers, P. J. Kline, Jas. Bean, J. H. Heward and H. E. Chaney, directors; Leo Greenough, superintendent.

Organized 1899, under laws of Idaho, with capitalization \$1,250,000, increased, 1906, to \$1,500,000, shares \$1 par. Net earnings were \$5,677 in 1905, \$144,322 in 1906, and \$498,013 in 1907, gross receipts of latter year being \$875,919. Dividends were \$90,000 in 1906, \$360,000 in 1907, and \$150,000 in 1908.

Lands, 11 claims, 7 patented, area circa 220 acres, also a 2-acre millsite, with 300 acres available for tailings, on Stevens Peak, east of Mullan, in the Hunter district, near the Montana boundary. Property shows a fissure vein of 10' to 35' width, with an average width of circa 20', developed for nearly 1,000' in length. Apparently the ore body is an impregnated cupriferous zone, conforming to the bedding planes in Algonkian quartzite. The ore is highly silicious, and devoid of iron and alumina, being mainly carbonate to depth of 750', succeeded by slightly silicious chalcocite, with some bornite and chalcopyrite, the bornite occasionally carrying native silver in quantities up to 1,000 oz. per ton, disseminated in quartzite, all ores being more or less argentiferous, and averaging probably 4 to 4.5% copper, 6 to 7 oz. silver and circa \$2 gold per ton, though considerable ore is produced averaging 8% copper.

The mine has a 200' shaft, but development is mainly by 4 tunnels, No. 3, having a back of 1,200', showing an ore chute circa 25' in width and about 850' in proven length, with No. 4 tunnel driven 500' vertically below No. 3. Estimates of ore blocked out range from 1,000,000 to 3,000,000 tons, and probably 1,500,000 tons would be a fair figure, the mine having very large ore reserves.

The mine is connected with the railway spur at Larson by a 7,300' tram-line from No. 2 tunnel and a 3,000' Riblet aerial tram from No. 3 tunnel.

Electric energy is used throughout, the power installation including 5 motors and an electric light plant, water being brought through a 4½-mile pipe-line, generating 300 h. p. Equipment includes 20-drill and 40-drill air compressors, driven by direct-connected electric motors.

Buildings include a 40x50' office, machine-shop, smithy and sawmill, at the mouth of tunnel No. 3, a changing-house and 2 large 2-story hotels, with accommodations for 300 workmen, these being 52x84' and 40x200' in size, the latter having cost circa \$50,000.

The mill, near the mine, was remodeled and enlarged, 1907, when 3 large

leaching tanks were added. The mill, of 300 tons nominal daily capacity, operated by 4 electric motors, includes a 125-ton leaching and precipitation plant, treating carbonate ores averaging 2 to 3% copper and circa 7 oz. silver per ton, which is said to obtain an extraction of about 90% of the assay values. The ore is crushed and then run into 3 agitators, where mixed with a 10% solution of sulphuric acid with calcium chloride, forming a solution of copper sulphate, which goes from the agitators through a series of 6 settling vats, where the copper is precipitated on scrap iron, and silver is precipitated as a chloride, the solution being passed through settling vats and the silver separated from the clear solution by sodium sulphite, filtered and shipped for refining.

The upper levels of the mine formerly were operated, under a 5-year lease, on royalty, by J. H. Heward & Co., but the lease was bought by the company, Aug. 4, 1906.

Production, begun 1904, ceased November, 1907, owing to depression in the metal market, but was resumed Feb. 20, 1908. For 1908 and 1907 the ores are said to have averaged returns of about 5% copper and 7 oz. silver per ton. Production, 1906, was 6,233,940 lbs. fine copper, and for fiscal year 1907 was 87,503 tons of ore, of which 9,721 tons were treated at the mine and 77,782 tons were shipped to smelters, yielding circa 10,000,000 lbs. fine copper and 596,000 oz. silver. The mine ended 1908 with daily shipments of about 500 tons, sent mainly to the Washoe works, with smaller shipments to smelters at Butte, Tacoma, Greenwood and Great Falls. Apparently the mine is capable of yielding 1,500 tons of 5% ore daily, on present development, which would give an annual output of about 22,500,000 lbs. fine copper, though in all likelihood several years will be required to reach this figure. The property is one of exceptional value and future promise, and is well managed.

#### **SNOWSTORM MOUNTAIN COPPER MINING CO. IDAHO.**

Dead. Formerly at Mullan, Shoshone Co., Idaho.

#### **SNOWTOP MINING CO.**

Office: Detroit, Mich. Mine office: Port Hill, Kootenai Co., Idaho. A. B. Marinette, president; A. S. Brown, secretary. Capitalization \$2,000,000. Lands, 13 claims, area circa 250 acres, also 4 timber claims, in the Creston division of the Boundary district of British Columbia, lying 3 miles north of the international boundary line, with postoffice in the United States. Lands show highly argentiferous copper ore. Has 7 buildings.

#### **SOCORRO GOLD CO.**

Office and mine: Harrisburg, Yuma Co., Ariz. Geo. D. Workman, president; S. C. Workman, secretary; F. C. Smith, general manager. Organized 1901, under laws of Arizona, with capitalization \$500,000, shares \$1 par. Lands, 10 claims, area 200 acres, in the Ellsworth district, showing a 2' fissure carrying covellite and chalcopyrite, assaying about \$10 gold and 5 oz. silver per ton, with small copper values, developed by a 667' shaft and 11 tunnels, with 2,467' of underground workings, said to give 5,000 tons of ore blocked out for stoping. Has a 20-stamp mill, 3 Standard concentrators and cyanide plants of 10 tons and 50 tons daily capacity. Presumably idle.

#### **SOLACE COPPER MINING CO.**

Office and mine: Globe, Gila Co., Ariz. Ignatius Schlinger, president and treasurer; Henry Smith, vice-president; A. P. Murray, secretary; T. Schlinger, treasurer; Wm. Howe, superintendent. Organized 1903, under laws of Arizona, with capitalization \$500,000, shares \$1 par, in \$100,000 preferred and \$400,000 common shares. Lands, 4 claims, in the Bloody Tank district, circa 8 miles from Globe, showing 4 ore bodies, of 20" average width, opened by several pits, giving assays of 8% copper and \$15 gold per ton. Presumably idle.

**COMPAÑIA MINERA LA SOLEDAD.**

MEXICO.

Office: care of Dr. S. H. Quint, Ameca, Jalisco, Mex. Mine office: Guachinango, Mascota, Jalisco, Mex. Chris. D. O'Brien, Jr., manager. Lands, 78 pertenencias, circa 12 miles southwest of Ameca, in the Sierra Tetilla district, including the Soledad and Santa Isabel mines, carrying auriferous and argentiferous copper ore and free gold, with values mainly in gold, in a 12' vein, with deepest workings circa 400', showing sulphides below the 200' level, with 10,000 tons of ore estimated in sight. Equipment includes steam power and a stamp-mill having 10 stamps, 1 Wilfley table and 1 Pender concentrator.

**SOLMS-BRAUNSFELS'SCHE BERGWERKE.**

GERMANY.

Mine office: Braunsfels, Rheinprovinz, Germany. Herr Bergassessor Bellinger, manager. Has iron, manganese and copper ores.

**SOLOMON SPRINGS COPPER MINING CO.**

ARIZONA.

Office and mine: Naco, Cochise Co., Ariz. Lands, 20 claims, area 400 acres, in the Naco valley, about midway between Bisbee and Naco. Lands show a vein having a gossan of 4' to 40' width. Was under bond, circa 1903-1905, to Houghton Development Co. Idle several years.

**SONGATOF MINE.**

SIBERIA.

Mine office: Semipalatinsk, Siberia. Is a small producer, located in the province of Semipalatinsk, near the Chinese boundary line.

**SONOMA COPPER MINING CO.**

NEVADA.

Mine office: Rosebud, Humboldt Co., Nev. B. C. Williams, superintendent. Lands, circa 5 miles east of Rosebud, are opened by tunnel, showing ore giving good assay values in copper, gold and silver.

**SONOMA MINES OF MEXICO, LTD.**

MEXICO.

Office: 4 Great Winchester St., London, E. C., Eng. Mine office: Avino, San Juan del Rio, Durango, Mex. Geo. H. Johnson, secretary; W. B. Jeffrey, mine manager; E. L. Wagner, superintendent. Organized Nov. 4, 1899, under laws of Great Britain, with capitalization £500,000, shares £1 par; issued, £450,407. Lands, 415 acres, carrying ores of gold, silver and copper, the Sonoma claims showing a large body carrying 2.5 to 4% copper, with fair gold and silver values, while the Malinche claim is said to show ore carrying up to 10% copper, with small gold and silver values. Has steam power.

**COMPAÑIA MINERA DE LA SONORA.**

MEXICO.

Mine office: Cumpas, Moctezuma, Sonora, Mex. Property is the San José mine, carrying auriferous and argentiferous copper-lead ores. Has steam power.

**SONORA BONANZA MINING CO.**

MEXICO.

Dead. Reorganized, 1907, as Superior-Bonanza Mining Co. Formerly at Imuris, Magdalena, Sonora, Mex. Described Vol. VI.

**SONORA-CANANEA DEVELOPMENT CO.**

MEXICO.

Office: care of L. A. Burleigh, clerk, Augusta, Me. Letter returned unclaimed from former mine office, La Cananea, Arizpe, Sonora, Mex. Organized circa January, 1907, under laws of Maine, with capitalization \$5,000,000. Apparently still-born.

**SONORA CENTRAL MINES CO.**

MEXICO.

Office: 920 Merchants Loan & Trust Bldg., Chicago, Ills. Mine office: Alamos, Sonora, Mex. Employs circa 30 men. Frederick B. Smith, president; Amos C. Ballou, vice-president; W. R. Angell, secretary; Frederick E. Mills, treasurer; Jas. R. Hendra, general manager; preceding officers, Otto R. Barnett, Edw. B. Tolman, A. C. Waters, Van Ness D. Smith, Edmund J. James, Marquis E. Eaton, Lawrence D. Ballou, A. S. Service and Don S. Harvey, directors; Dr. Ernest A. Haggott, consulting engineer.

Organized July 18, 1907, under laws of Arizona, with capitalization \$10,000,000, shares \$10 par; fully issued. Continental Securities Co., fiscal

agent; Loan, Trust & Savings Bank, Chicago, transfer agent. Annual meeting, fourth Saturday in September.

The corporate relations of this company are somewhat indistinct, as the company ostensibly was a merger of the International Copper & Gold Co., Southern Sonora Development Co., and Santa Cruz Mining Co., but apparently the corporations named as merged remain in existence, and the Sonora Central Mines Co. apparently controls, through stock ownership, the International Copper & Gold Co., Southern Sonora Development Co. and Santa Cruz Mining Co., which in turn apparently control the Montana Copper & Gold Co., Santa Fé Copper & Gold Co., San Bernardo Copper Co., and Sombreretillo Mining Co., S. A. Inasmuch as the various corporations named are credited with the ownership of mining properties apparently claimed also by others of the number, it has been thought best to describe, under the title of Sonora Central Mines Co., the various properties claimed, either through stock ownership or through control of subsidiary corporations.

Lands are reported, by the company, as 271 claims, area 780 acres, held from the Mexican government, but 271 pertenencias, in Mexico, would have an area of 655 acres only. There also is a 10-acre millsite and 3,087 acres of agricultural lands in the Mayo Valley, where the company claims that 3 crops can be raised yearly. Lands, as reported by the company, are in the Altar and Alamos districts of Sonora, Mexico, but, in the company's advertisements, are reported as also occurring in Sinaloa, Mexico, and in Madison and Missoula counties, Montana. There are 20 different properties, of which 5 are said to carry copper, 1 lead, 6 silver and 8 gold.

Principal property is the Santo Domingo, near the Quintera and Zambona mines, showing ore bodies reported as fissure veins in granite and porphyry, and as contact deposits between granite and porphyry, apparently occurring as a vein of 30' width and 2,000' length, carrying chutes of payable ore of 6' to 18' width and 40' to 90' length. The Santo Domingo is said to have ore with a footwall paystreak assaying up to 220 oz. silver, from silver-copper glance, and is said to have 7' of mixed copper and silver ore, assaying 17 oz. silver per ton. Development is by a 360' shaft, with circa 2,500' of workings.

The Stone Creek mines, sometimes known as the Ballarat & Wallede group, area 120 acres, 18 miles from Dillon, Madison Co., Mont., have a 300' two-compartment shaft, with 1,370' of workings, and are said to have shipped some ore to Butte smelters returning 17% copper.

The Dolcoath mine, at Alamos, is said to show ore assaying 12% copper and circa 20 oz. silver per ton.

El Sombreretillo gold mine, area 112 hectares, is in the Altar district of Sonora.

La Australia group, 20 claims, in El Fuerte district of Sinaloa, is opened by a 70' shaft, with circa 400' of workings, showing a 12' paystreak of ore assaying 15% copper and 112 oz. silver per ton.

El Sorteo group, 20 claims, 7 miles from San Bernardo, Alamos, Sonora, has a 30' vein, opened by a 300' tunnel, showing ore assaying well in copper, silver and gold.

El Pedregal group, 15 hectares, 17 miles from Alamos, has a 200' shaft and a 1,760' tunnel.

La Negra group, 14 hectares, adjoining El Pedregal, has a 100' shaft, with circa 1,500' of workings, and is equipped with a 10-stamp mill.

La Perla group, 5 claims, near Quiriego, has a 100' shaft and a 250' tunnel.

The Zacatecas group, 10 hectares, near the Trigo gold mine, has 50' of workings, said to show gold ore.

The Santa Cruz group includes the Marte and Cuiche gold properties, in

the Altar district, the Santa Cruz having a 380' shaft and a 300' tunnel, and the Cuiche having a 60' shaft, the properties having circa 3,000' of workings, and a 10-stamp mill.

El Niño group, 10 claims, 8 miles east of El Pedregal and 30 miles south of San Bernardo, has 90' of workings, said to show silver-lead ore.

San Pablo group, 10 claims, in the Altar district, is said to be an antigua, with considerable workings.

La Higuera group, 8 claims, is said to show silver-lead ore.

La Josefita group, 14 claims, 30 miles east of Alamos, has 100' of workings, said to show copper ore.

Santa Ana group, 4 claims, has 50' of workings, said to show silver-lead ore.

La Ifiguera group, 8 hectares, is said to show a 16' paystreak in a 50' vein carrying mainly silver values.

El Quebradillo group, 4 claims, is said to show copper ore.

The Ruth group, in Missoula county, Montana, with 100' of workings, is said to show copper ore.

The company plans deepening the Santo Domingo mine and adding a 100-ton concentrator. The company has some excellent men in its directorate, but is not regarded favorably, because of the antecedents of the present corporation, and the difficulty experienced in determining which is which in the matter of properties held by the different interlocking companies. The ownership of 20 scattered properties must be regarded as a source of weakness rather than of strength.

#### **SONORA CHIEF MINING CO.**

**MEXICO.**

Office: 323 American Bank Bldg., Kansas City, Mo. Mine office: Suaqui de Batue, Ures, Sonora, Mex. L. H. Jansen, president and general manager; Dr. Moses T. Runnels, vice-president; Dr. C. L. V. Hedrick, secretary and superintendent; Harry Haldemann, assistant secretary and treasurer; preceding officers, A. H. Glasner and W. T. Cramer, directors; Morris Hesse, mine superintendent. Organized July 18, 1904, under laws of Arizona, and protocalized, October, 1905, under laws of Mexico, with capitalization \$1,500,000, shares \$1 par.

Lands, 11 claims, in 2 groups, known as the Phoenix and Lakeside, area 464 acres, 8 miles south of Suaqui de Batue, with country rocks of granite-porphry, diorite and limestone, showing several large, continuous ore bodies, of which 4 are of 5' to 6' average width, carrying ores said to give average assays of 15.8% copper, 10 to 80 oz. silver and \$25 to \$49 gold per ton. Company reports that 10% of production is auriferous and argentiferous whitneyite. Development is by shafts of 95' and 125', and by tunnels of 25', 75' and 248', with circa 4,000' of workings. Development is mainly at the Phoenix group. The Yaqui river has an available waterfall, estimated as capable of generating 440 h. p. Idle.

#### **SONORA CONSOLIDATED GOLD MINES CO., LTD.**

**MEXICO.**

Office: Quiriego, Alamos, Sonora, Mex. Capitalization \$3,000,000, shares \$5 par. Is controlled, through stock ownership, by Douglas Copper Co. Lands, circa 140 acres, known as the Trigo group of gold claims, said to include antigua having extensive workings.

#### **SONORA COPPER COMPANY OF MEXICO.**

**MEXICO.**

Dead. Assets, consisting of a lawsuit, sold to Puertecito Copper Co. Formerly at La Cananea, Arizpe, Sonora, Mex.

#### **SONORA COPPER SMELTING CO.**

**MEXICO.**

Office: 424 Scarritt Bldg., Kansas City, Mo. Mine office: Noria, Magdalena, Sonora, Mex. Employs circa 60 men. A. M. Conrad, president and superintendent; J. M. Lowe, vice-president; C. E. Kroh, secretary; W. R. Moore,

treasurer; preceding officers, R. S. Stone, F. E. Reed and E. E. Axline, directors. Organized June 25, 1908, under laws of Arizona, as successor of Sonora Copper Co., with capitalization \$3,000,000, shares \$10 par; issued, \$1,500,000. Annual meeting, third Tuesday in December.

Lands, circa 500 acres, with miscellaneous holdings of approximately 8,500 acres of valley land, on both sides of the railroad, including a townsite at Noria, between Llano and Puerto. Lands are in 5 groups, known as the Extension de la Washington, Cobre Grande, Creston de Cobre, Veta Grande and Wedge. Principal property, area 123 acres, shows limestone, diorite, porphyry, granite and quartzite, carrying various ore bodies, mainly with north and south strike, principal work being on the large ore body of the Extension de la Washington group, of 4' to 97' width, said to be traceable 3 miles on the company's lands, carrying cuprite, melaconite, azurite, malachite, chalcocite, chalcopyrite, chrysocolla, tetrahedrite and galena, giving assays of 2 to 40% copper, 5 to 25 oz. silver and \$2.50 to \$30 gold per ton. Development is by 7 shafts, of 53' to 260' depth, and by tunnels of 50', 200', 245', 250' and 1,150', with about 4,500' of workings, estimated to show 50,000 tons of ore. Upper workings are said to show veins of 25' and 40' width, carrying oxidized ores.

Equipment includes a steam plant and a 25-h. p. gasoline hoist, and the company has a store at the mine. Company plans continuous development, and eventually adding necessary mining and reduction equipments.

#### **SONORA DEVELOPMENT CO.**

**MEXICO.**

Dead. Lands sold, 1907, to Fay-Cananea Copper Co. Formerly at Moctezuma, Sonora, Mex. Described Vol. VI.

#### **SONORA & KANSAS CITY DEVELOPMENT CO.**

**MEXICO.**

Dead. Formerly at Suaqui de Batuc, Ures, Sonora, Mex.

#### **SONORA MINING CO.**

**MEXICO.**

Dead. Was succeeded, circa 1906, by Antigua Copper Co. Formerly at Aguacaliente de Baca, Fuerte, Sinaloa, Mex. Fully described Vol. VI.

#### **SONORA MINING & DEVELOPMENT CO.**

**MEXICO.**

Office: Spitzer Bldg., Toledo, Ohio. Mine office: San Antonio de la Huerta, Ures, Sonora, Mex. A. E. Klauser, president; A. V. Baumann, vice-president; H. B. Thompson, secretary; H. R. Klauser, treasurer; Herman Lockhart, Jr., general manager; H. C. Gerber, superintendent; preceding officers and C. A. Leeper, directors; Samuel James, consulting metallurgist. Organized 1901, with capitalization \$5,000,000, shares \$1 par; issued, \$1,500,000. International Trust Co., Boston, registrar; Frederick R. Tibbetts, Boston, Mass., transfer agent.

Lands, 154 hectares, also circa 1,000 acres miscellaneous lands, including a townsite, in the Hermosillo, Sahuaripa and Ures districts. Nearest railroad is the Cananea, Rio Yaqui y Pacifico, 30 miles distant, but direct rail connections are expected later.

Company has experienced considerable trouble from Yaqui Indian depredations, and also has met with some difficulties in working out metallurgical problems.

#### **SONORA MINING & MILLING CO.**

**MEXICO.**

Dead. Was succeeded, Feb. 15, 1906, by Juarez Mining Co. Formerly at Tubutama, Altar, Sonora, Mex. Described Vol. V.

#### **SONORA & SOUTHWESTERN MINES CO.**

**MEXICO.**

Office: care of Chas. W. Bolen, Clinton Bldg., Columbus, Ohio. Organized circa January, 1907, to develop properties in the Ures district of Sonora, Mexico.

#### **SONORENSE PROSPECTING & DEVELOPING CO.**

**MEXICO.**

Dead. Formerly at Ures, Sonora, Mex. Described Vol. VI.

#### **COMPANHIA MINEIRA DE SOTIEL-CORONADA.**

**SPAIN.**

Office: Bua dos Sapateiros 22, Lisbon, Portugal. Mine office: Calafnas, Portugal.

Huelva, Spain. Senhor Dom Agusto Fuschini, chairman; Thos. Morrison & Co., agents. Lands, 666 hectares, including 34 old mines, carrying cupriferous pyrite. Works steadily, in a rather small way, producing cupriferous pyrite and cement copper equivalent to an average annual production of 1,000,000 lbs. fine copper.

**SOCIEDAD ANONIMA MINAS DE SOTO.**

SPAIN.

Office: Bilbao, Spain. Mine office: Reinosa, Santander, Spain. Lands, under perpetual lease to Enrique G. W. Romer, with option of purchase, are described under title Minas de Soto.

**MINAS DE SOTO.**

SPAIN.

Office: 32 Muelle, Santander, Spain. Mine office: Reinosa, Santander, Spain. Lands, owned by Sociedad Anonima Minas de Soto, are held, on perpetual lease, with option of purchase, by Enrique G. W. Romer. Property, which is the most important copper mine in the north of Spain, shows veins carrying high grade chalcopyrite, and about 250 tons of 28% ore were shipped, latter half of 1906 and first half of 1907. Has steam power and a small mill. Production, 1907, estimated at 125,000 lbs. fine copper.

**SOUTH AFRICAN COPPER ESTATES, LTD.**

CAPE COLONY.

Dead. Dissolved, September, 1904. Formerly in Little Namaqualand, Cape Colony.

**SOUTH AFRICAN GOLD & COPPER SYNDICATE, LTD.**

TRANSVAAL.

Office: 237 Finsbury Pavement House, London, E. C., Eng. Mine office: Pietersburg, Zoutpansberg, Transvaal. E. G. Knights, chairman; E. C. C. Smith, secretary. Organized Nov. 24, 1903, under laws of Great Britain, with capitalization £15,000, shares £1 par, in £10,000 preferred and £5,000 ordinary shares. Lands, 11,300 acres, held under option, southeast of Pietersburg. It is stated that gold and copper ores have been found.

**SOUTH AMERICAN COPPER SYNDICATE, LTD.**

Office: 2 Broad Street Place, London, E. C., Eng. E. Edwards, chairman; Chas. D. Comrie, secretary. Organized March 27, 1907, under laws of Great Britain, with capitalization £7,500, shares £1 par. Was organized with object of acquiring and working copper mines in South America. Location of lands, if any, unknown.

**SOUTH AMERICAN DEVELOPMENT CO.**

PERÚ.

Dead. Was succeeded, circa 1903, by Cerro de Pasco Mining Co. Formerly at Cerro de Pasco, Junín, Perú.

**SOUTH AUSTRALIAN COPPER SYNDICATE, LTD.**

AUSTRALIA.

Dead. Never did any business.

**SOUTH BEE SYNDICATE.**

AUSTRALIA.

Mine office: Cobar, Robinson Co., N. S. W., Australia. Organized 1906, under laws of New South Wales, with capitalization £25,000, shares 5s. par. Lands, lying south of the Queen Bee Mine, have a shallow shaft, showing copper stains.

**SOUTH BISBEE COPPER MINING & TOWNSITE**

ARIZONA.

**IMPROVEMENT CO.**

Dead. Wound up, 1904. Lands sold to Lake Superior & Pittsburg Mining Co. Formerly at Bisbee, Cochise Co., Ariz. Described Vol. II.

**SOUTH BLUESTONE MINE.**

NEVADA.

Mine office: Yerington, Lyon Co., Nev. Is said to have a good surface showing of ore.

**SOUTH BUTTE COPPER MINING CO.**

MONTANA.

Office: 51 East Broadway, Butte. Silver Bow Co., Mont. Mine office: Corbin, Jefferson Co., Mont. Jas. Davidson, president and general manager; Geo. B. Conway, vice-president; Frank E. Whitehead, secretary; J. W. Kemper,

treasurer; preceding officers and R. E. Tait, directors; Hugo Freyler, superintendent. Organized Jan. 24, 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par; issued, \$860,000. Annual meeting, first Wednesday in April.

Lands, 8 claims, freehold, area 151 acres, in the Summit Valley district, 2 miles south of Butte, opened by the 326' Virginia shaft. Company also holds, under bond and lease, the Daphne group of 5 claims, adjoining the Boston & Corbin mine, in Jefferson county, having a 175' shaft and a 460' tunnel, said to show a 12' vein carrying native copper and some ore assaying up to 14% copper, 11 oz. silver and \$2 gold per ton. Equipment includes a 75-h. p. hoist and 2-drill air-compressor, with several small mine buildings. The Daphne group is held under a bond for \$83,000, due Nov. 2, 1909, with lease on 15% royalty, payments to be applied on the bond.

#### SOUTH BUTTE MINING CO.

MONTANA.

Mine office: Butte, Silver Bow Co., Mont. John G. Williams, M. E. Riley and Arthur Howell, directors. Organized May 25, 1906, under laws of Minnesota, with capitalization \$500,000, shares \$100 par. Was organized by the Great Northern Railway interests, and is controlled by the Lewisohns. Has been in litigation with numerous individuals and companies, including the East Butte, in efforts to quiet title to a narrow strip of the Great Northern right-of-way, to which the mineral rights are claimed by the East Butte and North Butte.

#### SOUTH BUTTE ZONE MINING CO.

MONTANA.

Letter returned unclaimed from former mine office, Butte, Silver Bow Co., Mont. C. F. Floyd, John Redlich, Albert Cully, Geo. E. Seiple and Edward Power, directors. Organized, early 1907, with capitalization \$1,000,000, shares \$1 par. Never operative and apparently moribund.

#### SOUTH CANANEA COPPER MINING CO., S. A.

MEXICO.

Is the Mexican incorporation of the Pennsylvania & Cananea Copper Co.

#### SOUTH CANNINDAH SYNDICATE, LTD.

AUSTRALIA.

Mine office: Mount Cannindah, Queensland, Australia. Lands, 1 to 2 miles south of the Mount Cannindah mine, are supposed to carry circa one-third mile of the extension of the Apple Tree ore body. Mine has a 75' underlay shaft, showing a vein of 7' to 8' width, and management plans sinking 2 additional underlay shafts. Shipments, December, 1906, to April, 1907, of about 25 tons of hand selected ore, gave average returns of circa 9.7% copper, 1.4 oz. silver and 2 dwts. gold per long ton. Idle.

#### SOUTH CATTLIN MINE.

AUSTRALIA.

Mine office: Ravensthorpe, Phillips River gold field, Western Australia. Lands, south of the Mt. Cattlin, show a 30' vein.

#### SOUTH COLUMBUS MINING CO.

UTAH.

Office: Salt Lake City, Utah. Mine office: Alta, Salt Lake Co., Utah. Anthony O. Jacobson, president and manager; Walter L. Maas, secretary and treasurer; preceding officers, Val. S. Snow, S. A. Whitney and Wm. M. Bradley, directors. Organized Feb. 11, 1904, with capitalization \$3,000,000, shares \$1 par, as successor of Centennial-Bingham Mining Co., and increased capitalization, circa September, 1908, to \$500,000, shares \$1 par, to provide capital for acquiring the Columbus-Wedge. In October, 1908, sold 70,000 shares of treasury stock, for \$35,000 cash, leaving 30,000 shares unissued, and gave 115,000 shares of new stock to the Columbus-Wedge Mining Co., in exchange for property of latter.

Lands include the Wedge group, showing good silver-lead values, and the Alta-Quincy group, opposite the Columbus Consolidated, having a tunnel cutting a 25' fissure vein having a hanging-wall paystreak assaying up to 11%

copper, 10 oz. silver and \$2.80 gold per ton. In November, 1908, on the 600' level, a crosscut showed ore assaying 10% copper, 5.5% lead and 25 oz. silver per ton.

Company formerly held a property, circa 4 miles from Park City, area 6 acres, having a 1,050' tunnel, showing mainly silver-lead values, with some ore of 3.5 to 45% copper tenor, from which small shipments were made, 1907, but apparently this property is idle, or has been forfeited.

#### SOUTHERN ARIZONA SMELTING CO.

#### ARIZONA.

Office: 11 Pine St., New York, N. Y. Operating office: Tombstone, Ariz. Works office: Silver Bell, Pima Co., Ariz. Employs circa 125 men. E. B. Gage, president; W. F. Staunton, vice-president and general manager; A. N. Gage, secretary and treasurer; preceding officers, Selwyn Eddy, V. L. Mason, F. M. Murphy and H. M. Robinson, directors; A. S. Donan, superintendent. Organized Aug. 10, 1906, under laws of Arizona, with capitalization \$1,500,000, shares \$100 par. Is controlled, through ownership of entire stock issue, by Imperial Copper Co. Works represent an investment of circa \$500,000.

Lands, 8 miles south of Red Rock and 12 miles from the Imperial mine, with a down grade haul, include the 110-acre townsite of Sasco, with 400 lots, each 50x150'.

The reduction plant, known as the Sasco smelter, includes a sampling mill, blast-furnace building, converter building, power-house, boiler-house, machine-shop and smithy, all of steel frames, also dwelling houses, a store, office and miscellaneous buildings. All of the principal buildings are planned so that they can be extended in two directions, providing an almost unlimited capacity for expansion. The smelter, blown in Feb. 1, 1908, does a general custom business, but treats mainly ore of the Imperial mine, and is of 300 tons nominal daily capacity.

The sampling mill is small, but fully equipped. Ore is received from the mines in 50-ton steel-bottom dump cars, discharging into 4,000-ton storage bins.

The cupola building is constructed for 2 blast-furnaces, with one furnace installed, this, rated at 300 tons, giving an actual duty up to 400 tons daily. Charging is by cars hauled by electric locomotives, on tracks of 36" gauge. Settler is elliptical, slags, which are of low copper tenor, skimming into 10-ton slag-trucks, hauled by steam locomotives on a standard-gauge track. The dust chamber is 100x350', leading to a 175' stack of 12' diameter.

The converter department has a 50-ton electric traveling crane, of 45' span. There are 6 shells, 84x126" in size, rotated hydraulically, and hoods from the converter stands lead to an independent dust-chamber and stack. Product is blister copper, averaging 99.3% copper, with small quantities of silver and gold.

The power plant has an electric traveling crane and a 650-kw. electric power plant with 440-volt induction motors. There are 2 Nordberg Corliss condensing engines, direct-connected to a No. 9 Connerville blower and a Nordberg cross-compound Corliss condensing air-compressor with 15" and 30" steam cylinders, with two 36" air cylinders and 42" stroke. The boiler-house has 4 Morrison marine boilers. Water is secured from wells in the Santa Cruz valley, by an 8" pipe-line.

#### SOUTHERN COPPER CO.

Organized Feb. 22, 1905, under laws of Maine. Location of lands, if any, unknown.

#### SOUTHERN COPPER CO.

#### NORTH CAROLINA.

Mine office: Gold Hill, Rowan Co., N. C. A. M. A. Richardson, president; Otto Germer, vice-president; W. M. Richardson, secretary; Walter George

Newman, manager. Organized circa May, 1906, with capitalization \$3,000,000. Presumably idle.

**SOUTHERN COPPER MINING CO.**

UTAH.

Office: care of J. M. Reynolds, secretary, treasurer and general manager, Salt Lake City, Utah. Mine office: Milford, Beaver Co., Utah. J. K. Persons, president; B. J. Persons, vice-president; Ed. Mills, superintendent. Organized, May, 1905, under laws of Utah, with capitalization \$300,000, shares \$1 par. Lands, 5 claims, area 100 acres, surveyed for patents, known as the Brooklyn group, 12 miles north of Milford, adjoining the Wahsatch King. Development is by a 60' shaft and 200' tunnel, latter cutting a vein carrying fair values in copper, silver and gold. Presumably idle.

**SOUTHERN CROSS COPPER MINE CO., LTD.**

BRITISH COLUMBIA.

Office: 8 Broad Street Ave., London, E. C., Eng. Mine office: Alberni, Vancouver Island, B. C. T. D. Conway, chairman and managing director; Arthur Hebden, secretary. Organized March 5, 1906, under laws of British Columbia, with capitalization \$750,000, shares \$5 par.

Lands, 5 claims, area 250 acres, crown-granted, with an option over 500 acres adjoining, on the northern side of Uchucklesit Harbor, showing a vein of 12' to 20' width, with estimated average of 15', traceable for some distance, developed by an opencut and a 370' tunnel, showing chalcopyrite assaying up to 18% copper and \$11 gold per ton. Is said to plan a smelter. Shipped, 1906, circa 100 tons of ore.

**SOUTHERN NEVADA GOLD & COPPER MINING CO.**

NEVADA.

Letter returned unclaimed from former mine office, Luning, Esmeralda Co., Nev. I. H. Hood, secretary. Organized under laws of South Dakota, with capitalization \$1,000,000, shares \$1 par. Lands, 2 claims, area 40 acres, 3 miles southeast of Luning, said to be in litigation.

**SOUTHERN PACIFIC GOLD & COPPER MINING & MILLING CO. UTAH.**

Office: 213 West Fifth St., Salt Lake City, Utah. Mine office: Ogden, Weber Co., Utah. Employs 5 men. T. S. Freeney, president; Wm. Pow, vice-president; J. W. Burnham, treasurer and general manager. Organized July 20, 1903, under laws of Utah, with capitalization \$1,000,000, shares \$1 par; issued, \$773,910.

Lands, 12 claims, unpatented, area 240 acres, in the Sierra Nevada district, circa 8 miles north of Ogden, carrying circa 25 ore bodies, mainly as contact deposits between quartzite and gneiss, of which 3, under development, of 3' to 200' estimated average width, show some oxidized ores, but mainly sulphides, including covellite, bornite and chalcopyrite, developed by 8 tunnels, longest 330', with circa 700' of workings, with considerable ore in sight, giving average assays of 3.5% copper and circa 3 oz. silver per ton, with occasional high gold values. Company plans continuous development.

**SOUTHERN SMELTING & REFINING CO.**

TEXAS.

Dead. Abortive. Formerly at El Paso, El Paso Co., Tex. Described Vol. VI.

**SOUTHERN SONORA DEVELOPMENT CO.**

MEXICO.

Office: 135 Adams St., Chicago, Ills. Mine office: Alamos, Sonora, Mex. Frederick E. Mills, president; Lucius W. Winehester, vice-president; Lawrence D. Ballou, secretary; Amos P. Ballou, treasurer and general manager; preceding officers, F. B. Smith and John W. Elliott, directors; J. R. Hendra, superintendent. Organized July 1, 1904, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, 28 pertenencias, area 69 acres, held under name of San Bernardo Mining Co., showing granite and diorite carrying various fissure veins, of which the Santo Domingo vein, of 14' average width, is traceable 3,200', and the Quebradilla vein, estimated at 15' average width, and the Santa Ana at 8' average width. Development is by a 300' shaft, with 360' of workings, esti-

mated to show 15,000 tons of carbonate ore, assaying 2% copper, 5% lead, 67 oz. silver and \$42 gold per ton, which seems too high. Equipment includes an 80-h. p. hoist, good for 1,500', a store, assay office and mill, latter not in use.

**SOUTHERN STAR COPPER & SMELTING CO.**

Dead. Formerly had an office in St. James Bldg., New York, N. Y.  
**SOUTHERN ZINC & COPPER MINING CO.** ARKANSAS.

Dead. Formerly at Gillham, Sevier Co., Ark. Described Vol. VI.  
**SOUTH FURNACE CREEK COPPER CO.** CALIFORNIA.

Office: Union Trust Bldg., Los Angeles, Cal. Mine office: Greenwater, Inyo Co., Cal. A. T. Woods, treasurer; L. R. Myers, secretary; preceding officers, C. J. Fox and J. G. Lawrence, directors. Lands, 9 claims, 14 miles south of Greenwater, on the eastern slope of the Funeral Range, said to have a 100' shaft on a 5' vein, showing ore assaying 25% copper and 10' to 12 oz. silver per ton. Idle.

**SOUTH GLOBE DEVELOPMENT CO.** ARIZONA.

Dead. Lands were 12 claims, 6 miles south of Globe, having a shallow shaft showing auriferous sulphide copper ore of fair tenor. Formerly at Globe, Gila Co., Ariz.

**SOUTH GREENWATER COPPER CO.** CALIFORNIA.

Office: Tonopah, Nev. Mine office: Greenwater, Inyo Co., Cal. John S. Hills, president and general manager; Malcolm Smith, vice-president; R. C. Moore, secretary and treasurer; preceding officers, Hon. T. L. Oddie and Roger C. Knox, directors; H. S. Chapman, superintendent. Organized November, 1906, under laws of Nevada, with capitalization \$1,500,000, shares \$1 par.

Lands, 14 claims, 1 fractional, area circa 275 acres, known as the Miller group, at Miller Springs, 15 miles south of Greenwater, having 3 shallow shafts showing 2 veins, 1 carrying a promising outcrop of about 40' width, and 1 of about 6' average width carrying ore giving good assay values in copper. Property is above the average of promise in the Greenwater district. Idle.

**SOUTH KEARSARGE MINE.** MICHIGAN.

Owned by Osceola Consolidated Mining Co.  
**SOUTH MOUNT LYELL MINING CO., LTD.** TASMANIA.

Dead. Formerly at Gormanston, Montagu Co., Tasmania. Described Vol. VI.  
**SOUTH NAMAQUA SYNDICATE.** CAPE COLONY.

Dead. Was merged, circa March, 1908, in Insizwa Nickel & Copper Developing Co., Ltd. Formerly at Kokstad, Cape Colony.

**SOUTH NEVADA COPPER SYNDICATE.** NEVADA.

Letter returned unclaimed from former office and mine, Goldfield, Nev. Walter Stone, president; Frank B. Hobbs, secretary and treasurer; Wm. Prior, general manager. Organized 1906, under laws of South Dakota, with capitalization \$2,000,000, shares \$1 par. Lands, 5 claims, area 100 acres, known as the Santa Ana group, in the Slate Range, circa 14 miles south of Goldfield, having a 30' shaft, showing a 30' vein, surface ores of which assay 9 to 10% copper, 8 oz. silver and \$10 gold per ton. Presumably idle.

**SOUTH PACKER MINE.** IDAHO.

Mine office: Ivers, Custer Co., Idaho. Has lands near the Lost Packer.

**SOUTH PEACOCK MINING CO.** IDAHO.

Office: 88 State St., Boston, Mass. Letter returned unclaimed from former mine office, Weiser, Washington Co., Idaho. Thos. S. Wentworth, president; Wm. L. Pratt, secretary. Capitalization, \$500,000. Has a shaft showing cuprite. Idle some years.

**SOUTH RANGE MINING CO.** MICHIGAN.

Office: 60 State St., Boston, Mass. Mine office: Houghton, Houghton Co., Mich. John W. Belches, president; H. W. Wesson, treasurer; F. W.

Nichols, secretary. Capitalization \$2,500,000, shares \$25 par. Lands, circa 7,000 acres, undeveloped, lying mainly between the Globe and Belt properties, in Houghton and Ontonagon counties, Michigan, and so located that future mining companies, carved out of new territory in this district, will have to see the South Range company, or organize with very jagged outlines, in many cases.

**SOUTH SAN XAVIER COPPER CO.****ARIZONA.**

Office and mine: Tucson, Pima Co., Ariz. Lands show a contact deposit between limestone and porphyry, with a good gossan, of 30' estimated width, carrying a 30" paystreak of sulphide ore assaying up to 28% copper and 12 oz. silver per ton, opened by a two-compartment shaft of circa 200' depth. Smelter shipments have returned 13.5 to 20% copper, with small silver values.

**SOUTH SIDE MINING CO.****MICHIGAN.**

Office: 68 Devonshire St., Boston, Mass. Mine office: Leopold Bldg., Houghton, Houghton Co., Mich. John C. Watson, president; Fred W. Nichols, agent; C. O. Burbank, secretary and treasurer. Reorganized April, 1899, under laws of Michigan, as successor of company of same name, which levied assessments of about \$90,000 to 1872. Annual meeting, first Monday in March. Lands, circa 200 acres, lying west of the Dakota and north of the Naumkeag, immediately west of Houghton, with one-half mile frontage on Portage Lake. Mining operations were confined to exploratory work many years ago. Idle since circa 1873.

**SOUTH SWANSEA MINING CO.****UTAH.**

Office: 431 Atlas Blk., Salt Lake City, Utah. Mine office: Silver City, Juab Co., Utah. Claude V. Wheeler, president; J. M. Wheeler, vice-president; J. C. Croxall, treasurer; W. H. Farnsworth, secretary; Jesse Knight, general manager. Organized May 11, 1908, under laws of Utah, with capitalization \$300,000, shares \$1 par. Has paid dividends of \$169,460, last dividend being disbursed April, 1904. Ore carries mainly silver values, with some copper and gold. Production, 1907, was only 3 carloads of ore.

**SOUTH THAESIS MINING CO., N. L.****TASMANIA.**

Dead. Property was sold, for £45,000, to Mount Lyell Mining & Railway Co., Ltd. Formerly at North Mount Lyell, Montagu Co., Tasmania.

**SOUTHWEST AFRICA CO., LTD.****GERMAN SOUTHWEST AFRICA.**

Offices: 3 Laurence Pountney Hill, Cannon St., London, E. C., Eng., and Unter den Linden 35, Berlin, Germany. E. Davis, chairman; C. Launspach, secretary; Tob. Tönnesen, African manager. Organized Aug. 18, 1892, with capitalization £2,000,000, shares £1 par; issued, £1,200,000. Property is mineral concessions covering 22,000 square miles, including nearly 4,500 square miles of freehold, in Damaraland, and mining rights to 23,000 square miles in Ovamboland, total holdings including 40,000 square miles of freehold, with mining rights over 90,000 square miles additional, also sundry railroad concessions. Holds large share interests in the Otavi Mines & Railway Co.

**SOUTHWESTERN CONSOLIDATED SMELTING CO.****CALIFORNIA.**

Office: 39 Cortlandt St., New York, N. Y. F. C. Kaye, president; J. C. De Wolfe, treasurer; I. L. Thompson, secretary; E. Homer Grasty, manager. Organized August, 1904, with capitalization \$2,000,000, shares \$1 par. Company claimed to plan building a smelter somewhere in California. Was merely a stock-jobbing device, promoted by Messrs. Kaye, De Wolfe & Co., whose "mining" operations merely lead to the depletion of the pockets of their "customers."

**SOUTHWESTERN COPPER CO.****NEW MEXICO.**

Dead. Lands sold, circa May, 1906, to Burro Mountain Copper Co. Formerly at Silver City, Grant Co., N. M.

**SOUTHWESTERN COPPER CO.****TEXAS.**

Letter returned unclaimed from former mine office, Sierra Blanca, El Paso

Digitized by Google

Co., Tex. F. W. Thomme, president. Lands, 1 mile from Sierra Blanca, have a 200' shaft, showing a 6' vein, carrying ore assaying up to 18% copper. Has steam power. Idle.

**SOUTHWESTERN COPPER & IRON CO.** NEW MEXICO.

Dead. Lands sold, May, 1906, to Burro Mountain Copper Co. Formerly at Leopold, Grant Co., N. M.

**SOUTHWESTERN DEVELOPMENT & IMPROVEMENT CO.** ARIZONA.

Mine office: Clifton, Graham Co., Ariz. Property is the Polaris mine, held under bond and lease, from Polaris Mining & Milling Co. Property is described under title of owner.

**SOUTHWESTERN GOLD & COPPER CO.** ARIZONA.

Dead. Formerly at Douglas, Cochise Co., Ariz.

**SOUTHWESTERN MINE & SMELTING CO.** ARIZONA.

Dead. Formerly at Gleeson, Cochise Co., Ariz.

**SOUTHWESTERN MINING CO.** MEXICO.

Dead. Was merged, circa August, 1908, in Kansas-Cananea Copper Co. Formerly at La Cananea, Arizpe, Sonora, Mex. Fully described Vol. VI.

**SOUTHWESTERN SMELTING CO.** CALIFORNIA.

Dead. Formerly at Letcher, San Bernardino Co., Cal.

**SOUTHWESTERN SMELTING & REFINING CO.** ARIZONA.

Dead. Sold, Sept. 15, 1906, by sheriff, under execution, to Walter L. Wilie. Formerly at Benson, Cochise Co., Ariz. Described Vol. VI.

**SOUTH WEST SMELTING & REFINING CO.** NEW MEXICO.

Office: 517 Francis St., St. Joseph, Mo. Mine and works office: Orogrande, Otero Co., N. M. Geo. J. Green, president; Geo. A. Guild, vice-president; T. G. Travis, secretary and treasurer; Daniel B. Hunt, assistant secretary; Wm. A. Evans, assistant treasurer; preceding officers, Mansfield M. Riggs, Archibald M. Woodson, John E. Lonsdale, Chas. B. Hughes, Clinton P. Cockrill, Jos. P. Standley and Ichabod McCord, directors; J. J. Murray, general manager; J. S. Airheart, superintendent.

Organized Dec. 5, 1904, under laws of New Mexico, with capitalization \$750,000, increased, circa April, 1907, to \$1,250,000, shares \$100 par. Bonds, \$150,000, at 5%. Controls, through stock ownership, New Mexican Land & Development Co., which owns the townsite of Orogrande, and is said to control a number of other allied and subsidiary corporations. Annual meeting, third Tuesday in November.

Lands, 36 claims, area 720 acres, also an 80-acre smeltersite and a 640-acre townsite, giving total holdings of 1,440 acres, bought of the Jarilla Mining Co., in the Silver Hill district of Otero county and the Organ district of Dona Ana county, New Mexico. Principal holdings are in the Silver Hill district, in the Jarilla Mountains, circa 60 miles north of El Paso, and, in addition to copper lands, the company holds sundry placer gold claims and a mine of auriferous iron ore, highly suitable for fluxing. The company also owns a limestone quarry for flux, which has been stated in the press to carry 80 cents to \$6 gold per ton, which seems too good to be true.

Principal mining properties are the Lucky, Nanny Baird, Iron Mask and Garnet mines. The three properties first named show limestone and porphyry, carrying 16 contact deposits, of which 7, more or less developed, range from 3' to 40' in width, with known length of 100' to 700', carrying native copper, cuprite and malachite, said to give average assays of 7% copper, 2 oz. silver and \$5 gold per ton, all ores being slightly argentiferous and strongly auriferous.

The Lucky mine, developed by a 300' shaft, and by tunnels of 250' and 625', is said to show a large amount of auriferous copper ore averaging circa 7% copper and \$6 gold per ton, and the mine has proven very wet. A 500' tramway from the mine leads to the railway track.

The Nanny Baird mine has a vein of circa 25' average width, carrying small copper and silver values, with good gold values, and to the south is a placer gold tract, of some promise. Development is by a 100' vertical shaft and an 800' incline shaft. The Lucky and Nanny Baird mines jointly have about one mile of workings, estimated by company to show 100,000 tons of ore of good average grade blocked out for stoping, which figures probably are too high.

The Iron Mask mine, on Iron Mountain, produces auriferous iron ore, assaying circa 60% iron and \$2 to \$8 gold per ton, with an estimated average gold value of \$3 to \$4. It is planned to reach the Iron Mask by a railroad spur.

The Garnet mine, taken over early 1908, has a 480' shaft, equipment including a 20-h. p. gasoline engine and an air-compressor.

The mining plant includes three 85-h. p. boilers, two 8x10" hoists, good for 800' each, and 2 Sullivan air-compressors, of 28 drills aggregate capacity, with 23 power drills.

Buildings are 22 in number, including 4 smithies, a 20x40' machine-shop, general store, office, assay office and laboratory. The townsite of Orogrande has electric light and a telephone exchange, maintained by the company.

Water is brought, 21 miles, from a dam across the Sacramento river, in the Sacramento Mountains, by a 6" pipe-line, leading to a 25,000,000-gallon reservoir, on the side of Baird Hill, just above the townsite of Orogrande. The daily flow of the river is said to be 10,000,000 gallons, and the capacity of the pipe-line is circa 500,000 gallons daily, delivering water at about 800 lbs. pressure per square inch, under a static head of 1,500'.

The smeltersite, less than a mile from Jarilla Junction, is about 1½ miles from the mine, and includes ore-bins, sampling mill, furnace building and power-house. The furnace building, of steel, is designed for two 250-ton furnaces, with equipment in place for both, but only one furnace is installed, this having been blown in early November, 1907. The furnace building has a 125' steel smokestack, of 14' diameter at the base and 9' at the top. The smelter is reached by a private spur track from the El Paso & Northeastern Railroad, and is connected by a branch line with the mines.

The smelter power plant has three 150-h. p. Heine boilers, two 120-h. p. Filer & Stowell Corliss high-speed engines, 2 Hendrie & Bolthoff electric generators and two No. 8 Connersville blowers.

The company formerly employed about 200 men, and made its first matte shipment to Chrome, N. J., in July, 1907, but suspended operations May, 1908, when Geo. J. Green, the president, was appointed receiver, in a friendly action. The plant was idle at the end of 1908.

#### SOUTH YALE COPPER CO., LTD.

#### BRITISH COLUMBIA.

Mine office: Grand Forks, Boundary district, B. C. Frederick Keffer, manager. Organized January, 1905, under laws of British Columbia, with capitalization \$450,000, shares \$1 par. Apparently property was a bond and lease on the Sunset group.

#### SOUTH YUBA MINING & SMELTING CO.

#### CALIFORNIA.

Mine office: French Corral, Nevada Co., Cal. Presumably idle.

#### SOVEREIGN CONSOLIDATED COPPER CO.

#### OREGON.

Office: Baker City, Ore. Mine office: Sparta, Baker Co., Ore. W. G. Gladding, president; John Arthur, vice-president; Kenneth O. McEwen, secretary; J. W. Patterson, treasurer; preceding officers and John Ramb, directors. Organized Dec. 5, 1907, under laws of Oregon, with capitalization \$2,000,000. Lands, 12 claims, area circa 200 acres, on Coin Creek, in the foothills of the Eagle Mountains, showing a mineralized zone of about 200' width, traceable 6,000' on the company's lands.

**SOVEREIGN COPPER MINING CO.**

WYOMING.

Dead. Formerly at Battle, Carbon Co., Wyo.

**SPANISH-AMERICAN FEDERAL SMELTING & REFINING CO. ARIZONA.**

Office: 11 Buckler Bldg., El Paso, Tex. Mine office: Nogales, Santa Cruz Co., Ariz. J. V. Smith, president; F. A. Schneider, general manager; J. P. Stapleton, attorney. Organized circa January, 1908. Property apparently is the idea of building a 1,200-ton smelter at Nogales, and company apparently is a replica of the Pan-American Smelting & Refining Co., and is not regarded favorably.

**SPANISH COPPER CO., LTD.**

SPAIN.

Office: 2 Tokenhouse Bldgs., London, E. C., Eng. Mine office: San Vicente, via Paimogo, Huelva, Spain. G. B. Mee, chairman; Miguel Yglesias, managing director. Organized June 8, 1883, with capitalization £150,000, shares £10 par; issued £110,000.

Lands, 16 claims, area upwards of 400 acres, 6 claims, area 200 acres, perpetual leasehold, being held on an annual rental of £400, also 23 acres miscellaneous lands, in the Paimogo district of Huelva, showing 6 contact veins between porphyry and clay-slate, of which 3 are developed, these averaging 30' width and 500' length, opened by numerous shafts of 30' to 165' depth, and 14 tunnels, longest 1,840', estimated to show 2,500,000 tons of ore, with 100,000 tons blocked out for stoping. Ore is mainly cupriferous pyrite, claimed to average about 4% copper, 3 oz. silver and \$2 gold per ton. Mines, first opened by the Phoenicians, were reopened 1862, and again in 1872, 1883, 1901 and 1905. The Guadiana railroad is 5 miles distant.

**SPANISH MINERALS DEVELOPMENT, LTD.**

SPAIN.

Dead. Was succeeded, Feb. 14, 1908, by Esperanza Copper & Silver Co., Ltd. Formerly at Almonaster, Huelva, Spain. Described Vol. VI.

**SPAR COPPER MINES & TUNNEL CO.**

COLORADO.

Office: care of F. N. Stiles, president and general manager, Denver, Colo. E. A. Stiles, secretary; F. W. Downs, treasurer. Organized June 17, 1904, under laws of Colorado, with capitalization \$600,000, shares \$1 par. Lands, 9 claims, on Contact Mountain, Tomichi district, Gunnison county, Colorado, formerly known as the Morning Glim, having circa 1,500' of workings, with gasoline power and 3 mine buildings. Is said to have produced upwards of \$75,000 worth of ore, in the past. Presumably idle.

**SPAR GOLD & COPPER CO.**

ARIZONA.

Dead. Lands sold, circa 1908, to Pocahontas Copper Queen Mining Co. Formerly at Mayer, Yavapai Co., Ariz.

**SPARTA MINING & DEVELOPMENT CO.**

OREGON.

Office: care of Chas. P. Caffrey, Logansport, Ind. Mine office: Sparta, Baker Co., Ore. Lands, 15 claims, including the Blue Boulder group, 3 miles south of Sparta, having a vein of about 100' width, opened by a 75' tunnel and several pits of 10' to 20' depth, showing auriferous copper ore.

**SPASSKY COPPER MINE, LTD.**

SIBERIA.

Office: 60 London Wall, London, E. C., Eng. Mine office: Spassky Zavod, Akmolinsk, Siberia. Arthur Fell, M. P., chairman; Ernest Carnot, vice-chairman; John A. Clark, secretary; Herbert C. Wolmer, general manager; R. E. V. Vinicombe, mine superintendent; R. McLeod Percy, colliery superintendent; F. C. Knight, smelter superintendent; Pellew, Harvey & Fell, consulting engineers.

Organized July 9, 1904, under laws of Great Britain, with capitalization £300,000, shares £1 par, fully issued. Debentures, £300,000, at 6%, retiring former first-mortgage debenture issue of £100,000 at 5%, and a £30,000 second-mortgage issue at 6%. Company authorized, March, 1908, an increase of

capitalization to £500,000, to provide for the conversion of the new issue of £300,000 debentures into shares, at £3 per share, until Jan. 1, 1912.

Lands, 100 square miles, on the Ishim river, an affluent of the Irtish, in the Kirghiz Steppe, circa 250 miles south of Petropavlovsk, on the Siberian railway, which is the nearest railroad point. Property includes about 25 square miles of coal lands, carrying 4 seams of bituminous coal, said to be of excellent grade. Lands of the company also carry gold, iron and limestone, and include the Yusupenski mine and the Spassky smelter.

The Yusupenski mine was opened 1864, closed 1884, reopened 1896 and bought by present company, 1904. Original development was by an open pit, once 150' deep, but long since caved in.

The Yusupenski shows a network of veins, at and near the contact of slate and arcose, in sedimentaries of Permian age. The 2 main veins, known as the Annensky and Vladimir, are circa 200' distant and substantially parallel, hence it is thought they may join at depth. The mine has been tested by diamond drill borings, to a depth of 475', ore in bottom of holes assaying up to 67% copper. Principal development is on the Annensky vein, which is 10' to 60' in width, carrying mainly chalcocite and bornite, with small quantities of chalcopyrite and occasional tetrahedrite, with gangue of quartz and barite, estimated by company to average 12 to 20% in copper tenor. The upper workings show some native copper, cuprite, azurite and malachite.

The mine has 35 old shafts, mainly shallow and in extremely bad condition, the mining practice of the former owners having been of the most primitive nature, timbering costs averaging \$1.25 per ton of ore mined, and timber being subject to frequent crushes, owing to bad mining, after which new timbers were installed inside of the old, with the result of eventually reducing the mine openings to impassable dimensions. New development, by present company, includes 6 shafts, of 350', 375', 300', 150', 120' and 150'. The 350' main shaft, known as the Annensky, is sunk in the footwall and connected with the veins by crosscuts. The bottom level, at 350', shows a vein of 38' extreme and 15' average width, giving ore of 10 to 40% copper tenor, with an average, from actual smelting returns, of 21.77%. This vein apparently is merely the paystreak of an ore body of immense width, a crosscut on the 300' level showing, in addition to the paystreak, 651' width of vein matter, carrying declining copper values, with a tenor of circa 1% copper only, at the end of the crosscut, hence it is probable that much of the vein hitherto untouched, may be found workable, eventually. At one point the former owners had extracted chalcopyrite, leaving a wall showing slickensides of what they considered slate, but which, upon investigation, by the present management, proved to be a vein of massive chalcocite. Ore developed is estimated at about 175,000 long tons, of circa 15% average copper tenor.

The old equipment at the mine, of a most primitive nature, has been replaced by a 700-h. p. steam plant, with a 50-h. p. hoist, good for 1,000' depth, and a 10-drill straight-line air-compressor. Buildings include a 50x100' stone machine-shop, 20x30' smithy, a variety of miscellaneous mine buildings, and dwellings for workmen, constituting a small town. The company maintains schools, baths, hospital and a church, for workmen and their families.

The coal mine, about 26 miles from the smelter, shows 2 seams of 60" and 65" thickness, and yields about 60,000 long tons of coal yearly, for the company's requirements, in addition to production for commercial uses. A coking plant, with beehive ovens, has been constructed.

The company has a 26-mile private railway, known as the Spassky-Kara-gandy line, of 600-mm. gauge, equipped with 5 locomotives and 75 cars.

Transportation between the mine and smelter, a distance of 70 miles, is

by team, a traction engine and ore-wagons bought for the purpose apparently having proven unsuitable. Under the old management ore was carried in carts, but so much ore was lost in transit that the track of the ore-carts remains emblazoned by a purple train of bornite, visible for several miles. The Russian government is said to plan building the Orenburg-Akmolinsk-Semipalatinsk railway to pass near the company's copper and coal mines, and consideration has been given to the matter of organizing a subsidiary company, to construct a railway between the mine and smelter.

The former smelting practice, under previous ownership, scarcely could have been improved on for badness. The ore was heap-roasted with coal, the process requiring 3 weeks, and as the heaps were located on the top of a hill, where furious winds prevailed, there was much cintering and heavy losses. The old smelter had 6 rectangular brick furnaces, of  $2\frac{1}{2}$  tons daily capacity each, and so poor was the former practice that a smelter charge of 16 tons of ore required 54 tons of fuel and flux for its reduction. Matte was run onto the casting floor, of sand, with frequent pools of water, causing serious explosions, and only about half of the matte was removed by tapping, the balance being dug out by hand. The slags run about 3% copper, and were fed back into the furnace repeatedly, until gradually worn out.

The old smelting plant, which was poorly designed, in bad condition and remarkably inefficient, has been patched up and improved, but remains far from modern. The capacity is reported, by the company, as 80 to 100 tons daily. Equipment includes 8 small Raschette blast-furnaces and seven 5-ton reverberatory furnaces, the works being designed for a capacity of 300 long tons fine copper monthly. The converter department has a 20-ton electric traveling crane and one stand, with shells of the Anaconda type, treating matte of 58% copper tenor, and turning out blister copper averaging 99% copper, 20 to 40 oz. silver and 0.4 oz. gold per ton. There is an electrically driven quartz mill for preparing converter linings.

The smelter power plant includes a 700-h. p. steam installation, 150-h. p. electric plant and a 150-h. p. air plant, with 2 Connerville blowers and a Bessemer blowing engine.

Considerable trouble was had with labor, and forces were changed, 1907. Production, Aug. 1, 1904, to Sept. 30, 1906, was 1,784 long tons fine copper, and July, 1907, was said to be 74 long tons fine copper. Production, 1907, is estimated at 1,750,000 lbs. fine copper. The company was claimed to have made a profit of £33,000 on the first 15 months' operations, but was compelled, a little later, to raise additional capital. The property is one of very great promise, but, owing to lack of adequate transportation facilities, labor troubles and other difficulties, its development to a point commensurate with its promise is likely to require some years.

#### SPECULATOR MINE.

MONTANA.

Owned by North Butte Mining Co.

#### SPECULATOR MINING CO.

MONTANA.

Office: Butte, Mont. Mine office: Clinton, Missoula Co., Mont. John A. Creighton, president; John Dougherty, vice-president and general manager. Property, near Clinton, includes the Black Hawk group, and options on adjoining lands. The Black Hawk is developed through the Cape Nome shaft, which this company sunk 200', to the 500' level. Company formerly owned the Speculator group, at Butte, sold, 1905, to the North Butte Mining Co. Former holdings, now owned by North Butte, were fully described Vol. V.

#### SPENCE & CO.

OREGON.

Office and mine: Kerby, Josephine Co., Ore. Dr. Jas. Spence, general

manager; C. W. Spence, superintendent. Lands, 11 claims, area 220 acres, 40 miles from a railroad, showing diorite and porphyry, carrying 4 veins, under development, estimated at 4' to 100' width, opened by 7 tunnels, of 40' to 800' length, showing cuprite, melaconite, malachite, azurite and chalcopyrite, mainly the latter, giving assays of 3 to 20% copper, 1 to 6 oz. silver and \$1 to \$10 gold per ton. Property is being developed slowly, with a small force, but is kept out of debt.

**SPENCE MINERAL CO.****CALIFORNIA.**

Office: San Francisco, Cal. Mine office: Spenceville, Nevada Co., Cal. Chas. W. Howard, Jr., general manager. Property is an old mine, operated since circa 1875, until main shaft caved in, 1903. Ores are auriferous and argentiferous sulphides, averaging about 5% copper and 45 to 50% sulphur, occurring in wide, irregular fissures, near the contact of diorite and granodiorite. Idle.

**SPENAZUMA COPPER CO.****ARIZONA.**

Dead. Was a fake, promoted by Dr. R. C. Flower. Formerly at Duncan, Graham Co., Ariz.

**SPIRIT LAKE POWER & MINING CO.****WASHINGTON.**

Office and mine: Chehalis, Lewis Co., Wash. R. C. Lange, secretary and general manager. Lands are said to show auriferous and argentiferous copper ores.

**SPITZEE GOLD MINES, LTD.****BRITISH COLUMBIA.**

Dead. Reconstructed, August, 1905, as Spitzee Mining Co., Ltd. Formerly at Phoenix, Boundary district, B. C.

**SPITZEE MINING CO., LTD.****BRITISH COLUMBIA.**

Mine office: Phoenix, Boundary district, B. C. Organized 1905, under laws of British Columbia, with capitalization \$350,000, shares \$5 par, as successor of Spitzee Gold Mines, Ltd. Lands, 110 claims, area circa 5,500 acres. Property produced, to September, 1905, circa 5,000 tons of ore, averaging \$12 per ton in value, and was said, at that date, to have circa 30,000 tons of ore in sight. Bonded, 1907, to LeRoi Mining Co., Ltd. Idle, except for diamond drilling, at last accounts.

**SPOKANE-ALASKA MINING CO.****ALASKA.**

Office: Spokane, Wash. Mine office: Ketchikan, Alaska. Wm. F. Newton, president and general manager. Lands, 15 claims, held under bond and lease, including the Sanford group, at Dahl Head, showing promising auriferous copper ore.

**SPOKANE COPPER CO.****WASHINGTON.**

Dead. Formerly at Cle-Elum, Kittitas Co., Wash.

**SPOKANE-MONTANA MINING & MILLING CO.****MONTANA.**

Office: Spokane, Wash. Mine office: Iron Mountain, Missoula Co., Mont. Organized circa 1907, under laws of Idaho, with capitalization \$1,000,000, by Michael Luxemburger, W. McCracken and others. Lands are said to show auriferous and argentiferous copper sulphides, at shallow depth.

**SPRAGG MINE.****NEVADA.**

Owned by Mason Valley Mines Co.

**SPRAGUE COPPER MINING CO.****WASHINGTON.**

Office: Spokane, Wash. Mine office: Chewelah, Stevens Co., Wash. Dr. H. E. Schliegel, manager. Property is said to show, at depth of 65', a 3' vein carrying copper, gold and silver values. Company plans a 100' tunnel.

**SPRINGDALE COPPER MINING CO.****OREGON.**

Mine office: Athena, Umatilla Co., Ore. Idle and apparently moribund.

**SPRINGFIELD GOLD & COPPER MINING CO., LTD.****IDAHO.**

Office: 720 Bank St., Wallace, Shoshone Co., Idaho. Mine office: Mullan, Shoshone Co., Idaho. Wm. Lively, president; D. A. McKenzie, vice-president

and manager; Jos. T. Whelan, secretary; John Jecklin, superintendent. Capitalization \$100,000, shares 10 cents par. Lands, 4 claims, patented, area 90 acres, well timbered, on Stevens Peak, in the St. Joe district, opened by tunnels, longest a crosscut adit of 1,700', which, at 1,400', cuts a 25' vein of copper ore below commercial grade. The upper tunnel shows chalcopyrite assaying up to 33% copper, with good gold values, and small shipments have been made.

**SPRINGFIELD-MEXICAN MINING CO. MEXICO.**

Office: 213½ South Sixth St., Springfield, Ills. Mine office: Unión de Tula, Autlán, Jalisco, Mex. Geo. F. Stericker, president; Geo. M. Morgan, vice-president; Harvey C. McCann, secretary; Alfred Orendorff, treasurer; Gerald G. Hereford, superintendent; Arthur Hay, engineer. Organized June 3, 1903, under laws of Arizona, with capitalization \$500,000, shares \$1 par.

Lands, 25 hectares, 6 miles south of Ayutla, including the Concepción group, showing 3 veins, of 4' average width, with circa 1,000' of workings. The various properties of the company show fissure veins in porphyry, of 7' average width, carrying malachite, azurite, bornite and chalcopyrite, giving average assays of 7% copper and 12 oz. silver per ton. Has shafts of 220', 58', 86', 25', 100' and 175', and 8 tunnels, 2 longest 258' and 340', estimated to show 10,000 tons of ore blocked out for stoping. Property is an antigua, closed 1821, reopened 1903. Equipment includes a 30-h. p. steam plant and 6 mine buildings. Nearest railroad, 40 miles, is the Mexican Central. Presumably idle.

**SPRING GULCH GOLD MINING CO. COLORADO.**

Mine office: Idaho Springs, Clear Creek Co., Colo. J. B. MacFarlane, superintendent, at last accounts. Property is the Banty group, carrying auriferous and cupriferous silver-lead ores. Has gasoline power. Idle.

**SPEUCE MOUNTAIN COPPER CO. NEVADA.**

Mine office: Sprucemont, Elko Co., Nev. Is said to employ 25 men. Lands, adjoining the Latham, show ore assaying up to 40% in copper tenor, and mine was producing some ore, August, 1908, through P. A. Cole, lessee. Production, 1907, returned as 1,338,198 lbs. fine copper.

**STADTBERGER HÜTTE GESELLSCHAFT. GERMANY.**

Office: Köln, Germany. Mine office: Nieder Marsberg, Westfalen, Germany. Otto Meurer, president; Anton Hamers, vice-president; Erich Meurer, mining engineer. Organized 1872, under laws of Germany, with capitalization 2,250,000 marks, shares 600 marks par. Paid dividends, to Dec. 31, 1907, of 112,500 marks.

Lands show fissure veins in argillaceous schist, carrying ore estimated to average 1.5% copper. The property, formerly operated by the Stadtberger Gewerkschaft, was discovered circa A. D. 800, and has been working, with few idle intervals, since A. D. 1150. Property includes 3 mines, the Mina, Friedrike and Oscar, latter idle, all three opened by new deep shafts.

Equipment includes a 400-h. p. steam plant and a 60-h. p. water plant.

The reduction plant includes a concentrator, smelter and 1-ton electrolytic refinery, latter treating argentiferous cement copper. Ore is reduced mainly by wet process. Production has been as follows: 1,609,358 lbs. in 1905; 1,388,898 lbs. in 1906; 1,322,760 lbs. in 1907, latter secured from 42,000 metric tons of ore treated.

**STANDARD CONSOLIDATED COPPER CO. ARIZONA.**

Office: 43-52 Wall St., New York, N. Y. Mine office: Clifton, Graham Co., Ariz. John K. Erskine, Jr., president; M. Gould, secretary and treasurer; preceding officers, John F. Brooks, Geo. Frazer and Smith Lent, directors; Geo. H. Dudley, manager. Organized 1903, under laws of Maine, with capitalization \$1,500,000, shares \$10 par. Is a holding company, controlling various subsidiary corporations through stock ownership. Shareholdings include \$299,515 of the capital stock of the Standard Copper Mines; \$700,000, or 70% of the

capitalization, of the Clifton Copper Mines, Ltd., and 26,107 shares of the capital stock of the Coronado Mining Co., control of latter being held by Shannon Copper Co. The Standard Consolidated Copper Co. owns the Standard, San José, Copper Centre and Los Angeles mines.

Lands owned and controlled by the company are all more or less contiguous, lying on both sides of Chase Creek, for 1½ miles, on the line of the Coronado railroad, 5 to 6 miles north of Clifton, the Standard mine being in the centre, flanked by the Clifton and San José groups.

The Standard mine, 5 claims, area 99 acres, is developed mainly open-cast, with upwards of one mile of underground workings, on a vein of 2' to 4' width, carrying ores of 3 to 60% copper tenor, with an average smelter return of circa 20%.

The Coronado group of 7 claims, adjoining the Standard mine, is supposed to carry a continuation of the Standard ore body.

The San José group of 8 claims, patented, area 48 acres, lying west of the Standard group and south of the King mine of the Arizona Copper Co., Ltd., is about one mile east of Metcalf, showing a 4' to 5' vein of chalcoite, of high average assay tenor. This property, slightly developed, is a small producer.

The Copper Centre group of 8 claims, partly patented, has a 280' shaft showing a 3' vein of chalcocite, giving assays of 30 to 40% copper.

Los Angeles group, 4 claims, area 80 acres, about 2 miles from the San José group, and near Morenci, is developed by a 110' shaft and a 225' tunnel.

Buildings include an engine-house, smithy, office, laboratory, boarding-house, general store, stable and several buildings. Mine equipment includes a gasoline hoist.

The ore from the Standard mine is taken to the Coronado railroad by a 3,200' Leschen aerial gravity tram, with drop of 800', which transports ore at an average cost of circa 5 cents per ton, as against a previous charge of \$2 per ton, when shipped by burros. The tram-line has shipping-bins at the lower terminal, on the railroad tracks.

Ore, formerly shipped to the Shannon, has gone to the Detroit smelter since 1906. Production has been as follows: 1,088,952 lbs. fine copper and 2,620 oz. fine silver, of which 31,853 lbs. copper came from the San José and 37,517 lbs. copper came from the Clifton mine, in 1905; 78,097 lbs. fine copper and 4,717 oz. silver in 1906; 497,286 lbs. fine copper in 1907.

The company, under former management, began dividends before such disbursements were warranted, and much trouble arose from quarrels among the directors, but apparently matters are harmonious again, and the property is considered meritorious.

#### STANDARD CONSOLIDATED MINES CO.

OREGON.

Office: Sumpter, Ore. Mine office: John Day, Grant Co., Ore. D. M. Campbell, president; Edw. W. Mueller, secretary; C. B. Wade, treasurer; H. H. Nicholson, manager. Organized May, 1903, under laws of Arizona, with capitalization \$5,000,000, shares \$1 par.

Lands, 26 claims, area circa 500 acres, on both sides of Dixie Creek, in the Quartzburg district, showing auriferous ores of copper, nickel and cobalt. The mine is said to have about 2 miles of workings, and equipment includes a 50-ton concentrator. Some ore was shipped, 1906. Presumably idle.

#### STANDARD COPPER CO.

ARIZONA.

Mine office: Casa Grande, Pinal Co., Ariz. Lands, 7 claims, 13 miles from Casa Grande. Idle several years and apparently moribund.

#### STANDARD COPPER CO.

UTAH.

Dead. Changed name, 1906, to Bingham Standard Copper Co. Formerly at Bingham Canyon, Salt Lake Co., Utah.

**STANDARD COPPER CO. OF ARIZONA.****ARIZONA.**

Office: 520 Chamber of Commerce, St. Louis, Mo. Location of lands, if any, unknown.

**STANDARD COPPER MINES.****ARIZONA.**

Office: 52 Wall St., New York, N. Y. Mine office: Clifton, Graham Co., Ariz. John K. Erskine, Jr., president; M. Gould, secretary; G. H. Dudley, manager. Organized Feb. 21, 1901, under laws of Arizona, with capitalization \$500,000, shares \$1 par; issued, \$425,000. Is controlled by the Standard Consolidated Copper Co., through ownership by latter of \$292,515 of issued stock. Paid dividends, to end of 1905, of \$69,500. Lands, 99 acres. Buildings include an engine-house, office, laboratory, smithy, boarding-house, stables, etc.

**STANDARD COPPER MINES CO.****ALASKA.**

Office: 68 William St., New York, N. Y. Mine office: Landlock, Alaska. Employs circa 15 men. Morris B. Mead, president; John L. Steele, vice-president and engineer; E. F. Bourke, secretary; J. O. Molander, treasurer; Jas. A. Bourke, general manager; preceding officers, Thos. R. Manley and Chas. Williams, directors. Organized Feb. 2, 1906, under laws of New Jersey, with capitalization \$300,000, shares \$100 par; issued, \$220,000. Bonds, \$300,000 issued. Cash on hand, Sept. 17, 1908, was \$30,000. Annual meeting, third Saturday in December.

Lands, 13 claims, area 260 acres, also a 14-acre millsite, in the Valdez district, showing greenstone, carrying 17 fissure veins, of which 4, under development, carry chalcopyrite, estimated to average 6% copper, 1 oz. silver and 90 cents gold per ton. Mine is opened by tunnels of 260', 80' and 460', estimated to show 20,000 tons of ore, with 12,000 tons blocked out for stoping.

The mine is connected with 500-ton ore-bunkers on a wharf at tidewater by a 3,300' aerial tram, in two sections, one of 912' and one of 2,526' length. Production, 1907, was circa 1,000 tons of 6% ore, yielding 120,000 lbs. fine copper. Company is operated as a close corporation, and seems developing along businesslike lines.

**STANDARD COPPER MINING CO.****MONTANA.**

Office: care of A. M. Stevens, Higgins Block, Missoula, Mont. Organized 1907, under laws of Montana, with capitalization \$1,000,000, shares \$1 par.

**STANDARD COPPER MINING CO.****WASHINGTON.**

Mine office: Bolster, Okanogan Co., Wash. J. W. McBride, Jas. Caughran, Patrick Welch, E. Garlinger and Fred N. Freer, directors. Lands are on Copper Mountain, in the Myers Creek district. Presumably idle.

**STANDARD COPPER MINING CO.****WYOMING.**

Office: 1212 Nicholas Bldg., Toledo, Ohio. Mine office: Encampment, Carbon Co., Wyo. Geo. P. Waldorf, president; Alphonse Mennell, vice-president; Jos. M. Spencer, secretary and treasurer; Chas. E. Winter, managing director; preceding officers, Fred O. Paddock, Harvey M. Cook, John H. Lloyd, John D. Dorn and John A. Scott, directors; A. H. Oldman, mine superintendent. Organized August, 1903, under laws of Wyoming, with capitalization \$1,500,000, shares \$1 par.

Lands, 10 claims, including the Susquchanna group of 6 patented claims, area 120 acres, about one-half mile east of the Itahay mine, carrying sundry contact and fissure veins, of 10' estimated average width, including a vein of 40' claimed width, opened by 7 pits and shafts of 10' to 207' depth, showing azurite, malachite, chalcocite, bornite and chalcopyrite, giving assays up to 18% copper and \$2 gold per ton, with small silver values. Has a 600' hoist and 5 buildings. Idle since Dec. 16, 1905.

**STANDARD COPPER MINING & REDUCTION CO.****MONTANA.**

Office: 109 East Broadway, Butte, Mont. Mine office: Divide, Silver Bow Co., Mont. John H. Lynch, president; C. W. Sigler, vice-

president; D. C. Campbell, secretary and treasurer; preceding officers, G. D. Beveridge, C. J. Fellows, F. C. Geiger and C. Woltjen, directors. Organized 1905, under laws of District of Columbia, with capitalization \$1,000,000, shares \$1 par. Lands, 5 claims, in the Fleecer Mountain district, circa 25 miles southwest of Butte and 5 miles from Divide, with a good wagon road to latter point. Property has 2 shallow shafts, showing ores giving good assay values in copper. Idle several years and apparently moribund.

**STANDARD COPPER PYRITES CO.****ALABAMA.**

Office: 1309 Brown-Marx Bldg., Birmingham, Ala. Mine office: Pyriton, Clay Co., Ala. Robt. Ross Zell, president; J. C. Clark, vice-president; G. Johnson, treasurer; J. D. Stagg, secretary. Capitalization, \$50,000. Lands show a large ore body, giving assays up to 6% copper and carrying 42 to 46% sulphur. It is probable that copper values will decrease at slight depth, but property should prove valuable for its sulphur ores alone.

**STANDARD DEVELOPMENT CO.****COLORADO & CALIFORNIA.**

Office: 52-240 La Salle St., Chicago, Ills. W. A. McGuire, president; C. N. Harlan, vice-president; R. J. Jennings, second vice-president; J. Jennings, general manager; E. C. Boisot, secretary and treasurer. Capitalization \$10,000,000, shares \$1 par. Supposedly controls, through stock ownership, Grand Republic Mining Co. and Mount Zirkel Mining Co., of Larimer county, Colorado, which apparently are moribund. Is said also to own the Jennie "group," of 20 acres, on the McCloud river, in Shasta county, California. Company apparently is merely a stock-jobbing enterprise.

**STANDARD GOLD & COPPER MINING CO.****OREGON.**

Dead. Absorbed, 1903, by Standard Consolidated Mines Co. Formerly at John Day, Grant Co., Ore.

**STANDARD MAGDALENA MINES CO.****MEXICO.**

Office: Los Angeles, Cal. Mine office: Nogales, Magdalena, Sonora, Mex. Has a 107' shaft.

**STANDARD MINES CO.****CALIFORNIA.**

Office: 318 Grant Bldg., Los Angeles, Cal. Mine office: Cima, San Bernardino Co., Cal. John W. Kemp, president; Frank S. Adams, secretary; preceding officers and R. B. Patterson, directors. Lands, 11 full and several fractional claims, 10 miles north of Cima, having a 356' shaft, with circa 2,000' of workings, showing carbonate ores near surface, with melaconite and sulphide copper ores on the 100' level. Shipped, 1906, to Salt Lake smelter, 81 carloads, returning an average of circa 10% copper, 5 oz. silver and \$2 gold per ton. Production, 1906, estimated at 250,000 lbs. Property considered promising.

**STANDARD MINING CO.****IDAHO.**

Mine office: Silver City, Owyhee Co., Idaho. F. M. Clemens, superintendent. Has lead and copper ores, presumably argentiferous, with steam power, employing circa 20 men, at last account.

**STANDARD PYRITIC SMELTING CO., LTD.****BRITISH COLUMBIA.**

Dead. Formerly at Greenwood, Boundary district, B. C.

**STANLEY BUTTE & CONSOLIDATED COPPER CO.****ARIZONA.**

Office: 601-17 St. L., New York, N. Y. Mine office: San Carlos, Gila Co., Ariz. Jas. E. Carpenter, general manager; Harry Pryor, superintendent. Lands, 60 claims, held under bond and lease, having a 125' tunnel. Presumably idle.

**STANLEY MINES CO.****COLORADO.**

Office: 305 Colorado Bldg., Denver, Colo. Mine office: Idaho Springs, Clear Creek Co., Colo. Arthur G. Brownlee, president and general manager; John M. Jackson, superintendent. Organized, circa 1906, as successor of the Consolidated Stanley Mining & Milling Co. Lands, circa 90 claims, showing

auriferous and argentiferous lead and copper ores. Has steam and water power and 10-stamp mill, employing about 40 men, at last accounts.

**STAR CONSOLIDATED MINING CO.**

UTAH.

Dead. Merged, 1907, in Black Jack Consolidated Mining Co. Formerly at Park City, Summit Co., Utah.

**STAR COPPER MINING CO.**

MICHIGAN.

Office: care of John C. Watson, 68 Devonshire St., Boston, Mass. F. H. Raymond, president; C. O. Burbank, secretary and treasurer. Lands, circa 760 acres, in Sections 9, 10 and 16, Town 58 North, Range 28 West, Keweenaw county, Michigan. Has 2 shafts, deepest 300', on a fissure vein, south of the greenstone, sunk 1851-1857, when company expended circa \$70,000. Idle since 1857.

**STARLUS COPPER & GOLD MINING CO.**

Dead. Formerly had an office at 215 Dearborn St., Chicago, Ills.

**STATE COMMERCIAL DEVELOPMENT CO.**

MONTANA.

Letter returned unclaimed from former office and mine, Butte, Silver Bow Co., Mont. J. E. Wharton, president. Lands are claims north of Butte. Idle and apparently moribund.

**STATE LINE COPPER MINING CO.**

WYOMING.

Dead. Reorganized, circa 1904, as State Line Mining Co. Formerly at Encampment, Carbon Co., Wyo. Described Vol. IV.

**STATE LINE MINING CO.**

WYOMING.

Office: 300 Century Bldg., Denver, Colo. Mine office: Encampment, Carbon Co., Wyo. D. W. Aupperle, president; Hon. S. M. Elwood, vice-president; W. W. Wemott, secretary and treasurer. Organized, circa 1904, with capitalization \$1,500,000, shares \$1 par, as a reconstruction of the State Line Copper Mining Co. Lands, 17 claims, area 340 acres, near the Colorado line, showing a 3' vein of ore, giving assays of 21% copper, from 17 pits and shallow shafts of 10' to 60' depth. Company started a crosscut tunnel and apparently is in controversy with an adjoining company, over titles. Idle.

**STAUFFER CHEMICAL CO.**

CALIFORNIA.

Office: San Francisco, Cal. Mine offices: Kennett, Shasta Co., Cal., and Oakland, Alameda Co., Cal. Chas. E. Kunze, manager; Geo. F. Graves, superintendent. Oakland property, 80 acres, known as the Alma mine, developed mainly by tunnels, produces cupriferous pyrite, carrying 1.5 to 3.5% copper, up to 50% sulphur, and up to \$2.50 gold per ton, occurring in lenses between serpentine and metamorphosed chert, in a belt traced 3,000'. The Shasta county property is the Summit group, lying northwest of the Mammoth, in the Backbone district, taken over, 1908, under bond and lease, from the Phoenix Security Co.

**STEAMBOAT MINING CO.**

UTAH.

Mine office: Brighton, Salt Lake Co., Utah. Idle several years.

**STEAMBOAT MINING & MILLING CO.**

COLORADO.

Mine office: Steamboat Springs, Routt Co., Colo. Lands, in the Copper Ridge district, show a 30' vein, carrying a narrow pay streak of high grade copper ore.

**STEMP SPRINGS COAL & POWER CO.**

WYOMING.

Office: 55 High St., Oshkosh, Wis. Works office: Copperton, Carbon Co., Wyo. Employs 35 men. E. E. Mellens, president; Henry L. Larsen, vice president; H. O. Granberg, secretary, treasurer and general manager; preceding officers, M. Brinton and J. S. Armstrong, directors; E. M. Sanders, superintendent; J. H. Glazier, mine superintendent; O. C. Finkelnburg, engineer. Organized Nov. 21, 1905, under laws of Wyoming, with capitalization \$250,000, shares \$1 par. Company reported, September, 1908, having \$20,000 cash on hand, with no liabilities.

Lands, 762 acres, patented, being 640 acres of coal lands and 122 acres of copper lands, latter including a smelter site, in the Battle Lake district. Copper property shows fissure veins in schist and contact deposits between diorite and quartzite, of which one, of 11' estimated average width, traceable circa 3,000', carries copper-nickel sulphides, opened by a 155' shaft and a 273' tunnel. The coal lands carry 3 beds of coal, of 3' to 6' thickness, at intervals of circa 75'. A 15' waterfall is leased, for 20 years, from the Jackpot Mining Co., with privilege of renewal. Equipment includes a 40-h. p. steam plant at the mine, with a 3-drill Ingersoll-Sergeant air-compressor. Buildings include a 38x40' log machine and carpenter shop and a 16x24' smithy.

The smelter, 20 miles from a railroad, has a 60-ton McDonald furnace, planned to turn out 50% matte, or pimple metal of about 80% copper tenor. The smelter has a 100-h. p. steam plant. Company plans continuous development and blowing in the smelter.

#### **STEMWINDER MINE.**

#### **BRITISH COLUMBIA.**

Owned by Dominion Copper Co., Ltd.

#### **STEPHENSON-BENNETT CONSOLIDATED MINING CO. NEW MEXICO.**

Office: 515 Keith & Perry Bldg., Kansas City, Mo. Mine office: Organ, Donna Ana Co., N. M. J. L. McCullough, president and general manager; C. B. Gill, vice-president; S. Lehman, secretary; F. M. Johnson, treasurer; preceding officers, G. A. Chapin, T. S. Semple and H. B. Holt, directors; Hugh Yale, mine foreman. Organized 1889, under laws of New Mexico, and capitalization since increased to \$2,000,000, shares \$1 par.

Lands, 17 claims, 2 miles south of Organ, in the Organ Mountains, 15 miles from the Santa Fé railway, showing granite and limestone carrying silver veins, also ore bodies with strong copper indications, developed by a 350' two-compartment shaft, and a 2,000' drainage tunnel. The lower level of the shaft is said to show an ore body of 5' to 40' width, with a 500' chute carrying argentiferous and auriferous copper ore.

Equipment includes a steam plant, with 3 boilers, 2 hoists good for 500' each, and a 10-drill Ingersoll-Rand air-compressor.

Buildings include a smithy, engine-house, compressor-house, warehouse, changing-house, boarding-house, office, store and 17 dwellings.

The concentrator, of 50 tons daily capacity, built of wood, has 2 jaw crushers, 2 jigs and 4 Wilfley tables.

#### **STEPHENS PEAL COPPER & GOLD MINING CO., LTD.**

#### **IDAHO.**

Mine office: Wallace, Shoshone Co., Idaho.

#### **STEPTOE LEAD & COPPER CO.**

#### **NEVADA.**

Office: care of Wm. H. Tibbals, secretary, Salt Lake City, Utah. Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. A. J. Davis, president; J. J. Whittaker, vice-president; H. P. Clark, treasurer; preceding officers and M. C. McEntire, directors. Organized 1907, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 4 claims, in the Duck Creek district, northwest of Ely and about 2 miles from the Steptoe smelter.

#### **STEPTOE MINING CO.**

#### **NEVADA.**

Dead. Property sold, Sept. 4, 1902, to New York & Nevada Copper Co. Formerly at Ely, White Pine Co., Nev.

#### **STEPTOE VALLEY MINING & SMELTING CO.**

#### **NEVADA.**

Office: 165 Broadway, New York, N. Y. Works office: McGill, White Pine Co., Nev. Silas W. Eccles, vice-president and manager; Thos. Cox, general superintendent. Organized circa January, 1907, under laws of Maine, with capitalization \$10,000,000. Is controlled, through joint ownership of shares, by Nevada Consolidated Copper Co. and Cumberland-Ely Copper Co., which are controlled by American Smelters Securities Co., which is controlled by Ameri-

can Smelting & Refining Co. Lands and improvements cost \$4,115,821.02, to end of 1907, and the completed plant is estimated as likely to cost approximately \$10,000,000.

Lands are 8 square miles, with water rights pertaining thereto, the company, with great foresight, having secured a large area, in order to prevent damage suits from agriculturists, because of smelter fumes. The lands are on the eastern side of Steptoe Valley, on the slope at the foot of the Schell Creek range, 14 miles northeast of Ely and 22 miles from the mines, on the line of the Nevada Northern railway. The smelter site is 320 acres, in a parallelogram one mile long and one-half mile wide, on a hillside having a grade of about 10%, permitting terracing of the works and handling material by gravity throughout. Lands carry water rights to Duck Creek, on the eastern slope of the hill, also water rights to the McGill ranch, estimated as capable, jointly, of furnishing water for a 25,000-ton plant.

The reduction plant has all main buildings of steel frame, and is excellently planned and equipped. At the end of 1908 the plant was of 4,500 tons daily capacity, but is so designed that it can be increased to an ultimate daily capacity of 20,000 tons.

The ore-bins, of timber, about 300' in length, are in three 6,000-ton units, located about one mile from the smelter. Ore is drawn from the bottom of the bins by belt-conveyors, which take it to small distributing bins, at the head of each section of the mill.

The sampling mill, at the southern end of the yard, has a gyratory crusher, Blake crusher, 1 pair of rolls, 3 Vezin samplers, 1 trommel and 2 conveyors.

The mill, nearly one mile from the smelter, is of steel, 338x567' in size, in terraces, supported by beams of reinforced concrete. The mill is planned to have, eventually, 10 units, first rated at 1,250 tons daily capacity each, and later planned to be of 1,333 tons daily capacity each, but which actually will have an average capacity of nearly or quite 1,500 tons each, giving the mill an ultimate capacity of circa 15,000 tons daily. Three of the 10 units were completed, and in use, at the end of 1908, each being subdivided into a right-hand and left-hand section, each section being 94' 6" wide and 338' 5" long, not including the bins, giving a floor area of about 43 square feet per ton of daily ore capacity. The sections are duplicates and each can be operated independently.

The following description of one section will serve as a description of every section: From the distributing bin ore passes to a trommel having  $\frac{1}{8}$ " apertures, oversize going to 15x36" rolls and undersize to a  $\frac{5}{8}$ " trommel, the rolls delivering crushed ore to an elevator, which returns the product to the screening system. Ore from the second trommel passes to a second set of 14x36" rolls, which deliver the product to an elevator, while undersize goes direct to an elevator discharging into a trommel of  $\frac{3}{8}$ " size, from which oversize goes back to the second set of rolls, thence returning with the regular flow of material, undersize going to 2-mm. tormmels, and oversize to a third set of 14x36" rolls, which deliver their product to an elevator, in the same manner as the second set of rolls. After crushing, the 2-mm. product goes to 8 Richards vortex classifiers, giving coarse and fine products, from 2 spigots, the coarse concentrates being treated by 5 jigs, which make finished concentrates and a hutch-product that is treated on 7 Wilfley tables, which make finished concentrates, and tailings that go to Huntington mills for regrinding. The fine concentrates of the Richards classifiers go to 10 Wilfley tables making finished concentrates, middlings and tailings, the middlings, together with those from the Wilfleys treating coarse concentrates, and the tailings from the jigs, being combined and taken to 3 Calow settling tanks, from which thickened pulp is reground in four 6' Huntington mills, crushing to 60-mesh size. The 60-mesh

product from the Huntington mills is elevated to the screening floor, where it joins the overflow from the Richards classifiers, going to a dewatering tank, and thence to five 24" Calow 60-mesh screens, oversize going back to Huntington mills for regrinding, and being returned thence to screen, undersize, together with the overflow from the dewatering tanks, going to a set of 5 V-boxes. The spigot product of the V-boxes goes to 19 Wilfley tables, and the overflow to 10 Calow settling tanks, thickened pulp from which is fed to 20 Wilfley tables, the Wilfleys treating the spigot and overflow products, making finished concentrates, tailings and middlings, latter retreated, those of the first series of tables going to 8 Calow tanks, on the vanner floor, giving a pulp treated by eight 6x16' Frue vanners making concentrates, concentrates from the second set of Wilfleys going to 8 Calow tanks, thickened product from which is treated by a second set of eight 6x16' Frue vanners. Overflow from the third Wilfley settling tanks, together with that from the first and second vanner tanks, goes to a series of 8 tanks for final settlement, these tanks giving a product which passes to a third set of eight 6x16' Frue vanners. Concentrates from the Wilfley tables and vanners go to 2 tanks, 28' in diameter and 6' deep, water draining until tanks are filled. Beneath the tanks are railroad tracks, and concentrates are discharged into cars, the tanks being filled and unfilled alternately. Concentrates are handled throughout the mill by sluicing through launders, and are collected in tanks, and removed therefrom by Blaiddell excavators. Overflow from the mill goes to slum-ponds for settling.

The ore treated by the mill is friable, hence liable to make an unduly large proportion of slimes, but sliming is obviated, to a considerable extent, by very careful screening and crushing to 2-mm. size before any jiggling is attempted. The Nevada Consolidated ores carry an excess of silica, and the Cumberland-Ely ores carry an excess of iron, giving, in combination, a good furnace charge. The mill was said, July, 1908, to be concentrating Nevada Consolidated ores about 10 into 1, and Cumberland-Ely ores about 4 into 1, effecting an average saving of 70% of assay values, raw ores assaying about 2 to 2.5% copper from the Nevada Consolidated, and 2.5 to 3% from the Cumberland-Ely.

The calcining department, 228' in length, of steel frame, has sixteen 18' McDougall roasters, of about 40 tons daily capacity each, which reduce the sulphur tenor of the ore to about 7.5%. Limestone flux is added to the ores before roasting, and hot calcines are trammed directly to a reverberatory smelter, or, when necessary, to a 1,500-ton brick and steel storage-bin, which serves as a balance-wheel between the calcining and smelting departments. The McDougall roasters discharge fumes into a double flue, each part of 300 square feet cross-section and 500' in length, leading to a brick stack 250' high, of 18' inside diameter.

The smelter, of about 1,000 tons daily capacity, had 2 units completed and a third nearing completion, with work begun on a fourth, at the end of 1908. The smelter was designed by Walter G. Perkins and constructed under his supervision. Each group of furnaces has independent flues and chimneys. There is one 42x240" blast-furnace, for remelting converter slag and a small quantity of raw ore, so planned that it can be enlarged, if desired, to 4x80' in size. The blast-furnace is 13' above the ground-level, with a height of 16' from the tuyeres to the charging floor, operating with a 10' column charge and 24 to 30 oz. blast pressure. The furnace has separate water-jackets with 4 tuyeres, each with its own blast-box and independent air and water connections, so that any jacket may be removed by breaking three simple connections. Charging is done by cars dumped pneumatically, as at the Washoe works, and matte is tapped into ladles, on cars, for conveyance to the converter department, slag being granulated and sluiced away.

The furnace building has two 19x111' reverberatory furnaces, with room

for a third, these being of about 250 tons daily capacity each. The reverberatories have 8x19' grates, and ashes are sluiced to a cinder plant, for recovery of partly burned carbonaceous fuel, similar to that of the Washoe works. Each reverberatory has two 400-h. p. boilers, arranged in parallel, with suitable by-passes, instead of tandem, and each furnace has two charge-hoppers, each with 3 holes, for ore, and one charge-hopper with 4 holes for coal. The reverberatories have a flue of 300 square feet section, 200' long, doubling back through a dust-chamber of 1,000 square feet section, 200' in length, leading to a 300' brick chimney, 15' in diameter.

The converter building, 120x170' in size, has 3 stands, operated electrically, with 96x115" shells, of barrel type, of about 8 tons capacity each. Molten matte from the reverberatories is brought to the converter department in ladles, on cars running on a track behind and above the converters, which are charged through a chute, while the shells remain in position for blast, and silicious ores are charged into shells on the same plan as molten matte. The booms from the converters lead to a flue of 100' square section, 200' in length, running to a 100' stack of 10' inside diameter. Blister copper is poured into a conveyor casting machine, which takes the pigs through a cooling tank, and delivers them to a loading platform, above which are air-hoists on a monorail system, for handling the pigs. Converter product is blister copper averaging 99.2% in tenor. Slag is poured into a casting machine, and bricks delivered to a bin, whence taken to the blast-furnace for resmelting, and slag skulls are broken in a 12x24" Blake crusher, before going to the blast-furnace slag-bin.

The power-house, 186x320' in size, has eight 400-h. p. Babcock & Wilcox boilers, with American automatic stokers. Equipment includes two 750-kw. and two 1,000-kw. Bullock generators, developing a 600-volt alternating current, used in the works, but stepped up for transmission to the mines. Blowing engines include an Allis-Chalmers 6,000' blower and a No. 10 Connerville 12,000' cross-compound blower, both direct-connected to compound condensing Corliss engines. A Laidlaw-Dunn-Gordon air-compressor, of 1,000 cubic feet capacity, furnishes converter blast.

The works have about 12 miles of standard-gauge railroad track, and ore and material are transported by small steam locomotives.

Miscellaneous buildings at the smelter include a 75x160' car-shop, doing general repairing for the Nevada Northern railway; a machine-shop of steel frame and concrete blocks, a carpenter-shop and warehouse. The administration buildings are arranged in a semicircle facing west, with the general office in the center, supported by a large assay office and laboratory, and flanked by the mess-house and dwellings for heads of departments, the arrangement being pleasing to the eye, as well as eminently utilitarian.

The works were started, on a test run, April, 1908, and the first shipment of finished copper was made in August, in which month production was 1,371,261 lbs. fine copper. For November, 1908, production was 2,963,000 lbs. fine copper, of which the Nevada Consolidated made 1,491,000 lbs. and the Cumberland-Ely 1,372,000 lbs., the Nevada Consolidated ore yielding a net extraction of about 36 lbs. fine copper per ton, and the Cumberland-Ely circa 48 lbs. per ton. The Steptoe works are among the largest and most complete in the world, and are well designed, well equipped and well managed.

#### **STERLING COPPER CO.**

Dead. Formerly at Clifton, Graham Co., Ariz.

#### **STEUBENVILLE & JALISCO MINING CO.**

**ARIZONA.**

**MEXICO.**

Office: Steubenville, Ohio. Letter returned unclaimed from former mine office, Hostotipaquito, Abualuleo, Jalisco, Mex. Organized 1906, with capitalization \$1,000,000. Idle and apparently moribund.

**STEVENS COPPER CO.**

Office: care of Fred Enos, secretary, Bridgeport, Conn. Mine office: Clifton, Graham Co., Ariz. Henry Setzer, president; Chas. D. Hawley, vice-president; Frederic S. Hunt, treasurer; Chas. E. Stevens, superintendent. Lands, 39 claims, area 780 acres, circa 2 miles from Metcalf. Country rock is granite, overlaid by Cambrian quartzite and Silurian limestone, with much faulting, and intrusive porphyritic dykes, ores occurring near the fault-lines. Shipped ore, early 1906, running 12 to 30% copper, to the Shannon smelter. Property considered promising. Presumably idle.

**STEVENS PEAK COPPER MINING CO.****IDAHO.**

Dead. Formerly at Mullan, Shoshone Co., Idaho.

**STILLAGUAMISH & SULTAN MINING CO.****WASHINGTON.**

Office: 606 Bailey Bldg., Seattle, Wash. Letter returned unclaimed from former mine office, Silverton, Snohomish Co., Wash. Richard Sykes, president; J. W. Clise, vice-president and general manager; Willis B. Herr, secretary. Organized Sept. 22, 1892, under laws of Washington, with capitalization \$3,000,000, shares \$50 par. Lands, 15 claims, area 275 acres, in the Stillaguamish district, with 1,400' of mine openings, showing low grade auriferous copper ore. Idle since 1905 and apparently moribund.

**STILLMAN COPPER MINING CO.****WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo.

**STOBIE MINING CO.****ONTARIO.**

Mine office: Desbarats, Algoma, Ont. James Stobie, president; A. B. Upton, vice-president and general manager; John Lear, secretary and treasurer. Organized 1900, under laws of Ontario, with capitalization \$1,000,000, shares \$1 par. Lands, 134 acres, in Block O, Johnson township, Algoma, Ontario, showing a vein of 3' to 5' width, carrying chalcocite, bornite and chalcopyrite. A carload of ore, shipped 1901, gave smelter returns of 18% copper. Idle since circa 1901 and apparently moribund.

**STOCKMAN COPPER, LTD.****TRANSVAAL.**

Letter returned unclaimed from former office, Silesia Bldg., Main St., Johannesburg, Transvaal. Mine office: Turffontein, Pretoria, Transvaal. H. J. Hofmeyer, W. Gordon and H. A. Stockman, directors. Organized circa November, 1907, under laws of Transvaal, with capitalization £3,000. Property is a copper prospect on Farm Elofffontein No. 282. Idle and apparently moribund.

**STOCKTON COPPER MINING CO.****CALIFORNIA.**

Dead. Formerly at Burney, Shasta Co., Cal.

Dead. Was succeeded, January, 1906, by Stoddard Mines Co. Formerly at Stoddard, Yavapai Co., Ariz. Fully described Vol. VI.

**STODDARD MINES CO.****ARIZONA.**

Office: 225 Fifth Ave., New York, N. Y. Mine office: Stoddard, Yavapai Co., Ariz. Employs 15 men. W. H. Reynolds, president; Hon. Isaac T. Stoddard, vice-president; C. M. Stoddard, secretary and treasurer; J. S. Murphy, general manager. Organized January, 1906, under laws of Arizona, as successor of Stoddard Copper Co., with capitalization \$100,000, shares \$1 par; fully issued. Annual meeting, in January.

Lands, 6 claims, patented, area 105 acres, known as the Binghamton mine.

some distance from a railroad, showing fissure veins in schist, opened by a 500' tunnel and shafts of 600' and 190', with circa 4,000' of workings. Mine was discovered 1882, and reopened, June, 1906, by present company.

Equipment includes a 50-h. p. steam plant, with 2 hoists and a 2-drill air-compressor, and there are 6 mine buildings. Company reports that good ore bodies are being developed on the 600' level. Property considered promising.  
**KUPFERERZBERGWECK -STOLZENBURG.**

**LUXEMBURG.**

Mine office: Stolzenburg bei Diekirch, Luxemburg.

**STONE CREEK COPPER MINING & MILLING CO.**

**MONTANA.**

Dead. Formerly at Dillon, Beaverhead Co., Mont. Described Vol. V.  
**STONEWALL COPPER CO.**

**ARIZONA.**

Dead. Was a swindle, perpetrated by the notorious Wm. F. Wernae gang, of St. Louis. Formerly at Pima, Graham Co., Ariz.

**STORA KOPPARBERG BERSLAGS AKTIEBOLAG.**

**SWEDEN.**

Office, mines and works: Falun, Kopparberg's län, Sweden. E. J. Ljungberg, director; Lars Yngström, assistant director and general manager; Th. Witt, mining engineer; K. A. Akerblom, superintendent leaching plant. Capitalization 9,600,000 kroner, shares 1,000 kroner par. Net earnings, 1907, were 2,377,987 kroner.

Lands, 5 claims, 3 patented and 2 unpatented, area 43 hectares. Mine was worked as early as A. D. 1288, and presumably earlier, oldest privileges of the present company dating from Feb. 24, 1347.

Lands include several mines and many ore bodies, largest being the Storgrufa, 370 meters long by 220 meters wide, and about 320 meters deep, mostly mined out, leaving an open pit circa 220' deep. Ore is chalcopyrite, containing selenium and bismuth, giving average returns of 2.7 to 3% copper, 10 to 15 grams silver and 2.5 to 3 grams gold per ton. Has 14 shafts, with aggregate depth of 1,800 meters, deepest being 343 meters, with about 33 kilometers of tunnels. The copper mine employs about 100 men, and gives a yearly production of about 45,000 tons of ore, which, after hand-cobbing, yields about 15,000 tons of leaching ore.

The roast stalls are one-half kilometer from the mine, and the leaching plant is one-half kilometer beyond the furnaces, all connected by tram-line. The roasted ore is crushed with salt, reroasted and leached with dilute sulphuric acid, in tanks, metallic contents of the leach-water being precipitated on scrap iron, as cement copper, which is dissolved in sulphuric acid and turned out as bluestone. Yearly production averages circa 300 kgs. silver, 80 kgs. gold and 1,250 metric tons bluestone, equivalent to 300 tons fine copper. Company conducts extensive industrial operations, owning and operating iron and steel plants, a pulp-mill, paper-mill, sawmill, etc., and is developing an extensive water-power on the Dala river. Is one of the best managed and most successful industrial enterprises of Sweden.

**STORGRUFA MINE.**

**SWEDEN.**

Owned by Stora Kopparberg Berslags Aktiebolag.

**STRATTON GOLD & COPPER MINING & MILLING CO.**

**COLORADO.**

Office: Salida, Colo. Mine office: Turret, Chaffee Co., Colo. R. F. Stratton, president; F. S. Green, vice-president; Dr. J. F. Roe, secretary; Geo. Sullivan, treasurer. Organized 1905, under laws of Colorado, with capitalization \$500,000, shares \$1 par. Lands, 16 claims, in 2 groups, the Stratton group of 11 claims, area 220 acres, being in the Badger Creek district of Frémont county, and the Copperopolis group of 5 claims being near Turret. The Stratton group has a 1,400' crosscut tunnel, with back of 900', showing ore assaying up to 46% copper. The Copperopolis group is said to have a 600' shaft, showing an 8' vein giving ore assaying well in copper. Company said to plan a leaching plant.

**STRICKLEY-MONTEZUMA MINING CO.**

UTAH.

Mine office: Bingham Canyon, Salt Lake Co., Utah. W. J. Strickley, superintendent, at last accounts. Has auriferous copper ores, and steam power. Idle several years and apparently moribund.

**STRONG COPPER CLAIMS CO.**

OREGON.

Dead. Lands sold, circa 1901, to Waldo Smelting & Mining Co. Formerly at Waldo, Josephine Co., Ore.

**STRONG COPPER MINING CO.**

WYOMING.

Office: 210 Grant Ave., Laramie, Wyo. Mine office: Leslie, Albany Co., Wyo. Employs 15 men. N. E. Corthell, president; M. E. Stickney, vice-president; Dr. I. R. Swigart, secretary, treasurer and general manager; E. P. Baker, mine superintendent. Organized Jan. 17, 1903, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par; issued, \$837,959. Annual meeting, first Wednesday in January. Lands, 16 claims, unpatented, area 260 acres, circa 14 miles northeast of Laramie, reported to show a fissure vein in pegmatite, which perhaps is a pegmatite dike, and contact deposits between limestone and granite, latter, of 7' estimated average width, carrying malachite, chalcocite, bornite, chalcopyrite, galena and wulfenite, giving average assays of 4% copper, 5 oz. silver and \$3.60 gold per ton, with some lead and molybdenum. Mine has about 20 shallow pits, a 335' shaft and a 450' tunnel, with circa 1,300' of workings, estimated by management to show 10,000 tons of ore, mainly chalcopyrite, with considerable chalcocite on the 250' level, the vein carrying 2' to 7' of concentrating ore, with occasional pay streaks of ore of smelting grade.

Equipment, burned July, 1907, has been replaced by an 80-h. p. steam plant, including a 25-h. p. hoist and a 3-drill Norwalk air-compressor. There are 6 mine buildings, and company plans a concentrator.

**DAVID A. STUART.**

PERÚ.

Office and mine: Quicachaca, Yauyos, Lima, Perú. Property, near the coast, in the first mountain range back of Lima, carries argentiferous copper and lead ores, also coal.

**SUBENI COPPEBS (NATAL), LTD.**

NATAL.

Office: Pietermaritzburg, Natal. Mine office: Vryheid, Zululand, Natal. J. M. Calderwood, M. I. M. M., consulting engineer. Organized July, 1908, under laws of Transvaal, with capitalization £45,000, shares £1 par. Of the capital stock, £15,000 was issued for working capital, and £24,000 was issued to the vendors, leaving £6,000 unissued.

Lands, circa 2,000 acres, freehold, on the Subeni river, about 42 miles south of Vryheid.

Property shows granite, with bodies of schist carrying 2 copper veins, of 4' to 8' width, containing bornite and chalcopyrite, developed to depth of circa 150' by shafts and tunnels. Ore was discovered 1879, but operations were suspended during the Boer war, and the native rebellion. Active work was begun August, 1908, but a shipment, 1907, of 150 tons of hand-picked ore, is said to have returned an average of 30% copper. Formation is said to be somewhat disturbed and ore pocketed, but property is considered not devoid of promise.

**SUCCESS COPPER MINING CO.**

ARIZONA.

Dead. Formerly at Quartzite, Yuma Co., Ariz. Fully described Vol. VII.

**SUCCESS MINING CO.**

MONTANA.

Mine office: Saltese, Missoula Co., Mont. Leslie Bailor, vice-president and assistant manager; H. F. Samuels, president and general manager; O. H. Linn, mine superintendent. Property is the Monitor mine, held under bond and lease, with 700,000 shares of the 1,000,000 shares capitalization of the Monitor in escrow, at a price understood to be about \$150,000. Bond and lease expire July 1, 1910, and by the terms of the agreement, the Success company must

expend \$60,000 on development work, sinking shaft 300' additional and making 1,600' of lateral openings. Net smelter returns are to be held by trustees, to be returned to operators, up to \$60,000.

**SUCCESS MINING CO.**

**WASHINGTON.**

Dead. Formerly at Conconully, Okanogan Co., Wash.

**SUDSBURY MINING CO.**

**BRITISH COLUMBIA.**

Office: Spokane, Wash. Mine office: Deadwood, Boundary district, B. C. Jas. Schiewe, president; preceding officer, J. D. Whitels, A. S. Elder, W. C. Reeder and W. O. Lewis, directors. Organized April, 1907, under laws of Washington, with capitalization \$250,000. Lands, one-half mile from the Sunset mine of the Dominion Copper Co., have 2 shafts, one, of 60', being said to have a good showing of low grade copper ore. Has electric power. Property considered promising.

**SUERTE MINING CO., S. A.**

**MEXICO.**

Mine office: La Cananea, Arizpe, Sonora, Mex. Harry Lane, president; John F. Evans, vice-president; W. R. Peters, secretary; Louis Lease, treasurer and general manager. Organized 1908, under laws of Mexico. Lands, 60 hectares, in the Sierra Santa Cruz, west of La Cananea. Began development circa September, 1908, by shaft.

**SUGAR LOAF MINING CO.**

**SOUTH DAKOTA.**

Dead. Formerly at Custer, Custer Co., S. D. Described Vol. VII.

**SULITELMA AKTIEBOLAG.**

**NORWAY.**

Office and works: Helsingborg, Malmöhus Län, Sweden. Mine office: Sulitjelma, Nordland, Tromsö, Norway. Employs circa 2,000 men. Lord-Lient. G. Tornerhjelm, president; Consul Nils Persson, vice-president and general manager; Sture Person Henning, assistant general manager; Vice-Consul C. Ingesson, secretary; preceding officers, Aug. Sylvan, Thure Röing, R. M. B. Schjöllberg, C. E. Hedström, Hon. Albert Berg von Linde, Prof. Hjalmar Sjögren and Ivar Person Henning, directors; Holm Holmsen, general manager; Fr. Carlson, mine superintendent; P. Kjølsæth, mill superintendent; J. Westlake, smelter superintendent; L. D. Jenssen, engineer.

Organized 1890, under laws of Sweden, with capitalization 3,000,000 kroner, increased, 1906, to 6,000,000 kroner, and again increased, 1908, to 8,000,000 kroner, shares 500 kroner par. Paid an 8% dividend, 1905, amounting to 240,000 kroner, and paid total dividends, to end of 1905, of 1,800,000 kroner. Annual meeting, in May.

Lands, 253 claims, area 55 acres, also a 1½-acre millsite, and 193 square miles miscellaneous lands, more or less extensively mineralized, in the Fauske district of Nordland, mainly in the Skjerstad division of Nordland, Tromsö. Lands include the Sulitjelma, Carlotta, Geken and Altens groups of mines. The Sulitjelma, discovered 1875 and opened 1887, which has become the principal copper mine of Norway, shows mica-schist of lower Silurian age, with eruptive flows of greenstone conformable with the schists. Ore bodies occur as extended lenses, very persistent in strike and depth, on the contact of schists with metamorphosed amphibolite and olivine gabbro, lenses having a generally east and west strike, with dip of 10° to 45° with the horizon. There are 18 known ore bodies, of which 15, under development, range 15' to 36' in width, traceable 450' to 2,200', deepest proven to depth of 2,300', carrying exclusively cupriferous iron pyrites, averaging 3% copper, 45% sulphur and 0.5 oz. silver per metric ton.

Development is mainly by tunnel, there being one shaft of 280' depth and 9 tunnels, the names and number of feet of workings of the latter, at end of 1905, being as follows: Ny-Sulitjelma, 8,940'; Hanka Bakken, 1,640'; Giken, 15,800'; Carlotta, 11,100'; Måns-Petter, 2,450'; Bursi, 700'; Koch, 2,740'; Tornerhjelm, 3,000'; No. Nine, 2,160'. The mine has total openings of about 12

miles, showing 2,502,000 metric tons of ore, with 953,000 tons blocked out for stoping, in 1906. Electric underground haulage is used exclusively, with 2 kilometers of track in the mines.

Ores, as mined, are divided into two classes, the first or smelting grade carrying 4 to 8% copper, while the second or export grade carries 1.5 to 4% copper and an average of 45% sulphur, the average tonor of all ores mined being about 3% in copper and 45% in sulphur. Of the sulphur ore exported, about half is fines and half lumps, sent to Helsingborg, Riga, Antwerp, Ghent and various ports in Great Britain.

Equipment includes a 970-h. p. water power plant, 1,220-h. p. electric plant, 780-h. p. air plant and 10-h. p. gasoline plant, with 400 h. p. developed at the mine, 390 h. p. at the mill and 560 h. p. at the smelter. Equipment includes 13 hoists and one Ingersoll-Sergeant, one Burchard and 3 Schramm air-compressors, with an aggregate capacity of 28 drills. There are 25 air-drills and one Temple electric air-drill.

Mine buildings are of wood, the machine-shop having an area of 1,290 square feet, carpenter-shop 1,291 square feet, and smithy 1,722 square feet. There are 2 sawmills, a general store, school, church and Good Templars' lodge, with a large number of dwellings, the company owning a total of 320 buildings.

There is an extensive system of aerial tramways, with 15 stations and 2 power stations, the tram system including a 4-mile line to the Jakobeshakken mine, which is to be operated more extensively in the future.

The concentrator, of wood, area 37,950 sq. ft., is equipped with 8 Blake crushers, a 15' Krupp Grusonwerk centrifugal crusher, 9 rolls, 91 Hartz jigs, 26 Lührig and Ferrari concentrators and 24 vanners. There also is a 1,000-ton Elmore vacuum oil concentration plant, with 12 units, in a separate mill of 10,000 sq. ft. area.

The smelter, at Fagerlid, 2 to 5 miles from the various mines, receiving ore therefrom by aerial trams, has a daily capacity of 160 tons. Equipment includes a 50-ton water-jacket blast-furnace, one reverberatory furnace, two 50-ton pyritic smelting converters of the Knudsen type, and one converter stand, with 10 shells of the Manhes type, taking 7.5 metric ton charges. First-fusion product is a matte of 30 to 40% copper tenor, and final product is blister copper assaying 99.2% in tenor, sent, for refining, to the Helsingborg Kopparverks Aktiebolag, at Helsingborg, Sweden, where there is a leaching plant, in connection with the works. Ores smelted average 6 to 8% copper, 32 to 34% sulphur, 34 to 36% iron and 2 to 4.5% alumina, with traces of lime and magnesia. The smelter uses for conversion the Knudsen discontinuous pyritic process, which largely utilizes the calorific value of the sulphur, and entails small coal consumption, giving very satisfactory results. By reason of improvements made, 1907, the loss of copper in smelting amounts to about 10% only, slags being said to run only 0.2 to 0.3% copper, as against a loss of about 15% formerly, and conversion costs are said to be under \$1 per metric ton.

Miscellaneous enterprises of the Sulitelma include 7 steamers, 2 tugs, 40 barges and a 13-kilometer private railway system, known as the Sulitjelma-banen, of 750 mm. gauge, equipped with 3 locomotives and 120 freight cars.

Fuel consumption and costs were as follows, in 1907: 3,600 cords of wood at the mine and 260 cords at the smelter, costing 10.5 kr. per cord; 1,500 metric tons coke at the smelter, costing 31 kr. per ton; 690 tons coke and 6,620 tons soft coal, costing 18 kr. per ton; 7,400 gallons petroleum.

Production has been as follows: 605 metric tons fine copper and 90,000 tons cupriferous pyrites, exported to sulphur burners, carrying 2,442 metric tons fine copper, in 1904; 447 tons fine copper from 10,479 tons ore smelted and copper exported in pyrites giving a total output of 6,225,856 lbs. fine copper.

in 1905; 589 metric tons fine copper and circa 2,800 tons copper contained in pyrites exported, in 1906; 1,384,486 lbs. fine copper, secured from circa 1,900 tons of ore smelted, and 102,000 metric tons cupriferous pyrites exported, averaging 3% copper, giving gross production of 8,140,562 lbs. fine copper, in 1907. During 1907 the Kaafjord mines, in Alten, produced 4,150 tons cupriferous pyrites, yielding circa 1,050 tons of concentrates, shipped to the Sulitelma for smelting. The management is progressive, and the Sulitelma has by no means reached the limits of its productive capacity, though already much the largest copper producer of Norway, and one of the leading copper mines of Europe, while giving every prospect of increased production for the future.

#### **SULTANA-ARIZONA COPPER CO.**

**ARIZONA.**

Office: 1356 First National Bank Bldg., Chicago, Ills. Mine office: Kelvin, Pinal Co., Ariz. John B. Mecham, president and general manager; Dr. H. W. Pierson, vice-president; C. H. Seamans, secretary and treasurer; preceding officers, W. Esty Curtis, L. G. Bronson, J. W. Nye and John D. Riley, directors; Jerry T. Harrington, resident manager and superintendent; H. C. Erman, consulting engineer. Organized June 5, 1906, under laws of Arizona, with capitalization \$2,500,000, shares \$1 par, apparently as a reconstruction of the National Mining & Development Co. Annual meeting, first Tuesday after first Monday in June.

Lands, 19 claims, 1 patented, area 380 acres, also three 15-acre millsites. Company also reports holdings of 30 acres of gold and silver lands, in the Ures district of Sonora, Mexico.

The Arizona lands, said to have been bought for \$120,000, are in the Riverside district, across the Gila river from Kelvin, including the Riverside and Bryan groups. Property is said to show 7 different veins, which management says probably will unite at depth, of which 5 veins have been more or less developed. Property also is said by company to have 12 copper veins and 4 silver veins. The 5 veins under development are said to be 18" to 6' wide, and are estimated to average 4' 6" width, with a generally NW. and SE. trend, showing the usual oxidized ores above, with sulphide ore, mainly chalcopyrite, in the lower workings. Property is said to show a 4' vein, averaging 15% copper, in the upper levels, and a 6' vein, in the lower levels, carrying chalcopyrite, from which shipments to the Humboldt smelter have returned 8.7 to 10.6% copper. Average tenor of ore of all veins is estimated by company at 10% copper and 4 oz. silver per ton, which is too high.

Development is by 5 shafts, of 40' to 300' depth, and by 7 tunnels, of 50' to 264' length, with various open-cuts, giving a total of circa 3,500' of workings, of which about 1,000' were made during latter half of 1907. Company estimates 40,000 tons of ore in sight, with 30,000 tons blocked out for stoping, and there are several thousand tons of low grade ore, of fair copper tenor, on the dump.

Equipment includes a steam plant with one hoist, and it is planned running a 1-mile aerial tram across the Gila river, to the railway station at Kelvin. Company plans a concentrator, of 200 to 300 tons daily capacity.

Company was said, October, 1907, to have settled its indebtedness, preparatory to resumption, and, early 1908, was making small but regular shipments of ore, of 12 to 20% copper tenor, to El Paso smelter. Some ore was shipped before property was owned by present company.

#### **SULLIVAN-ARIZONA COPPER CO.**

**ARIZONA.**

Letter returned from former office, Joliet, Ills. Mine office: Kelvin, Pinal Co., Ariz. John B. Mecham, president; Chas. W. Seaman, secretary and treasurer. Organized circa March, 1907, with capitalization \$2,000,000, shares \$1 par. Possibly succeeded by Sultana-Arizona Copper Co..

#### **SULLIVAN COPPER DEVELOPMENT CO.**

**ARIZONA.**

Office: Duluth, Minn. Mine office: Paradise, Cochise Co., Ariz. Geo. H.

Crosby, manager. Lands are claims adjoining the holdings of the Manhattan Development Co., in the Chiricahua Mountains. Idle.

**SULLIVAN GOLD & COPPER MINING CO.** **MONTANA.**

Mine office: Kalispell, Flathead Co., Mont. Idle some years.

**SULPHIDE COPPER CO.** **COLORADO.**

Office: P. O. Box 358, Denver, Colo. Mine office: Crested Butte, Gunnison Co., Colo. J. C. Lewis, president; Frank Jerome, vice-president; Geo. S. Ryan, secretary; Geo. N. Wheeler, treasurer; Horace Miller, manager. Lands, in the Rock Creek district, have 75' and 170' tunnels, in argentiferous copper ore. Idle some years.

**SULPHIDE MOUNTAIN MINING & MILLING CO.** **WASHINGTON.**

Office: care of Hon. E. C. Trimble, Seattle, Wash. Mine office: Orient, Ferry Co., Wash. Lands include the Pomeroy mine, on Sulphide Mountain, 10 miles northeast of Orient, in the Colville reserve, opened by sundry open-cuts and a 200' shaft, showing ore giving good assay values in copper, lead, silver and gold. Idle.

**SUMAS MINING CO.** **WASHINGTON.**

Mine office: Sumas, Whatcom Co., Wash. W. W. Jones, president; Mrs. M. Record, secretary. Lands, near the head of Swamp Creek, show auriferous copper ores. Idle several years.

**SUMITOMO COPPER CO.** **JAPAN.**

Office: Kitahama, Higashiku, Osaka, Japan. Mine office: Niihama, Iyo, Shikoku, Japan. Works office: Shisakajima-Ochigun, Iyo, Shikoku, Japan. M. Suzuki, director-in-chief; T. Shidachi and Kinkichi Nakata, directors; R. Fujio, chief auditor; K. Yukawa, manager; Munio Kubo, vice-manager; T. Matsumoto, sub-manager; S. Maki, sub-manager and mine superintendent; T. Hagi, superintendent; Keijiro Nakamura, smelter superintendent.

Lands, 3 claims, area 6,353 acres, also a 5-acre millsite, 33,452 acres timber lands and 575 acres miscellaneous lands, in the Besshi district. Area of the Besshi mine proper, on Besshi Mountain, 4,400' in height, is 209 acres. The timber lands carry large plantations of fir, set out yearly, since 1879, which have become available for mine timber, 15 to 20 years' growth being required. Water supply is taken from the Tokuriu river.

The Besshi mine shows graphitic, chloritic and sericite schists, carrying a bedded deposit of 4' to 10' thickness, with an average of 7', having a strike of N. 30° E. and average dip of 45° NE., traceable 9,000' and proven to depth of 8,000', with workings exceeding 6,000' in length. The bedded vein occurs in alternate layers of chloritic and graphitic schist, each enveloped in a quartz-schist known as "habu," with interstratification of piedmontite schist, step-faults, running east and west, and nearly parallel, giving frequent throws of 10' to 20', with a maximum throw of 50'. The ore is an intimate mixture of chalcopyrite and pyrite, sometimes occurring as partial segregations in pyrite, banded with schist, averaging, as mined, circa 4% copper, brought up, by dressing, to an average copper tenor of about 5.5%.

The Besshi mine, near Kyoto, in the northwestern part of the island of Shikoku, has been in the ownership of the Sumitomo family since its opening, A. D. 1690, and was making more than 3,000,000 lbs. fine copper yearly at the close of the Seventeenth Century, being, at that time, perhaps the largest copper producer of the world. The mine is opened by the Toyen shaft of 1,784' depth, sunk at an incline of 49°, with 9 levels opened, largest production being from the 6th and 7th levels, the shaft connecting on the 8th level, at depth of 1,300', with the new Tonaru crosscut tunnel, of 6,123' length. There are other crosscut tunnels, of 430' and 4,172' length. The mine has a system of natural ventilation, by which hot air from the valley, entering through the Toyen tunnel, escapes through the mouth of the Toyen incline

shaft, near the top of the mountain, the air current being regulated by lattices. The mine is well timbered, with a tram-line on each level, and ore is extracted by overhand stoping, guncotton being used mainly for blasting, with a little dynamite and occasional gunpowder. The mine has electric pumps, pumping water from the lower workings into a large sump on the 8th level, whence it is discharged through the Tonaru tunnel, which is lighted throughout by electricity, and has the terminal station of an aerial tram at its portal. The mine has circa 50,000' of workings, with about 2,500,000 tons of ore blocked out for stoping. The company plans driving a fourth tunnel, of about 2 miles length, and sinking a 1,900' vertical shaft to connect therewith.

Mining equipment includes a 740-h. p. installation having three 200-h. p. hoists, good for 1,200' depth each, 3 Rand air-compressors and 2 Leyner and 3 Schramm air-compressors, with 6 Schramm air-drills and 5 Leyner air-drills. Owing to the method of ore extraction through the tunnel, no exceptionally powerful machinery is required.

As the mine, tunnel, mill and works lie on successive levels, the fullest possible advantage is taken of gravity in all operations, resulting in a great saving of power.

The crushing plant, of wood, built 1906, at the mouth of the Tonaru tunnel, is of 800 tons daily capacity, equipment including one 50-h. p. and two 40-h. p. Blake jaw crushers. Ore assorting is by hand-labor, there being no machinery, otherwise than the crushers.

Owing to complaints by farmers of damage from copper-laden waters, a cementation plant has been installed, and considerable copper is precipitated on scrap iron, the production of regulus amounting to upwards of 200 tons yearly.

Leading from the portal of the Tonaru tunnel is a 3,600-meter Bleichert aerial tram, to Hateba, with longest span of 600 meters, having an hourly capacity of 90 tons, at an average speed of 2.5' per second. At Hateba is the terminus of a railway running to Niihama, the nearest port. The connections between the mine and shipping wharf include the 6,123' Tonaru tunnel, circa 2 miles of aerial tram and 5½ miles of railway, a total of about 5 miles. The mine has 3 aerial trams, of 2,276', 5,200' and 5,178' lengths, respectively.

The company owns 2 private railroads, of 3½ gauge, equipped with 10 locomotives, 10 box-cars and 184 ore-cars.

A hydro-electric power installation, on the Tokuri river, transmits electric energy to the central plant, at Niihama, whence power is distributed to the mine, mill, shops and smelter. The company plans a new hydro-electric installation, to utilize a flow of 30 cubic feet per second, deliverable under a 2,000' head.

The general shops, at Niihama, about midway between the mine and smelter, include a foundry making castings up to 5 tons in weight, extensive carpenter-shops, machine-shops, boiler-shops and smithies, these works not only making ordinary repairs, but turning out a considerable part of the machinery and castings used at the mines, works and smelter.

The Besshi smelter formerly was at Niihama, but, owing to serious damage to neighboring farmers from smelter fumes, the entire reduction plant was transferred, 1906, to the Island of Shisakajima, 12 miles from Niihama, only the general shops remaining at the old smelter site.

The new Shisakajima reduction plant, built at a cost of about 4,000,000 yen, is one of the most modern in existence, both in design and equipment. Ore is received by vessel at a wharf, where unloaded by a 20-ton crane, into cars that are hauled up an incline to the top of the smelting works, cars being

operated in counterbalance. The works are laid out in 7 terraces, gravity being utilized throughout.

The smelter has 786 open stalls, for roasting ore and matte, about one-fourth of the capacity being required for matte, each of the stalls being of 30 tons capacity, roasting of raw ore requiring an average of 30 days. The calcining stalls are connected with a central high chimney. The smelter proper has four 160-ton rectangular water-jacket blast-furnaces, and two 17-ton reverberatory furnaces for refining, one being used as a spare. There also are 4 sets of Atebuki furnaces using an old Japanese process, improved by the Sumitomo company, for the conversion of matte, these having a daily capacity of 32 tons of roasted matte each, one being used as a spare. Product is blister copper averaging 99.8% in tenor, carrying only about 0.015% silver and 0.0003% gold per ton. About 20% of the product is sent to the Osaka rolling mill, owned by the Sumitomo family, and a greater part of the remainder forwarded to Kobe, where it is exported, mainly to Europe. The smelter has three No. 4 and three No. 6 Connerville blowers, for furnace blast, and an air-compressor for the converter department. Barren quartz pebbles are used for fluxing, no silicious ores being available for the purpose.

Fuel used at the mine is coal, and fuel at the smelter is coal, coke and waste gases from coke-ovens. The company has a coking plant, at Niihama, with 72 brick kilns, with a daily capacity of 55 tons, using coal from the Keeki mine, at Kiushiu. Cost of coal is \$2.70 to \$3.50 per short ton, according to grade, and \$4.70 per short ton for coke. Requirements are about 4,725 tons yearly of bituminous coal of best grade and 27,340 tons of ordinary bituminous coal, in addition to coke for the smelter.

The company owns a very extensive fleet of vessels, including 2 steamers for passengers and package freight, 2 tugs, 1 steamer for carriage of coal, and 81 sailing vessels, with 20 sailing vessels held under charter. The company operates a passenger line, with 2 steamers, plying between Niihama and Kobe, a distance of 125 miles.

The company's miscellaneous enterprises are very extensive, including a large number of warehouses and stores, and there is a branch of the Sumitomo bank at Niihama. There is a main hospital with 4 branches, and the company maintains five elementary schools for children of its workmen.

The Sumitomo company employs about 6,000 people, of whom about 10% only are women.

Production was 11,973,833 lbs. fine copper in 1906; 11,674,582 lbs. in 1907 and circa 12,000,000 lbs. in 1908. No copper mine in the world, of its size, has a better smelting equipment than the Besshi, and the management is highly progressive and efficient in all departments.

#### SUNSET COPPER CO.

Letter returned unclaimed from former mine office, Mayer, Yavapai Co., Ariz. Apparently is controlled through stock ownership by, or has been sold outright to, Consolidated Copper Creek Mining Co. Lands, in the Copper Creek district, circa 20 miles east of Mayer, are said to show a vein of 75' width, traceable for several miles, which may be an exaggeration. Has a 50' two-compartment shaft, planned to be sunk 500', with 135-h. p. boiler, hoist and 8-drill air-compressor.

#### BRITISH COLUMBIA.

Letter returned unclaimed from former mine office, Laurier, Ferry Co.,

Google

Wash. Lands show a wide vein of low grade ore, carrying a 4' paystreak giving good assay values in gold and copper. Idle.

**SUMMIT MINING & MILLING CO.**

**WASHINGTON.**

Office: Davenport, Wash. Mine office: Keller, Ferry Co., Wash. C. H. Neal, president; C. A. Gray, secretary. Has a 100' shaft, showing argentiferous and slightly auriferous copper ore, giving assays of about \$60 per ton. Idle several years and apparently moribund.

**SUMPTER SMELTER.**

**OREGON.**

Owned by Oregon Smelting & Refining Co.

**SUN-ANCHOR COPPER MINING CO.**

**WYOMING.**

Mine office: Encampment, Carbon Co., Wyo. L. W. Tennant, president; Geo. Kuntzmann, secretary and treasurer. Capitalization \$1,000,000. Lands, 3 claims, area 60 acres, on Green Mountain, near the Moon-Anchor. Idle several years and presumably moribund.

**SUNDOWN MINE.**

**AUSTRALIA.**

Mine office: Stanthorpe, Southern Queensland, Australia. Lands are on Ballandean Run, circa 20 miles from Stanthorpe. Property includes a tin mine on the western side of Little Sundown Creek, on which work is in progress, also a copper mine that has been idle for several years.

**SUNIK MINES.**

**RUSSIA.**

Mine office: Evlach, Transcaucasia, Russia. Property is in the Zanghezur district, on the Tiflis & Bakn railroad, 30 miles from Evlach and near the Persian line. Ore is mainly chalcopyrite, with occasional bornite, both slightly auriferous and argentiferous, and a little native copper. Property shows a system of 20 known veins, of 7" to 4' width, cutting andesite and diabase, with fault fissures, carrying ore of about 7% average copper tenor, as mined. Development is mainly by tunnel and the workings are of a primitive nature, deepest being about 130'.

**SOCIEDAD COLECTIVA C. y J. SUNDHEIM.**

**SPAIN.**

Office: Huelva, Spain. Mine office: Puebla de Guzmán, Huelva, Spain. Is an incorporated co-partnership between Don Carlos Sundheim de la Cueva and Doña Justa Sundheim de la Cueva. Wm. Guthrie Bowie, manager; Jorge Riecken, mine superintendent. Property includes the Cabezas del Pasto, Sierracilla del Tamujoso and Malagon mines.

The Cabezas del Pasto includes 6 mining concessions, area 104 hectares, with about 300 hectares of adjoining lands, having 12 shafts, deepest 104 meters, with circa 6,000 meters of workings. Ore developed for immediate extraction is estimated at 750,000 tons of pyritic ore and 1,500,000 tons of cupriferous schists. Lenses apparently increase in size with depth. Ore is extracted by overhand stoping, and dry-wallung is used in depleted stopes. Ores carry 1.5 to 5% copper, 40 to 52% sulphur and 40 to 44% iron, and the schists range 0.25 to 30% in copper tenor. All pyritic ore above 1.5% copper, and all schists above 10% copper, are exported. The lower grade ores are lixiviated at the mine, and the washed sulphur ore is exported to France. The mine water carries up to 9 kgms. copper in solution per cubic metre, mostly saved by cementation. The cement copper is washed and classified, best quality averaging 98.5% copper, which is the best grade of cement copper produced anywhere. Mining by overhand-stoping and rock filling is said to prove safer and cheaper than open-cast operations. Surface plant includes Robey hoisting and pumping engines, and the mine has a tramline of 76-cm. gauge, also an aerial tram to the wharves at La Laja, on the River Guadiana.

The Sierracilla del Tamujoso was a small producer under former operators, but ore is complex, requiring special treatment, and the property has been idle for some years.

The Malagon is a group of government concessions, showing good outcrops, with many old workings, but is idle also.

**SUNLIGHT MINING CO.**

Dead. Was merged in Great Belcher of Arizona Co. Formerly at Providence, Yavapai Co., Ariz.

**SUNLIGHT MINING & MILLING CO.**

COLORADO.

Dead. Formerly at Eureka, San Juan Co., Colo.

**SUN & MOON MINING & MILLING CO.**

COLORADO.

Mine office: Idaho Springs, Clear Creek Co., Colo. R. C. Bonney, general manager. Lands carry auriferous and argentiferous copper and lead ores. Has steam and electric power and a 50-ton cyanide plant, employing circa 75 men.

**SUNNY CORNER SILVER MINING CO.**

AUSTRALIA.

Mine office: Sunny Corner, N. S. W., Australia. Is primarily a silver mine, ores carrying an average of 1% copper, copper being used as a carrier for making an argentiferous copper matte. Copper production, when working, was circa 75,000 lbs. yearly. Idle several years.

**SUNNYSIDE COPPER MINING CO.**

WYOMING.

Dead. Formerly at Riverside, Carbon Co., Wyo.

**SUNRISE COPPER CO.**

WYOMING.

Mine office: Sunrise, Laramie Co., Wyo. O. L. Vincent, president; H. P. Jarrad, secretary. Organized, September, 1902, under laws of Wyoming. Lands, about 11 miles from Sunrise, were worked originally for iron ore. The copper ores carry gold and silver values. Mine produced, 1881-1893, ore valued at \$209,282. Idle.

**SUNSET COPPER MINING CO.**

WASHINGTON.

Office: Glens Falls, N. Y. Operating office: Everett, Wash. Letter returned unclaimed from former mine office, Index, Snohomish Co., Wash., September, 1908, at a time when the company claimed to be working 6 men. H. C. McNutt, president and general manager; A. G. Selinghana, secretary and treasurer; W. W. Black, also reported by company as general manager; preceding officers and E. M. Melzger, trustees; B. J. Gallitspa, superintendent; Etienne E. Ritter, engineer. Organized 1897, under laws of Washington, with capitalization \$3,000,000, shares \$1 par, said to have been increased, circa 1906, to \$4,000,000, but company reports, 1908, a capitalization of \$3,000,000 only. Company reported, Sept. 3, 1908, liabilities of \$55,000, with \$5 cash on hand. Annual meeting, second Tuesday in January.

Lands, 36 claims, 18 patented, reported as of 780 acres area, which is impossible, as the area of 36 claims would be only a trifle more than 720 acres. Lands include the Sunset group of 23 claims, well timbered, on the eastern side of the north fork of the Skykomish river, about 5 miles from Index, opposite the Ethel group. The Mountain Side group of 7 claims has circa 400' of tunnels.

The Sunset mine shows granite, carrying parallel fissures, varying, on surface, from mere seams to several feet in width, said to be traceable up to 1,000', the smaller veins being short-lived, and disappearing entirely at shallow depth. The main vein of the Sunset, of 3' to 17' width, is claimed to be richest where widest, carrying mainly auriferous chalcopyrite, at and near surface, and being reported to carry considerable argentiferous bornite at depth, which seems reversing the usual order of things. Gangue is quartz, decomposed at surface, but solid at depth. Company reports ore as averaging 12% copper and 8 oz. silver per ton, with small gold values, but returns from 300 tons of selected ore, sent to the Tacoma smelter, were only 9% copper. Development is by a 596' tunnel, with circa 1,800' of workings.

Equipment includes several small shops, bunk-houses and a small saw.

Digitized by Google

mill. A water power is said to have been developed. The mine is said to have a 6½-mile tram, to Index. Work was begun on a concentrator, at the foot of the tram-line, but apparently the mill was not completed. The ore slimes badly in concentration.

The exceedingly devious methods of promotion followed by this company, under various managements, none good, were fully described in Volumes IV and V. Apparently the present management should not be held responsible for all the lies of its predecessors. Neither company nor property is regarded with especial favor.

#### SUNSET MINING & MILLING CO.

ARIZONA.

Office: 719 Majestic Bldg., Detroit, Mich. Letter returned unclaimed from former mine office, Dos Cabezos, Cochise Co., Ariz. Frederick C. Deinzer, president; Eugene F. Bradt, vice-president; Frank A. Basch, secretary; Hon. Carl Franke, treasurer; preceding officers, Geo. Greening, Edward J. G. Lauer, Fredk. Knorr and Oscar R. Marx, directors; Geo. H. Wilson, superintendent. Organized 1904, with capitalization \$1,000,000, shares \$1 par. Lands, 10 claims, area 200 acres, circa 10 miles from Wilcox, having shafts of 64' and 100', showing argentiferous copper ore. Company sued a Calumet broker for \$20,000 damages for offering stock at 25 cents, when company was asking \$1 per share. Management is composed of men of good standing, the vice-president being a practical and capable mining man.

#### SUNSET NATIONAL MINING CO.

MONTANA.

Mine office: Homestake, Jefferson Co., Mont. R. L. Stevens, manager. Lands, 2 groups, one of 2 patented claims, area 35 acres, and one of 70 acres, about 4 miles north of Homestake, developed by a 250' tunnel, showing ore assaying 5% copper, 4.4 oz. silver and \$3.20 gold per ton.

#### SUPERIOR-ALTA MINING CO.

UTAH.

Office: care of Walter L. Maas, secretary and manager, Salt Lake City, Utah. Letter returned unclaimed from former mine office, Alta, Salt Lake Co., Utah. A. J. Jacobson, president; L. A. Jeffs, vice-president. Capitalization \$300,000, shares \$1 par. Idle several years.

#### SUPERIOR-BONANZA MINING CO.

MEXICO.

Office: Calumet, Mich. Mine office: Ímuris, Magdalena, Sonora, Mex. A. S. Cox, chairman; R. E. Lopez, secretary; Wm. Gmahling, treasurer; John E. Penberthy, consulting engineer; Chas. Hanley, superintendent. Organized March, 1907, with shares \$10 par, as successor of Sonora Bonanza Mining Co.

Lands, 135 hectares of mineral lands, with extensive holdings of miscellaneous lands, circa 35 miles south of Nogales, showing a prominent gossan of 10' average width, traceable 1½ miles, giving quite uniform assays of \$6 to \$7 gold per ton, the underlying vein, of 6' to 10' average width, showing a 3' paystreak carrying argentiferous galena, chalcopyrite and wulfenite, with occasional free gold. Has 2 shafts, of circa 450' depth each, 1 showing at bottom a 12' vein carrying 3 to 5 oz. silver and \$5 to \$10 gold per ton. The San Miguel property, having a broken formation, was idle at last accounts.

Equipment includes steam plant with 3 boilers, 2 hoists, 2 pumps, air-compressor and an electric light plant. Water is secured from a well, and stored in a reservoir. Improvements include a general store, dwellings for workmen, lime-kiln, small brick plant and a small concentrator. Property considered promising.

#### SUPERIOR & BOSTON COPPER CO.

ARIZONA.

Office: Houghton, Mich. Mine office: Globe, Gila Co., Ariz. Wm. G. Rice, president; John H. Rice, vice-president; John R. Pimlott, secretary and treasurer; preceding officers, Hon. Norman W. Haire and George R. Hill, directors; Frank H. Probert, consulting engineer in charge; W. E. Carter, superintendent.

Organized Nov. 23, 1906, under laws of Arizona, with capitalization \$1,500,000, increased, Sept. 5, 1908, to \$2,000,000, shares \$10 par. Had 1,583 shareholders of record, Sept. 15, 1908. Fiscal year ends Sept. 30. State Street Trust Co., Boston, registrar; Boston Safe Deposit & Trust Co., transfer agent. Shares, late 1908, were being listed on the Boston Stock Exchange.

Statement for fiscal year ending Sept. 30, 1908, gave \$225,392 received from assessments Nos. 2 and 3; \$247,610 from sale of additional stock issued; \$1,398.02 from interest, and \$48,341.61 received from sales of ore. Expenditures for the year included \$143,010.20 for development and general expenses, \$25,000 for commission for underwriting the new stock issue, \$17,017.19 for construction and equipment, and \$3,368.10 for patents and miscellaneous expenses, with a \$132,800 payment on lands, leaving a balance on hand of \$292,842.76, of which \$278,690.11 was cash. Accounts payable were \$11,195.56. Purchase price of company's lands was \$365,000, and final payment thereon, \$160,344.20, was made Oct. 15, 1908.

Lands, 45 claims, 19 patented, others in process of patenting, area circa 800 acres, including the Globe & Arizona holdings of 22 claims, bought for \$320,000, and an adjoining group of 21 claims, bought for \$46,000, giving a compact tract, east of and adjoining the Arizona Commercial mine and properties of the Old Dominion. Lands are about 4,200' above sea-level, and circa 800' above Pinal Creek at Globe, hence the mine should not be as wet, at depth, as is the case with the Old Dominion. The property carries ample limestone and iron ore for fluxes. The company also has an option on the Collins-Doyle group of 6 claims, immediately north of and adjoining the Great Eastern mine, which property carries the extension of the Old Dominion vein, and is considered promising.

The property shows Pinal schist, overlaid by circa 600' of quartzite, which, in turn, is covered, conformably, by circa 500' of Globe limestone, showing intrusions of diabase, causing extensive mineralization. The property shows two dominant lines of faulting, the main series, which runs northeast and southwest, including, from north to south, the Old Dominion, Great Western or Black Hawk, Limestone, Quo Vadis, Black Oxide and Iron King faults, or veins, those being intersected, at nearly right angles, by another series of faults, of later origin, apparently but slightly mineralized. Of the veins named, three show ore in commercial quantities.

Work was begun January, 1907, and Oct. 31, 1908, the mine had 6,374' of workings, exclusive of stopes. Assessment work has been done along unusual but highly commendable lines, by sinking 2-compartment shafts, well timbered, at the common end-line of adjoining claims, or, where possible, at the intersecting corners of four claims, thus securing results of actual value for expenditures usually made merely to hold possessory title. Ultimately it is planned to connect the workings, on all veins, by main crosscuts, between the two working shafts, driving crosscuts at vertical intervals of 200', these serving as the main transportation avenues for ores developed, and giving cheap extraction while providing for handling heavy ore tonnages.

The oxidized zone apparently is of 500' to 600' depth, which indicates an extensive zone of secondary enrichment carrying chalcocite and bornite, presumably to be followed by chalcopyrite, at great depth. The leached zone carries mainly carbonate ores, with the bottom workings showing considerable chalcocite, ore increasing rapidly in quantity and copper tenor with depth. The property has all the ores and fluxes required for a good furnace mixture.

The Great Eastern mine, which is the principal property, as developed, and the only producer as yet, has a 420' shaft, made from an old vertical shaft cut down, and is poorly located, hence eventually must be replaced by a larger shaft to the north, but will serve to develop the property to greater

depth, and will suffice for a considerable production. Levels have been opened at depths of 100', 300' and 400', the upper levels showing leached ore, of little commercial importance, but the 400' level has a chute of commercial ore 230' long, from the eastern boundary of the Arizona Commercial, beyond which the vein carries small lenses of commercial ore, at irregular intervals, for 361' in length, these indicating commercial ores at a little greater depth, while on the sub-level, 60' deeper, the ore chute is 320' long, proving that it pitches east on the Superior & Boston, making ground rapidly at depth. On the bottom level considerable chalcocite is shown, on both the foot and hanging walls, chalcocite being found in rapidly increasing proportions, with depth. The Great Eastern mine had about \$500,000 worth of ore developed, September, 1908, and was a producer of about 40 tons of high-grade ore daily, at the end of 1908, stopes being carried only 3 sets high. The Great Eastern mine is not especially wet, but has been given a new Prescott pump, in anticipation of an increased inflow of water at greater depth.

The Limestone shaft is 318' deep, with levels at 100', 200' and 300', the bottom level carrying a 4' footwall streak of commercial ore, each successive level showing an improvement in both width and character of ore, with prospects of large and rich ore bodies at somewhat greater depth.

The Gardner incline shaft, begun Apr. 4, 1908, at the southern end of the property, on the Black Oxide vein, has 3 compartments, each 5x10' in size, timbered with 10x10" timber, and was 435' deep Sept. 30, 1908. Plats have been cut for levels at depths of 100', 200' and 400'. A crosscut, late 1908, was 44' in the Black Oxide vein, without reaching the footwall. The Black Oxide vein apparently is a continuation of the Buckeye fault, on which the Old Dominion has opened extensive mines on the Buckeye, Carrie and True Blue claims. Equipment of the Gardner shaft is temporary, and it is planned to replace it by permanent equipment with capacity for sinking circa 1,000'.

The portal of the Black Oxide tunnel is about 1,000' southwest of the Limestone mine, the tunnel cutting the Black Oxide vein at 670', giving a 400' back, with drifts of 96' and 397', both in the oxidized zone, showing a vein filling of micaceous hematite, carrying up to 2% copper, indicating sulphide ore below, and showing a small chute of shipping ore. The Black Oxide is 280' east of the True Blue mine of the Old Dominion, from which high-grade ore has been mined, by leasers, for several years.

The Iron King vein, parallel with the others, shows a good iron gossan, and has an old 70' shaft, in leached ledge matter.

Equipment includes hoists at each shaft, with 5,000-gallon and 12,000-gallon oil tanks at the Great Eastern mine, petroleum being used extensively for fuel. Buildings include a power-house at the Great Eastern, smithy, warehouse, barn and 12 two-room cottages, for workmen.

The Great Eastern shaft is reached by a 350' spur of the Arizona Commercial Railroad, over which supplies are received and ore shipped.

The company's property has an excellent site for a smelter, easily accessible by a railroad, and with ample water supply available, but further development will be secured before the matter of building a reduction plant is given serious consideration.

Production was begun February, 1908, within thirteen months after the company started work, with shipments to El Paso smelter, and, beginning May 1, 1908, the company shipped circa 1,000 tons of ore monthly, secured mainly from development work, to the Globe and El Paso smelters. For fiscal year ending Sept. 30, 1908, production was 6,624 tons of ore, yielding net, after deduction of smelting and transportation charges, \$48,210.39, an average net return of \$7.28 per ton. Ore produced ranged in copper tenor from 5.4% in February to 10.64% in September, and in silver tenor from 2.8 oz. silver in

February to 7.24 oz. in September, the ore improving steadily in both copper and silver contents. Production for calendar year 1908 was circa 1,350,000 lbs. fine copper. For September, 1908, production was 88 tons blister copper, netting circa \$2,500 above all expenses. In November, 1908, a shipment of 54 tons of ore, from the bottom level of the Great Eastern, returned 12.8% copper and 11.8 oz. silver, and the last shipment of 1908, in December, gave returns of 16% copper and 20 oz. silver per ton, the steadily increasing percentages of copper and silver being due to the great improvement in ore bodies secured at depth.

The company's financial position is notably strong, and the ability of the property to make considerable ore shipments so quickly, from development work, speaks eloquently both for the mine and its management. The Superior & Boston is a property of exceptional promise and has an excellent management.

**SUPERIOR COPPER CO.****ARIZONA.**

Dead. Formerly at Tucson, Pima Co., Ariz. Described Vol. VI.

**SUPERIOR COPPER CO.****MICHIGAN.**

Office: 12 Ashburton Place, Boston, Mass. Mine office: Houghton, Houghton Co., Mich. Quincy A. Shaw, Jr., president; Rodolphe L. Agassiz, vice-president; Geo. A. Flagg, secretary and treasurer; Jas. MacNaughton, general manager; preceding officers, Alex. Agassiz and Francis W. Hunnewell, directors; Jas. Biscombe, superintendent.

Organized July 23, 1904, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par. Is controlled, through ownership of 50,100 shares, bought Dec. 31, 1906, by Calumet & Hecla Mining Co. At end of fiscal year, Apr. 30, 1908, had cash assets of \$155,231, with total liabilities of \$5,846.

Lands, 400 acres, in Section 15, T. 51 N., R. 34 W., between the Baltic and Isle Royale mines, and just east of the Section 16 mine of the Atlantic. The property carries circa 60,000' of the strike of the Baltic amygdaloidal bed, with room for 3 or 4 shafts, and has a light overburden, the lode being proven by trenches, at intervals of 1,000', these showing an amygdaloidal bed of 35' to 40' average width, having extensive carbonate stains, due to weathering, with a little fine copper near surface. Property has been trenched to the Eastern Sandstone.

The mine is opened by 2 shafts, No. 1, at the north, which is the only shaft of importance, being sunk in the footwall, insuring solid ground, but necessitating opening the bed by short crosscuts at each level, and, owing to the great width of the bed, it is necessary to crosscut along the drifts, at 100' intervals. As a rule, the drifts are carried approximately in the center of the bed, with a view to giving a fair average of values. The Baltic amygdaloid, where opened in the Superior, carries copper impregnations in the footwall, always an evidence of strong mineralization, and there is a conglomerate bed, about 20' in the footwall, which carries a small amount of copper. The stamp-rock is remarkably deceptive in its appearance, as the copper oxidizes readily, and rock is of little promise, after broken a few weeks, but shows much stamp-copper on fresh fractures. The mine shows a marked improvement with depth. Owing to an intervening triangle of land, owned by other interests, between shafts Nos. 1 and 2, they cannot be connected until the 12th level is reached.

No. 1 shaft, circa 1,200' south of the northern boundary of the property, and about 1,000' deep, begun drifting on the 10th level December, 1908, this showing a lode up to 95' in extreme width, the shaft having about one mile of workings, at the end of the year. There is an 18' horse of trap on the 6th level, which disappears on the level below. This shaft shows improving values with depth, the bottom levels being the best in the mine.

No. 1 shaft has a frame shaft-rockhouse, of the same type as at Nos. 17 and 18 on the Osceola amygdaloidal bed at the Calumet & Hecla, equipment including a Westinghouse engine and 2 crushers. The hoist, good for depth of 1,500', was taken from No. 20 shaft of the Calumet & Hecla.

No. 2 shaft, 2,540' southwest of No. 1, and circa 2,400' from the southern boundary, sunk circa 40' in the footwall, at an angle of 53°, was 235' deep at the end of 1908. Work was resumed, July, 1908, when the shaft was cut down to 3-compartment size. This shaft has only a temporary equipment, and shows no copper, because sunk in the footwall.

Mining equipment includes a combined boiler and engine-house, with room for 5 boilers, hoist, and 10-drill and 18-drill air-compressors, all in the power-house, the boilers having been brought from the old Calumet & Hecla power plant at Lake Linden.

Buildings include a warehouse, smithy, changing-house, office and a number of dwellings for employees.

No. 1 shaft is connected with the main line of the Atlantic Railway by a 7,000' spur, built 1908.

The Superior has a 2-year lease on 2 heads of the Atlantic mill, giving a stamping capacity of about 700 tons daily. The first mill test, made December, 1908, was on circa 950 tons of rock, remaining after discarding about 40% of rock broken for the test from the breasts of the 4 drifts on the 7th to 10th levels, inclusive, and returned 48 lbs. mineral, equal to 35 lbs. fine copper, per ton, of rock stamped, in addition to which there were heavy tailings losses, amounting to 7 to 10 lbs. of fine copper per ton, which probably can be gradually reduced by adjustment of the washing apparatus at the mill, as the Atlantic plant was devised and adjusted for handling lighter copper. It is not likely that the Superior will average 35 lbs. fine copper per ton, but it gives every promise of making a very fine mine, of the same general class as the Baltic and Champion, opened a short distance southward, on the same lode. The mine is capable of supplying easily 500 tons of stamp-rock daily, and at the end of 1909 should be opened sufficiently to supply 1,000 tons daily.

#### SUPERIOR COPPER CO., LTD.

#### ONTARIO.

Office: 10 Adams Blk., Sault Ste Marie, Ont. Mine office: Superior Mine, via Algoma Central Railway, Algoma, Ont. Employs 258 men. Ralph M. Dyer, president; W. H. Teare, vice-president; F. C. Smith, secretary and general manager; Emory W. Clark, treasurer. Organized Sept. 13, 1901, under laws of Ontario, with capitalization \$1,500,000, increased, 1903, to \$2,000,000, and again increased, 1907, to \$3,000,000, shares \$10 par; issued, \$2,434,120. Levied assessments, to Sept. 1, 1908, of \$52,972.75, and on that date had \$25,872 cash on hand, with \$12,700 liabilities. The company was organized as non-assessable, but stock was rendered assessable by special act of the provincial parliament of Ontario. Annual meeting, second Thursday in June.

Lands, 11 claims, area 800 acres, 8 claims, of 680 acres area, being crown-granted. Property, in an unorganized mining district of Algoma, shows granite and chloritic schists, carrying 2 fissure veins, of 10' and 70' estimated average widths, tracable circa 7,000', opened by shafts of 90', 95', 115', 45', 90' and 400', with about 20 pits and trenches, giving a total of 2,155' of workings, estimated to show 212,000 tons of ore, with same amount blocked out for stoping, which figures seem high. Ore is mainly chalcopyrite, with some chalcocite, having a quartzose gangue, formerly estimated to average 3% copper, 1 oz. silver and \$2.50 gold per ton, but estimated, by present management, to average 4% copper, 1 oz. silver and 40 cents gold per ton.

Equipment includes a 150-h. p. steam plant, with 2 hoists and a 12-drill Ingersoll-Sergeant air-compressor. There are 19 buildings, including an engine-

house, smithy, 20x40' wooden machine-shop, changing-house, boarding-house and dwellings.

The 50-ton wooden concentrator has 2 jaw crushers, 2 rolls, 6 Hancock jigs and 4 Wilfley tables.

The property is connected with the Algoma Central Railway by a 4.2-mile standard-gauge private line, laid with 80-lb. steel rails, and equipped with 1 locomotive and 3 cars.

The mine closed down, August, 1904, and resumed circa 1908. Management plans a 500-ton concentrator. Property considered promising.

#### **SUPERIOR MINING CO.**

Office: El Paso, Tex. Mine office: Lordsburg, Grant Co., N. M. Daniel W. Reckhardt, manager. Lands are in the Shakespeare Range, near Lordsburg. Company begun operations 1899, and in 1900 shipped some ore to El Paso smelter. Was idle at last accounts, but said to plan resumption.

#### **SUPERIOR MINING CO.**

Dead. Formerly at Cerillos, Santa Fé Co., N. M.

#### **SUPERIOR MINING CO.**

Mine office: Bingham Canyon, Salt Lake Co., Utah. J. E. Dow, manager. Lands, 8 claims, adjoining the St. Joe, with workings said to show ore assaying 2% copper, 35.5% lead, 29.6 oz. silver and 60 cents gold per ton. Company is said to plan sinking a shaft on the Lark side of the mountain.

#### **SUPERIOR MINING CO.**

Office: 407 Truax Bldg., West Superior, Wis. Letter returned unclaimed from former mine office, Berlin, King Co., Wash. J. P. Simon, president and treasurer; B. A. Baerlocher, secretary and superintendent; preceding officers and W. D. Dwyer, directors. Organized 1902, under laws of Washington, with capitalization \$2,000,000, shares \$1 par. Lands, 4 claims, area 80 acres, and a millsite, 4 miles south of Berlin, in the Miller River district, opened by a 140' tunnel, showing a 5' to 8' fissure vein, carrying some oxidized copper ores, but mainly auriferous, argentiferous and cupriferous pyrite, with talcose gangue, associated with galena, assaying circa 6% copper, 7 oz. silver and \$1 to \$30 gold per ton. Idle for some years, except for annual assessment work.

#### **SUPERIOR MONTANA COPPER MINING CO.**

Office: 604 Rookery Bldg., Spokane, Wash. Mine office: Superior, Missoula Co., Mont. Employs 6 men. L. G. Nash, president; W. P. Smith, vice-president; S. A. Matthews, secretary and treasurer; D. A. Buchanan, general manager; L. P. Audrle, superintendent; preceding officers are the directors; W. M. Stephen, engineer. Organized July 1, 1907, under laws of Washington, with capitalization \$1,500,000, shares \$1 par; issued, \$175,000. Reported \$11,500 on hand Sept. 18, 1908. Annual meeting, August 15th.

Lands, 12 claims, unpatented, area 230 acres, 2 miles from Superior and one mile from C. M. & St. P. Railway, in an unorganized district of Missoula county, showing 2 ore bodies in diabase, of 35' estimated average width, traceable 7,500', carrying auriferous chalcopyrite and pyrite, estimated to average 7.3% copper, 6 oz. silver and \$14.67 gold per ton, with a trace of lead. Development is by shafts of 30' and 70', and a 220' tunnel, with 1,260' of workings, estimated to block out 171,000 tons of ore for stoping, which estimate is excessive. Has 4 mine buildings. Company plans continuous development, building a sawmill and a one-mile aerial tram, installing a plant with steam power, air-compressor and hoist, and building a concentrator. Property considered promising.

#### **SUPERIOR & MONTANA MINING CO.**

Office: 317 Quincy St., Hancock, Mich. Mine office: Alta, Salt Lake Co., Utah. Edw. Ulseth, president; Chas. Chynoweth, vice-president; W. Frank James, secretary; John Holman, treasurer; preceding officers, Michael Foley,

UTAH.

Digitized by Google

Thos. Bastian and John J. Leserve, directors; Anthony O. Jacobson, manager. Organized circa February, 1907, with capitalization \$3,000,000, shares \$5 par.

Lands, circa 90 acres, known as the Columbus-Wedge group, near the Columbus Consolidated, supposed to carry the Howland contact of the latter, and the fissure system of the South Columbus, having a 100' shaft showing good ore.

Montana lands, 7 claims, area 140 acres, well watered and timbered, held under bond and lease, circa 25 miles from Red Rock, Beaverhead county, Montana, showing veins interbedded in gneiss, carrying azurite and malachite, with quartz gangue. A vein of about 30" width, opened by a 90' shaft, gave ore assaying 0.75 to 5.75% copper, from 1 to 3.4 oz. silver, and up to 10.3 oz. gold per ton. The Montana lands probably will be surrendered.

#### **SUPERIOR & NEVADA GOLD MINING CO.**

**NEVADA.**

Office: 221 Breunig Blk., Superior, Wis. Mine office: Searchlight, Lincoln Co., Nev. Hon. W. E. Hailey, president; D. N. Morgan, vice-president; L. Thomas, treasurer; B. J. Thomas, secretary; G. W. Huntington, general manager. Organized July, 1906, under laws of Arizona, with capitalization \$1,500,000. Lands, 4 claims, area 80 acres, at Searchlight, known as the King Solomon group, slightly developed by tunnel, said to carry a 5' vein, showing argentiferous and auriferous copper and lead sulphides, with silicious gangue, assaying circa 7% copper and 2 oz. gold per ton. Also has 4 claims, area 80 acres, at Crescent, Lincoln county, Nevada, apparently undeveloped.

#### **SUPERIOR & PITTSBURG COPPER CO.**

**ARIZONA.**

Office: Calumet, Mich. Mine office: Bisbee, Cochise Co., Ariz. Employs circa 750 men. Chas. Briggs, president; Capt. Jas. Hoatson, first vice-president; Capt. Thos. Hoatson, second vice-president; Louis W. Powell, third vice-president and general manager; Peter Ruppe, treasurer; Gordon R. Campbell, secretary; preceding officers, Thos. F. Cole, Geo. E. Tener, Chas. d'Autremont, Jr., Chester A. Congdon and Henry B. Rea, directors; H. B. Paull, auditor. Organized June 30, 1906, under laws of Minnesota, with capitalization \$20,000,000, shares \$10 par; issued, \$15,000,000. Company was formed as a merger of the Calumet & Pittsburg Mining Co., Junction Mining Co., Pittsburg & Duluth Mining Co. and Lake Superior & Pittsburg Mining Co. Company ended 1908 owing the Calumet & Arizona circa \$1,000,000, borrowed money. Quick assets, Jan. 1, 1908, were \$759,150.50, with liabilities of \$1,275,087.66, giving a balance of liabilities, in excess of quick assets, of \$515,937.16. Company and its predecessors have expended about \$12,000,000 on lands, development and equipment.

Lands, 100 claims, patented, largely fractional, area 1,354 acres, including 44 claims, area 029 acres, formerly held by Lake Superior & Pittsburg; 21 claims, area 325 acres, formerly held by Calumet & Pittsburg; 17 claims, area 215 acres, formerly held by Pittsburg & Duluth, and 18 claims, area 185 acres, formerly held by the Junction. The major portion of the Junction tract is covered by Bisbee conglomerate, flanked on either side by porphyry and limestone.

The property shows extensive areas of leached ore, predicated large bodies of rich ore at depth, as in the adjoining Calumet & Arizona and Copper Queen mines. The Superior & Pittsburg has many large and promising ore bodies, with much barren ground, but early efforts were partially mistaken, as very little good ore has been shown in the upper workings, though fine ore has been developed, considerably deeper than anticipated, but the work required to get it was well worth the trouble. The mine made 23,332' of new openings during 1907, and is drained entirely through the Junction shaft. The property, as a whole, has 5 main shafts, which are connected with each other, and with the shafts of the Calumet & Arizona.

The Cole shaft, formerly known as No. 2 Lake Superior & Pittsburg, was sunk nearly 1,000' by the former owners, and was cut down to 3-compartment size, 8x24' in outside measurement, and retimbered, by the present management, work being begun, simultaneously, on 10 levels, and performed in record-breaking time. This shaft was 1,480' deep at the end of 1907, and apparently was not deepened, 1908. The Cole shaft also affords the principal avenue of ore extraction from that part of the mine formerly owned by the Pittsburg & Duluth. The shaft shows considerable ore bodies on the 900', 1,000' and 1,100' levels, ore improving with depth. This shaft has Prescott and Cameron station pumps, caring for a flow of 225 gallons per minute, and, at the end of 1908, was shipping 7 carloads of ore daily.

Equipment at the Cole shaft includes an 800-h. p. steam plant, burning petroleum, and a 16-drill air-compressor. There is a 16x42" Nordberg quadruple-cylinder incline-frame double-drum hoist, capable of raising 12-ton loads from a half-mile depth, hoisting 3-deck cages carrying 3-ton cars, operating in balance, or singly, as desired, and the engine can be altered to hoist from a depth of 2,500'. Buildings at the Cole shaft include a framing-mill, smithy, office and changing-house.

No. 1 Lake Superior & Pittsburg shaft is a relic, left by former owners, of no particular use to the present company, the shaft being of small size and shallow depth.

No. 3 Lake Superior & Pittsburg shaft, 1,000' deep, is on the Uncle Sam claim, south of the Cole shaft, and has been idle several years.

The Briggs shaft, 1,271' deep at the end of 1907, is circa 2,000' south of the Junction shaft, and about 3,000' east of the Lowell shaft of the Copper Queen. This shaft shows tremendous bodies of the leached ore that has been found capping the big ore bodies of adjoining mines. The first level, at 910', shows 600' of good ore. The Briggs shaft has an 8" air-line, and two 12" water-columns, with 3 pumps.

Equipment at the Briggs shaft includes a steel gallows-frame, and a power plant, installed 1906, having 7 boilers, 5 of 250-h. p. each, burning crude petroleum, with a powerful hoist and an 18-drill Sullivan straight-line air-compressor.

The Hoatson shaft, on the Del Norte claim, circa 2,500' from the Briggs shaft, has 4 compartments, and was 1,427' deep at end of 1907, collar being 150' higher than that of the Junction shaft. This shaft shows tremendous bodies of leached ore, with some cuprite and other oxidized ores, on the 12th level, and in the bottom workings carries high grade oxides and sulphides, similar to those found in the Lowell shaft of the Copper Queen. At the end of 1908 stations were being cut, on the 1,400' and 1,500' levels, and the Hoatson shaft was producing, daily, 2 carloads of oxidized ores, and 6 carloads of sulphide ores. There is a 1,000-gallon pump on the 1,300' level.

Equipment at the Hoatson shaft includes a 50' gallows-frame and a double-drum hoist, good for 1,500' depth. The power plant has 6 boilers, and there is a framing mill, which is a duplicate of that at the Oliver shaft of the Calumet & Arizona.

The Congdon shaft, developing the Pittsburg & Duluth tract, on the Black Bear claim, only 650' from the Calumet & Arizona mine, is 1,267' deep, and out of commission, as the territory can be worked to better advantage through the Cole shaft. The Congdon shaft has a 1,000-gallon pump, in a station on the 1,000' level. Surface equipment includes a 300 h. p. steam plant, with a 12x36" double-drum hoist and a 5-drill straight-line air-compressor.

The Powell shaft was begun, late 1908, on the line of the Hope and Wagner claims of the Calumet & Arizona, on ground formerly owned by the Pitts-

burg & Duluth. Equipment includes a Hendrie & Bolthoff double-drum hoist, Sullivan air-compressor and two 75-h. p. Atlas boilers.

The 4-compartment Junction shaft, 1,535' deep at the end of 1908, is sunk on the boundary line of the Calumet & Pittsburg and Junction tracts. The 1,300' level shows a great deal of ore assaying up to 9% copper, and the 1,400' level, at the end of 1908, showed ore assaying above 11% copper, supposed to be a continuation of the ore body on the 1,300' level of the Hoatson shaft. The Junction was shipping, at the end of 1908, from both the 1,300' and 1,400' levels.

The entire mine is drained through the Junction shaft, which also has to assist in unwatering adjoining properties. The pumping station on the 1,200' level has pumps of 4,500 gallons capacity per minute, and handles the water of the entire mine. A pumping station on the 1,500' level, completed late 1908, has a 2,500-gallon Prescott pump, transferred thereto from the 1,200' level.

The Junction has a 75' steel gallows-frame, planned for 5 compartments. The power plant includes a 16x42' Nordberg 4-cylinder incline double-frame hoist, good for 1,500' depth, which is a duplicate of that at the Cole shaft. There also are 12x14" and 12x15" auxiliary hoists, and 2 cross-compound air-compressors, of 12 drills aggregate capacity, with ten 250-h. p. marine boilers, and three 5,000-gallon tanks for storage of petroleum. There is a large machine shop at this shaft.

The property is served by the El Paso & Southwestern Railway, which reaches all the main shafts and shops of the mine.

Ore is smelted by the Calumet & Arizona, a sister company. Production, 1906, was 9,084,875 lbs. fine copper, 32,564 oz. silver and 143 oz. gold, the precious metals, valued at \$21,941, amounting to average of \$4.80 per ton of finished copper. Production, 1907, was 111,710 tons of ore smelted, returning 9,691,405 lbs. fine copper and 55,164 oz. silver, with a small amount of gold, the precious metals returning \$33,401.20, equal to \$6.90 per ton of copper.

Despite the great cost of developing this mine, and the unusual length of time taken, it is a valuable property, of much promise, though it has taken much more time and money to open than anticipated by anyone, at the start. The management is excellent.

#### **SUPERSTITION MOUNTAIN MINING CO.**

**ARIZONA.**

Mine office: Florence, Pinal Co., Ariz. Geo. Woodbury, superintendent. Lands, 30 claims, circa 30 miles north of Florence, showing promising copper outcrops.

#### **SURE THING GOLD-COPPER MINING & SMOLETING CO. WASHINGTON.**

Dead. Succeeded, circa 1905, by Clipper Mining Co. Formerly at North Bend, King Co., Wash. Described Vol. V.

#### **SURPRISE EAGLE MINING CO.**

**MONTANA.**

Office: Silver Bow Blk., Butte, Mont. Mine office: Boulder, Jefferson Co., Mont. T. D. Thomas, president and general manager; Jas. W. Roe, vice-president; Sidney E. Roberts, secretary. Capitalization, \$1,500,000. Lands, 2 claims south of the Elkhorn mine, and 4 claims south of the Baltimore mine.

#### **SUTTON MINING CO.**

**NEW MEXICO.**

Office: Elgin, Ills. Mine office: Lordsburg, Grant Co., N. M. R. A. Fritz, manager. Property is the Last Chance mine, in the Pyramid district, having a 100' shaft showing a 7' vein carrying gray copper.

#### **SVANO COPPER & SULPHUR MINES (NORWAY), LTD.**

**NORWAY.**

Office: Gresham House, Old Broad St., London, E. C., Eng. Organized June 22, 1907, under laws of Great Britain, with capitalization £15,000, in 25,000 preferred and 5,000 deferred shares, of 10s. par each. Was organized to

acquire a mining concession on the island of Svanöen, on the southwestern coast of Norway. Presumably idle.

**SWAKOPMUNDER MINEN-****GERMAN SOUTHWEST AFRICA.****GESELLSCHAFT.**

Office: Schellingstrasse 4, Berlin, W9, Germany. Mine office: Corob, via Swakopmund, German Southwest Africa. Capitalization 36,000 marks. Property is sundry slightly developed copper prospects. Idle and presumably moribund.

**SWANSEA CONSOLIDATED MINING CO.****UTAH.**

Office: Provo, Utah. Mine office: Eureka, Juab Co., Utah. Jesse Knight, president. Organized circa June, 1908, under laws of Utah, with capitalization \$1,000,000, shares \$1 par, as a merger of the Swansea and South Swansea Mining companies.

**SWANSEA EXTENSION MINING CO.****UTAH.**

Office: Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. A. L. Thomas, president; Hon. O. W. Powers, vice-president; Heber M. Wells, secretary and treasurer. Organized circa June, 1908, under laws of Utah, with capitalization \$100,000, shares 10 cents par.

**SWANSEA MINING CO.****MEXICO.**

Dead. Lands sold, September, 1905, to Ronquillo Copper Co. Formerly at La Cananea, Arizpe, Sonora, Mex.

**SWARTHMORE CONSOLIDATED MINING CO.****COLORADO.**

Office and mine: Eldora, Boulder Co., Colo. Employs 10 to 70 men. Chas. B. Galbreath, president; Harvey Hanes, vice-president; J. E. Carpenter, secretary; Paul Barriclow, treasurer; H. H. Carpenter, general manager. Organized July, 1907, under laws of Colorado, with capitalization \$3,500,000, shares \$1 par; issued, \$3,000,050, as a merger of the Swarthmore Copper Co. and Enterprise Mining Co.

Lands, 17 claims, 11 patented, area circa 60 acres, in the Grand Island mining district of Boulder and Gilpin counties. Property includes the Golden Fleece mine, having 2 ore bodies under development, one, of 8' estimated average width, carrying auriferous and argentiferous chalcopyrite, calaverite and sylvanite, the copper ores being estimated to average 3 to 5% copper and 3 to 4 oz. silver, with fair gold values. Milling ore is estimated to carry \$10.84 and smelting ore \$24 per ton, in average metallic values. Development is by 5 shafts, deepest 403', and by tunnels of 800', 1,000' and 2,000', estimated to give 63,000 tons of ore blocked out for stoping. Equipment includes two steam plants, one with a 60-h. p. hoist and 12-drill air-compressor. There are 4 new mine buildings.

**SWARTHMORE COPPER CO.****COLORADO.**

Dead. Merged, circa 1907, in Swarthmore Consolidated Mining Co. Formerly at Eldora, Boulder Co., Colo.

**SWASTIKA COPPER CO.****ARIZONA.**

Office: Long Beach, Cal. Mine office: Jerome, Yavapai Co., Ariz. N. Pike, president; Walter Thompson, vice-president; T. C. Jordan, secretary. Organized December, 1907, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par, as successor of Long Beach & Arizona Mining Co. Reorganization was said to have been effected to eliminate certain stock interests, on account of an alleged illegal stock issue.

Lands, 10 claims, including 3 held under bond and lease, circa 10 miles south of Jerome, carrying auriferous copper ore, opened by a 150' tunnel and shafts of 150' and 250'. The Rawhide group, 7 claims, near Yaeger Cañon, 8 miles southwest of Jerome, is opened by shafts of 150' and 165'. Idle since November, 1907.

**SWASTIKA COPPER MINING CO.****MONTANA.**

Office: Missoula, Missoula Co., Mont. Mine office: Superior, Missoula Co., Mont. Employes 8 men. Thos. N. Marlowe, president; J. W. MacDonald, vice-president and general manager; Geo. E. Marlowe, secretary; Thos. N. Marlowe, treasurer; E. P. Kribs, engineer. Organized July, 1907, under laws of Montana, with capitalization \$150,000, shares 10 cents par; fully issued.

Lands, 10 claims, unpatented, area 200 acres, and a 5-acre millsite, well timbered, in the Carter district, showing 2 parallel veins, of 6" to 8" in width, traceable one-half mile, carrying pay streaks of 2" to 4", containing malachite, bornite and chalcopyrite, said to give assays of 17 to 32.5% copper, 1 to 2 oz. silver and from a trace to \$6.40 gold per ton, and estimated, by company, to average 35% copper, 112 oz. silver and \$6.40 gold per ton. Development is by tunnels of 60', 160' and 270', with 12 trenches. Company plans continuous development.

**SWASTIKA COPPER & SILVER MINING CO.****ARIZONA.**

Office and mine: Tucson, Pima Co., Ariz. W. K. Royce, president; D. H. Cochran, vice-president; J. S. Hopley, secretary; J. M. Ormsby, treasurer. Capitalization \$1,500,000, shares \$1 par. Lands, 24 claims, unpatented, including the Swastika group of 14 claims and the Calendar group of 10 claims, circa 3 miles south of Olive camp. The Swastika group carries silver-lead ores and the Calendar group silver-copper ores. Has 360' of workings, and employs horsepower.

**SWEDEN COPPER CO.****WASHINGTON.**

Dead. Merged, circa 1903, in Mt. St. Helens Consolidated Mining Co. Formerly at Spirit Lake, Skamania Co., Wash.

**SWISHELM DEVELOPMENT CO.****ARIZONA.**

Mine office: Benson, Cochise Co., Ariz. Lands, 40 claims, in the Swishelm Mountains. Idle and presumably moribund.

**SWISS GIRL MINING CO.****ARIZONA.**

Dead. Lands sold, circa 1901, to Baumana Copper Co. Formerly at Dewey, Yavapai Co., Ariz.

**SYCAMORE MINING, SMELTING & DEVELOPMENT CO.****ARIZONA.**

Office: Fort Worth, Tex. Mine office: Jerome, Yavapai Co., Ariz. C. G. Stover, president; H. Martin, vice-president and superintendent; W. P. Williams, secretary and treasurer; preceding officers, Henry O'Toole, H. Brown and C. R. Knutson, directors; Max Winchel, foreman. Organized under laws of Arizona, with capitalization \$1,000,000, shares \$1 par.

Lands, on the Verde River, are distant from Jerome 4 miles in an air-line, and 13 miles by wagon road. Mine has a 325' two-compartment shaft, bottomed in low grade chalcopyrite, assaying 1 to 3% copper, which probably will be abandoned by reason of trouble from gases and foul air. Has secured ore assaying 7% copper, 6 oz. silver and \$18 gold per ton. Equipment includes necessary mine buildings and a good steam plant. Was diamond drilling at last accounts.

**SYLVANIA GOLD & COPPER MINING & MILLING CO.****WYOMING.**

Dead. Formerly at Centennial, Albany Co., Wyo.

**SYNDICATED DEEP MINES, INC.****WASHINGTON.**

Office: Spokane, Wash. Mine office: Republic, Ferry Co., Wash. L. W. Anderson, president; M. J. Costello, vice-president; J. E. McFarland, secretary and treasurer; J. L. Harper, general manager and chairman executive board; Neil Cochrane, superintendent. Organized September, 1907, under laws of Washington. Lands include the Lone Pine-Surprise and Pearl Consolidated mines, also a bond and lease on the Manila mine, which is said to show considerable copper. Property was reopened and shipments to Granby smelter begun, March, 1908. Plans sinking shaft to depth of 1,000'. *Digitized by Google*

**SYNDICATED DEEP MINES, INC.****WASHINGTON.**

Office: Wallace, Idaho. Mine office: Saltese, Missoula Co., Mont. Organized 1906, with capitalization \$1,500,000, shares \$1 par. Lands, 6 claims, circa 6 miles northwest of Saltese. Presumably idle.

**TABATACACHI MINING CO.****MEXICO.**

Mine office: Moctezuma, Sonora, Mex. R. O. Fife, superintendent. Has auriferous and argentiferous copper ores.

**TABLAS-FINANA COPPER CO., LTD.****SPAIN.**

Dead. Voluntarily wound up, December, 1901. Formerly at Tablas, Granada, Spain.

**TABLE MOUNTAIN COPPER CO.****ARIZONA.**

Letter returned unclaimed from former mine office, Kelvin, Pinal Co., Ariz. Is controlled by Arimex Consolidated Copper Co., through ownership of 85% of stock issue. Lands, 27 claims, in the Bunker Hill district. Long idle and of small promise.

**COMPAÑIA MINERA EL TABOR y ANEXAS.****MEXICO.**

Office: Mexico, D. F. Mine office: Asientos, Ocampo, Aguascalientes, Mex. Antonio Morffin, president; Bruno Newman, manager. Has secured ore assaying up to 43% copper, with good silver and gold values.

**SOCIEDAD BENEFICIADORA DE METALES DE TACNA.****CHILE.**

Works office: Tacna, Tacna, Chile. Organized Jan. 10, 1901, under laws of Chile, with capitalization 68,250 pesos, shares 250 pesos par. Property is a smelter, which, in 1903, treated 4,066 metric tons of ore, producing therefrom 731,960 kilograms of ejes averaging about 50% copper tenor, carrying 806,839 lbs. fine copper.

**TACOMA CO.****BRITISH COLUMBIA & WASHINGTON.**

Office: Tacoma, Wash. Mine offices: Van Anda, Texada Island, B. C., and Darrington, Snohomish Co., Wash. A. Grant, general manager. Capitalization \$3,000,000, reduced from \$5,000,000. Paid a \$35,000 dividend, Apr. 2, 1907.

Lands include a gold-copper mine at Darrington, idle for several years, 208 acres of iron ore lands on Redonda Island, British Columbia, 4,000 acres of lands carrying coke and coal in Washington, and the Marble Bay mine, area 640 acres, crown-granted, which was bought for \$150,000. Profits from the mine are said to have paid for the property in 3 years. Mine, about one-fourth mile from the Cornell and Copper Queen mines, has ores of similar character and occurrence, found mainly in large chutes, carrying argentiferous bornite and chalcopyrite, averaging circa 5% copper, 2 oz. silver and \$1 gold per ton. Development is by several tunnels and shafts, main shaft being 860' deep, with 10th level, opened at bottom, showing auriferous bornite of good tenor in both copper and gold, values increasing with depth. Shaft has a 90' gallows-frame, with steam and electric power.

A concentrator, of 150 tons daily capacity, is connected by a 2,125' aerial tram with ore bunkers on Sturt Bay, but has been idle several years, ore being hand-selected on sorting tables, before shipment. The Marble Bay property includes a limestone quarry and 4 kilns, with daily capacity of 300 barrels of lime. Mine employs 60 men, and in 1907 shipped 6,237 tons of ore, carrying circa 600,000 lbs. fine copper, production being only about 60% of normal because of a miners' strike and low price of copper. Mine considered valuable and management good.

**TACOMA SMELTING CO.****WASHINGTON.**

Office: 71 Broadway, New York, N. Y. Works office: Tacoma, Pierce Co., Wash. Employs 675 men. W. R. Rust, president, treasurer and general manager; Edw. Brush, vice-president; D. Craig, secretary; F. W. Clark, assistant manager; L. J. W. Jones, general superintendent; preceding officers and

E. B. Braden, directors; T. R. Wilkinson, refinery superintendent; Roger Taylor, assistant superintendent copper smelter; R. F. McElveney, assistant superintendent lead smelter.

Organized 1898, under laws of Washington, with capitalization \$500,000, shares \$1 par. Is controlled, through stock ownership, by American Smelters Securities Co.

Lands include an extensive and well located smelter site, 6 miles from Tacoma, on Puget Sound. The property is on tidewater, and tidal flats are being reclaimed, by filling in with slag. There are extensive wharves, with ore-bunkers and automatic devices for unloading cargoes, a small electric tram-line connecting the wharves with all departments of the works.

The smelter, of 1,200 tons daily capacity, built originally of 300 tons capacity, for lead ores only, now treats lead mattes, and copper, lead, silver and gold ores and concentrates from the entire western coast of North America, and even does a considerable business on South American ores.

The smelter has three 60-ton mechanical roasters, and two 10-ton hand-roasters, in addition to which a limited amount of ore is heap-roasted. There are 6 blast-furnaces, including four 100-ton stacks, used for lead smelting, and a 400-ton water-jacket blast-furnace for copper, 42x160" at the tuyeres, with forehearth 14' in diameter and 4' high, holding 60 tons of molten matte. A 36" cupola remelting furnace, with outside settler, can treat 75 tons of 50% matte daily. The reverberatory furnaces are of 350 tons daily capacity, and there is a circular slag-casting machine, having 144 tilting molds. The 1,000' dust-flues of the blast and reverberatory furnaces lead to a 306' stack, of reinforced concrete.

The converter department, equipped with a 30-ton electric traveling crane, has 2 stands and six 72x100" shells, of barrel type.

The works include a 35-ton electrolytic refinery, having a 20-ton electric traveling crane, for handling anodes and cathodes.

The works use electric power mainly, a 40,000-volt current, transmitted to the works, being stepped down, at the plant, to 100 volts, for use. The works require about 2,000 electric h. p., and fuel is petroleum, brought from the oil fields of southern California in tank steamers. The lead furnaces have blast furnished by 3 Connersville blowers, driven by a 200-h. p. Westinghouse induction motor.

The management of the Tacoma smelter is progressive, and the metallurgical practice good, this being one of the most important custom smelters on the Pacific coast.

#### TADERGOUNT MINE.

ALGERIA.

Mine office: Takitount, Philippeville, Algeria. Is owned by Stora, Fietta et Cie. Property carries veins of tetrahedrite, presumably argentiferous, also oxidized copper ores in schist and limestone. Mine, slightly developed, has been abandoned at various times, owing to excessive inflow of water. In 1905, with a force of 30 men, produced 150 tons of ore, sent to St. Louis de Rhône, France, for smelting.

#### TAKARA MINE.

JAPAN

Office: Takara-mura, Minami-tsurugori, Kai, Japan. Production has been as follows: 417,123 lbs. fine copper in 1903; 541,065 lbs. in 1906, and 327,266 lbs. in 1907.

#### TAKILMA SMELTING CO.

OREGON.

Office: P. O. Box 1487, Colorado Springs, Colo. Works office: Takilms, Josephine Co., Ore. Chas. L. Tutt, president; K. R. Babbitt, vice-president; J. A. Hull, secretary and treasurer; Geo. Crerar, manager; C. J. Murphy, superintendent. Organized under laws of Colorado, with capitalization \$250,000, shares \$10 par.

Lands, 175 acres, 160 acres patented, also a 160-acre smelter site, with total holdings of 335 acres, in the Waldo district, including the Queen of Bronze and Cowboy mines. The mining property shows diorite and serpentinc, carrying several veins, with north and south strike, of which 3 are more or less developed. The company has a sawmill.

The Queen of Bronze mine carries heavy auriferous copper sulphides, said, by a former management, to assay 12 to 60% copper, which figures would undoubtedly be cut heavily by the present owners. Development is by a 150' shaft, and by tunnels of 200', 640' and 150', with several thousand feet of workings, estimated, 1906, to show circa 20,000 tons of oxidized and sulphide ores, giving average assays of circa 8% copper and \$2.50 gold per ton, with some ore up to 50% in copper tenor.

The Cowboy mine, developed by a 310' tunnel connecting with a 160' incline shaft, carries mainly oxidized ores.

The smelter, at Takilma, receiving ore by wagon and tram-line, has a 125-ton water-jacket blast-furnace, making matte averaging 45% copper, 2.5 oz. silver and \$2.50 gold per ton, shipped to the Tacoma smelter for refining. The fuel supply is somewhat uncertain, and in 1907 the works imported Japanese coke, packed in 100-lb. bags.

Owing to heavy rains in fall and winter, causing impassable roads, the smelter is worked only in summer, the nearest railroad point being Grants Pass, 42 miles distant. During the active season 60 teams are employed, to haul out matte and haul in coke and supplies.

Production, 1905, was 7,543 tons of ore smelted, yielding 1,563 tons of matte, of about 45% copper tenor, indicating average returns of 8% copper from ore smelted. Production, 1907, was 499,662 lbs. fine copper. The management is good, and with rail connections, very badly needed, the property should become of some importance.

#### TALISMAN MINING CO.

UTAH.

Dead. Former office was at Salt Lake City, Utah, with officers as follows: T. B. McKeon, president; Jas. Ingebretzen, vice-president; J. W. Stringfellow, secretary and treasurer; preceding officers and Frank Knox, directors. Was organized 1906, with capitalization \$300,000, shares \$1 par. Lands were 11 patented claims, carrying mainly silver and silver-lead ores. Was merged, October, 1908, in Cedar-Talisman Consolidated Mines Co. Formerly in Beaver county, Utah.

#### TALLAPOOSA COPPER MINES.

GEORGIA.

Dead. Succeeded, Jan. 24, 1905, by Georgia & Tennessee Copper Co. Formerly at Temple, Haralson Co., Ga.

#### COMPANIA DE MINAS Y BENEFICIADORA DE TALTAL.

CHILE.

Office: Valparaiso, Chile. Mine office: Taltal, Antofagasta, Chile. Organized May 31, 1902, under laws of Chile, with capitalization 500,000 pesos, shares 10 pesos par.

#### TALTAL RAILWAY CO., LTD.

CHILE.

Office: 32 Great George St., Westminster, London, S. W., Eng. Works office: Taltal, Antofagasta, Chile. Organized circa 1907, as successor of Pacific Smelting Co., Ltd.

Lands, in the Canchas district, 30 miles from Taltal, carry a fissure vein of circa 40" width, showing carbonate copper ores, with ferruginous gangue, the property being but slightly developed, at last accounts.

The smelter, rebuilt and blown in March, 1904, is served by the Taltal railway, a spur of which enters the works, the main line of which runs near the mine. The smelter has revolving calciners, an 80-ton water-jacket blast-furnace, 30x72" at the tuyeres, 2 reverberatory furnaces, and a casting furnace. Production, 1905, under old management, was circa 3,700,000 lbs. fine copper.

**TALYSARN COPPER MINES, LTD.****WALES.**

Mine office: Nantlle Vale, Talysarn, Carnarvon, Wales. Organized Feb. 23, 1907, under laws of Great Britain, with capitalization £60,000, shares £1 par.

**TAMA MINE.****CORSICA.**

Mine office: Bastia, Corsica. In 1906 produced 385 tons of sulphide copper ore, shipped to Great Britain for reduction.

**TAMARACK JUNIOR MINE.****MICHIGAN.**

Owned by Osceola Consolidated Mining Co.

**TAMARACK MINING CO.****MICHIGAN.**

Office: 303-199 Washington St., Boston, Mass. Mine office: Calumet, Houghton Co., Mich. Works office: Hubbell, Houghton Co., Mich. Employs circa 1,500 men. Albert S. Bigelow, president; Hon. Norman W. Haire, vice-president and general manager; Wm. J. Ladd, secretary and treasurer; preceding officers, Edw. S. Grew, J. Henry Brooks, Jos. S. Bigelow and David N. Anthony, directors; Wm. J. Uren, general superintendent; John T. Been, assistant superintendent; Chas. D. Hohl, chief engineer; John T. Reeder, general clerk and purchasing agent; Wm. Harris, chief clerk; A. Lincoln Burgan, mill superintendent; H. B. Claussen, superintendent motive power; E. J. Waters, chief mining captain; John Rowe and Wm. Rosevear, mining captains.

Organized 1882, under laws of Michigan, with capitalization \$1,500,000, shares \$25 par. Began dividend payments, 1888, and, to end of 1908, paid 43 dividends, aggregating \$9,420,000. Dividends were \$300,000 in 1906 and \$420,000 in 1907. Loss on operations, 1907, was \$249,277, and operations 1908 probably resulted in a small deficit. Annual meeting, first Thursday in May.

Lands, 1,120 acres, in Sections 10, 11, 14 and 15, Town 56 North, Range 33 West, also the Cliff mine, in Keweenaw county, a millsite on Torch Lake, and miscellaneous timber lands and other realty, giving total landed holdings of 8,640 acres.

The Tamarack mine proper is a tract of very irregular outline, bounded on all sides by lands of the Calumet & Hecla, and the mine is opened on the underlays of the Calumet conglomerate and Osceola amygdaloidal beds. The mine was planned by the late Capt. John Daniell, who conceived the idea of opening the underlay of the conglomerate by a deep vertical shaft. Actual work of sinking No. 1 shaft was begun 1882, and the conglomerate was cut, 1885, three and a half years later, at a depth only 10' greater than the estimate of Capt. Daniell, made before the first sod was removed.

The mine is opened by 5 shafts. The South Tamarack includes shafts Nos. 1 and 2, the original openings, while Nos. 3 and 4 are known as the North Tamarack, and No. 5, the newest shaft, is about midway between the north and south workings. Nos. 3 and 5 shafts are connected on a level that is the 38th in No. 5 and the 16th in No. 3. All shafts are connected underground, giving improved ventilation. The mine, as a whole, uses about 75 power drills, and, in 1907, made 6,221' of new openings. Sub-levels are opened to save excessive use of timber, and stope-drifts are opened, 12x12' in size. Rock-chutes are in use, saving much timbering. The entire system of mining has been changed, and stopes are now left with light timbering, permitting the workings to cave after ore is extracted. Since the earthquake of 1905, the inflow of water has been considerably increased. The company's operations are conducted extensively on the Osceola amygdaloid, as well as on the Calumet conglomerate, the latter showing decreased values with depth.

No. 1 shaft, 3,409' deep, not deepened for some years, cuts the Calumet conglomerate at depth of 2,270', and also cuts the Osceola amygdaloid, at about 1,000' greater depth. In this shaft, as in all others, the various levels are reached by crosscuts, except at the actual point of intersection, this applying to both the conglomerate and amygdaloidal beds. The normal productive

capacity of No. 1 shaft is 400 tons daily. This shaft has 2 Nordberg direct-acting duplex pumps, on 6th and 9th levels, these having Corliss steam-ends, each with capacity to lift 600 gallons per minute from the 9th level. A fire that broke out January, 1906, on the 22d level of No. 2 shaft, burned itself out, August, 1907, in No. 1 shaft, lasting for 19 months, after which No. 1 shaft was repaired and retimbered. This fire cost about \$200,000. Equipment of No. 1 includes a powerful hoist, good for the life of the shaft.

No. 2 shaft, 4,855' deep, not deepened for several years, is a short distance northeast of No. 1, and was straightened and retimbered, 1904, being given a double lining, with the inner wall braced against the outer by timbers of varying lengths, which can be shortened or replaced from time to time. The fire in this shaft, 1906-1907, caused considerable damage, and necessitated retimbering, but the shaft has been a producer since Jan. 16, 1907. No. 2 has a powerful hoist and the management plans swinging Kimberley skips under the cages.

No. 3 shaft, 5,253' deep, nearly a mile north of No. 1, is the deepest in the world, a 30' winze sunk near the shaft having its bottom 3' more than a mile vertically below the earth's surface. This shaft cuts the Calumet conglomerate at a vertical depth of 4,185', where the bed is 20' to 25' wide, but irregular in values, and far from rich, though payable, as a rule, normal productive capacity of the shaft being circa 1,000 tons daily. A sub-shaft, starting from the 14th level, was begun, 1908. No. 3 shaft has mechanical haulage on the 15th, 16th, 17th, 31st, 32d and 35th levels. Haulage is by endless rope, with an engine actuated by compressed air, and the management plans installing a larger haulage engine, 1909, on the 18th level.

No. 3 shaft has an Allis-Chalmers hoist, formerly having a double conical drum, of 13' 6" diameter at either end and 36' 9" diameter in the center, the cable winding over specially built-up runs of steel, affixed to the surface of the drum, which worked in counterbalance. A new drum replaced the old, 1907, the discarded drum being nearly worn out. About 20,000 rivets were removed in replacing the drum, as the old drum had to be raised and the hubs taken off, and the shaft, weighing 65 tons, also had to be raised. The new drum is similar to that of No. 5 shaft, being semi-conical, with 18' maximum diameter. The old hoist raised, on test, a 10-ton load, vertically, at a speed of 55 miles per hour, and, running at that rate, the cage was stopped in a distance of 75'. Equipment at No. 3 shaft includes a 60-h. p. fan, 10' in diameter, with blades 3' 6" wide, capable of supplying 192,000 cubic feet of free air per minute, to the depth of the shaft, not only ventilating the mine, but also aiding in reducing the temperature, which otherwise would be nearly 90° F., in the bottom levels. There is a 32x72" Nordberg auxiliary hoist, with an 18' 6" drum having lathe-turned grooves for coiling the cable, this hoist being used for lowering and raising men and timber in No. 4.

No. 4 shaft, 600' northeast of No. 3, is 4,450' in depth, and has not been deepened since bottomed, 1895. Occasional good ground is shown, but the shaft, as a whole, is poor. Underground connection is had with No. 3, giving ventilation, and an emergency exit. No. 4 shaft is used exclusively for hoisting water, lowering and raising men, and for purposes of ventilation and safety. A new concrete lining was substituted, 1904, for the old wooden timbering through the overburden. The old shafthouse was replaced, 1908, by a new frame structure, and a large ventilating fan was taken from No. 1 and installed at No. 4 shaft.

No. 5 shaft, about 3,300' southwest of No. 4, and about midway between the Old Tamarack and North Tamarack workings, is the newest and largest shaft in the mine, being 5,089' deep. Sinking was begun Aug. 2, 1895, and the conglomerate was cut Dec. 20, 1901, at vertical depth of 4,062', the late

Capt. Wm. E. Parnall having foretold the depth within 12', and the time required within 11 days, when the work was begun, 6 years previously. This shaft is connected underground with the workings to the north and south.

No. 5 shaft is 7x29', inside measurement, with 5 compartments in a row. The three central compartments, 5'x7' 2" each, are used for cages. One of the end compartments, also used for a cage, is 7' 2"x5' 4", the extra 4" being allowed for timber strain, while on the other side of the shaft is a compartment 3'x7' 2" for ladders, pipes and wires. The 10x14" wall-plates of this shaft are 29' 2" long, and the 5x7" runners, serving as guides for the cages, are 16' to 22' in length. Instead of lag-screws being countersunk, the runners have a central groove, 2" wide and 1½" deep, running from top to bottom on both sides of each of the 4 hoisting compartments, these grooves providing for the escape of loosened lag-screws, without damage to cages or runners. The shaft openings have automatic covers that lift for passage of the cages. In sinking this shaft, 83 separate trap, amygdaloidal and conglomerate strata, all barren, were cut before the Calumet conglomerate was reached. The north drifts on the 35th, 36th and 37th levels have been carried to the Calumet & Hecla boundary. As a whole No. 5 shaft is decidedly low in grade, although the conglomerate is of good average width.

The shafthouse and rockhouse at No. 5, built by the Wisconsin Bridge & Iron Co., at a cost of nearly \$100,000, are on separate foundations and are separately framed and braced, although apparently standing as one building, 56x120' on the ground, with an extreme height of 131'. The foundations are exceptionally massive, and the girders and framing are of unusual strength, to withstand the great strains caused by hoisting heavy cages, and the operation of powerful rock-breaking machinery. These buildings required about 700 tons of steel and 100 tons of corrugated iron siding in construction. Although 10 carloads of lumber were used in the building, no wood is exposed, except in the floors, asbestos sheathing-paper being used elsewhere to protect the wood, thus rendering the building practically fireproof. The rockhouse has 3 Portage Lake crushers of the reciprocating jaw type, with room for 5 more when needed.

Surface equipment at No. 5 is the most extensive at any shaft, including engine-house, boiler-house and compressor-building of redstone, with steel truss roofs. The engine-house has 2 duplicate 6,500-h. p. Nordberg hoists, each with four 36" high-pressure cylinders, having 72" stroke. The drums are 24' in diameter, in the center, tapering to 16' at the ends, each half carrying 6,500' of 1½" steel cable, the hoists operating in counterbalance, and being capable of raising, from 6,000' depth, a net load of 6 tons of rock, this having a gross weight, with cage and cable, of about 12 tons. The hoists cost \$60,000 and \$90,000 respectively. The boiler-house has six 200-h. p. Burt boilers, with 84" shells, and two 115' brick-lined self-supporting steel smokestacks. Coal is delivered to the boiler-room from a railroad trestle.

The 50x75' redstone compressor-house at No. 5 has a 35-drill Ingersoll-Sergeant 2-stage cross-compound air-compressor, with 18" and 34" steam cylinders and 36" stroke, and a 100-drill triple-expansion Nordberg compressor with 19x53x48" steam cylinders and 2-stage air cylinders of 18x27x48".

The electric plant at No. 5 shaft has a 150-kw. generator, and transmits energy to all branches of the mine. Miscellaneous buildings at No. 5 shaft include a stone dry and smithy, and there is an extensive timber yard, on ground filled and graded for the purpose, the site having been swampy originally. There is a large machine-shop, doing work for practically all of the Bigelow mines.

Water for steaming purposes and domestic use is pumped from Lake Superior, against a head of nearly 700'. The pumping station, nearly 5 miles

northwest of the mine, is 60x80' in size, of brick with steel frame, housing two 1,250,000-gallon pumps, that take water from a 40' well on the lakeshore, connecting with a tunnel driven 480' under the bed of the lake, with intake about 35' below water-level. Water is delivered by the pumps into 2 steel tanks, of 42' and 65' diameter, standing on the highest ground of the mine location, these having a combined storage capacity of 200,000 gallons, water being distributed through the mains from these standpipes, and to the Osceola mine location also.

The company owns and operates a hospital, 60x60' in size, with 2 stories, basement and attic, basement and first floor being of selected Lake Superior redstone, upper story and attic of wood, with interior finish of selected quarter-sawed Georgia pine. The building has a sun-veranda, elevators and indirect steam heating.

There is a private branch telephone exchange, with instruments at the principal pump stations in the mine, and in the various offices, shops and mills.

The company has made tentative plans for a large central electric power plant, at Dollar Bay, on Portage Lake, but, owing to uncertainty as to the control of several of the Bigelow mines, now in dispute, this matter has been held in abeyance.

The Cliff mine, owned by the Tamarack, includes the Cliff proper and the South Cliff, which were connected underground, June, 1908, on the 3d level. The Cliff mine, only a short distance northeast of the Ojibway, is the oldest mine in the Lake Superior district, having been opened 1846, closed 1870, and reopened 1872, but abandoned 1878. The Cliff paid dividends of \$2,518,620, from 1849 to 1879, inclusive. The mine was opened on a fissure vein, which was pretty thoroughly worked out before the property was abandoned, and produced much silver, perhaps the most of any Michigan mine.

The Tamarack secured a complete geological cross-section of the Cliff tract, by diamond drilling, 1903-1907. The property carries about 20 amygdaloidal beds, under the greenstone bluff, which is such a prominent feature of the landscape, rising to a height of several hundred feet. The Cliff lands presumably carry the northern extension of the Kearsarge lode. The old Cliff mine had 4 shafts, No. 1 being at the base of the bluff, No. 3 at the edge of the hill, and No. 4 several hundred feet back to the north, all in line, on the fissure vein, while the Avery shaft, sunk 40' to the eastward, was used formerly for men, timber and pumps. Work was begun, through No. 1 South Cliff shaft, about 1,000' south of the Avery shaft, and in line with Cliff shafts Nos. 1, 3 and 4. Old No. 1 South Cliff shaft had been idle circa 50 years, and was 462' deep. The shaft had been unwatered, June, 1908, down to the 6th level, leaving 2 more levels to unwater. The Avery shaft is 480' deep, with 12 levels, opened at 40' intervals. In 1907 the management partially cleaned out No. 3 shaft, and on the 3d level, at depth of 177', drifted on 5 amygdaloidal beds, or "floors," as they were termed formerly, by the old company. In 1908 the management extended a crosscut, on the old Cliff fissure, southeast, and a considerable distance northwest, to the old works under the greenstone, cutting about 20 cupriferous amygdaloidal beds, several of which have given stamp tests, and seem worthy of further investigation, showing several bunches of fair stamp-rock, but the lodes prove, so far as opened, extremely bunchy, and irregular in values. In 1907 the Cliff mine did 1,046' of drifting. Equipment at No. 1 shaft includes a shaft-rockhouse.

Buildings at the Cliff include a power-house, with duplex hoist, 5-drill air-compressor and boilers, a smithy, changing-house, combination office and warehouse, boarding-house and a number of dwellings. The Cliff mine is reached by the Keweenaw Central railway.

The old waste-burrows of the Cliff, which are extensive, were leased, on

royalty, to Henry Warren, who built an 8-stamp gravity mill, but this did not result profitably. Expenses of the Cliff mine, 1907, were \$57,214.53, charged directly to operating expenses of the Tamarack company.

The Tamarack has 2 stamp-mills, on Torch Lake, a little more than a mile south of the Calumet & Hecla mills, these having 5 compound heads and 2 simple heads, latter idle, the 5 compound heads being capable of caring for all rock crushed at present. The mills have a combined daily capacity of circa 3,500 tons of conglomerate rock. Stamp-heads are fitted with 8" mortars, opening into  $\frac{3}{4}$ " mesh revolving screens, with Parnall-Krause hydraulic discharges. The stamps have Nordberg crushing rolls, to care for raggings from the mortars, these rolls having rigid journals, with independent wash for each set. Finisher jigs have been replaced by Wilfley tables.

No. 1 mill has 5 Allis heads, 3 of which are compounded, and this mill has a steel trestle approach. No. 1 boiler-house has four 200-h. p. Pratt boilers, operated at a steam pressure of 150 lbs. per square inch.

No. 2 mill has 2 steeple-compound Allis-Chalmers stamps, with a traveling crane, and No. 2 boiler-house has seven 200-h. p. boilers.

The joint pumphouse of the Tamarack and Osceola mines has two 40,000,000-gallon pumps and one 15,000,000-gallon pump. The two larger pumps, which are duplicates, have triple-expansion steam ends, with 22", 40" and 60" cylinders of 52" stroke, and the water end has three 30" plungers and a 42" discharge pipe. The foundation for the newest large pump is 25' deep, in solid sandstone.

The mills have a 30x90' machine-shop, of sand-lime brick, with steel roof, and there are a number of dwellings for employees at the millsite.

The Tamarack and Osceola mines have joint wharves, and steel coal-sheds with unloading apparatus, at Dollar Bay, on Portage Lake, these being among the most extensive in the district.

Tamarack mineral is smelted at Dollar Bay, by the Lake Superior Smelting Co., which is controlled by the Tamarack, Osceola and Isle Royale companies, under the same general management. All mineral is transported from mills to furnaces in hopper-cars, saving the former cost of barreling.

Production has been as follows: 657,920 tons of rock stamped, yielding 15,286,093 lbs. fine copper, with an average return of 23.2 lbs. per ton, in 1903; 642,320 tons rock stamped, yielding 14,961,885 lbs. fine copper, an average of 23.3 lbs. per ton, in 1904; 750,120 tons rock stamped, yielding 15,824,008 lbs. fine copper, an average of 21.1 lbs. per ton, in 1905; 389,680 tons rock stamped, yielding 9,832,644 lbs. fine copper, an average of 25.2 lbs. per ton, in 1906; 533,600 tons rock stamped, yielding 11,078,604 lbs. fine copper, an average of 20.8 lbs. per ton, in 1907. Production was circa 13,500,000 lbs. fine copper in 1908.

Gross costs of mining and stamping, per ton of rock, and cost of finished copper, per pound, have been as follows: \$2.32 per ton and 11.5 cents per pound, in 1903; \$2.42 per ton and 12.98 cents per pound, in 1904; \$2.39 per ton and 13.37 cents per pound, in 1905; \$3.62 per ton and 14.37 cents per pound, in 1906; \$3.28 per ton and 15.82 cents per pound, in 1907. The mine made copper, 1901, for 9.1166 cents per pound, and in 1907 there was a falling off of 4.4 pounds fine copper per ton of rock stamped. The Tamarack always has been an expensive mine to work, and costs have increased, unavoidably, with depth, and the mine has suffered severely from fires. Under normal circumstances, the Tamarack is capable of earning small profits, and the management is to be commended for its vigorous efforts toward lessening costs, in all departments. The Cliff mine, while north of the proven zone of paying mines in Keweenaw county, is but a short distance from mines that are developing well, and is a property of considerable promise.

**FUNDICIÓN TAMBORAQUE.**

PERÚ.

Works office: Pacococha, Junfn, Perú. Lizandro A. Proaño, owner and manager. Property is a smelter, built circa 1906, having a 40-ton water-jacket blast-furnace, 120 kilometers from Callao, at elevation of 9,820'. The Mina Germania, having the same owner, has a 3' to 6' vein, carrying ore assaying 7 to 16% copper and 10 to 20 oz. silver per short ton.

**TAM O'SHANTER MINING CO., LTD.**

IDAHO.

Office: Spokane, Wash. Mine office: Osburn, Shoshone Co., Idaho. John H. Wourms, president; David C. Coates, secretary; Chas. Gammell, superintendent. Capitalization \$1,000,000, shares \$1 par. Lands, 7 claims, 1½ miles south of Osburn, between the Chester and Vortex groups, in the Evolution district. Property has a vein of 5' to 12' width at surface, traceable circa 2,000', carrying highly argentiferous gray copper, opened by an 80' tunnel and a 50' shaft, showing ore carrying silver, copper and lead values.

**TANGANYIKA CONCESSIONS, LTD.**

RHODESIA.

Office: 31 Clement's Lane, London, E. C., Eng. Mine office: Kansanshi, Rhodesia. Tyndale White, chairman; Robt. Williams, managing director; L. Scotland, secretary; John G. Watson, manager in Africa; Allan Gibb, general engineer; Thos. Boyne and F. E. Stubb, assistant engineers; J. H. Hayden, mine manager; John R. Farrell, consulting engineer.

Organized Jan. 20, 1899, under laws of Great Britain, with capitalization £525,000, increased, later, to £1,000,000, shares £1 par. Debentures, £2,600,000 authorized, par £8, at 5%; issued, £1,500,000. Property consists of a 45% share interest in the Union Minière du Haut Katanga; a 65% interest in the Kansanshi mine, balance being owned by British South African Co.; a 90% interest in the Benguella Railway Co., and a 40% interest in the Katanga Railway Co. The principal operating company is the Union Minière du Haut Katanga, to which the Tanganyika Concessions sold the Ruwe gold mine and the Busanga, Kasonso and Chienzi tin mines.

Lands originally were 2,000 square miles, north of the Kafue and Zambezi rivers, in the Katanga district, near the Congo Free State boundary, also 2,000 acres for railroad and steamship terminals, at the southern end of Lake Tanganyika, and a 5-year concession, that expired 1905, to explore extensive areas of the Congo Free State, and to work any discovered mine for 30 years, with option of extending the period of working to 99 years. In the Congo Free State 72 large mining concessions were located, the company estimating that 5 of these claims show 15,000,000 long tons of 4% copper ore, most of which could be extracted open-cast, and, on another group, the company estimates 1,500,000 tons of ore, of 13% copper tenor. The Congo Free State properties have been disposed of to the Union Minière du Haut Katanga, in which the Tanganyika company holds a large share interest. The company also has an interest in various discoveries in Katanga, until 1911, and mineral prospecting rights, expiring 1912, to circa 120,000 square miles in Angola. The properties in the Katanga district are in a rolling country, having a healthy climate for equatorial Africa, with good water and an abundance of wood. The diamond drill has been used extensively, proving large ore bodies, though some of the ore is highly silicious, and apparently will require special treatment for economical reduction. Mr. Williams estimates the average ore tenor of all mines at 10% copper, with some mines carrying ores averaging up to 20% copper.

The principal copper mines of the company, in various stages of development, are the Kansanshi, Kolwezi, Kambove, Kabalela, Kakanda, Likasye, Fungurume and Star of the Congo, principal development being on the Kansanshi mine.

The Kansanshi mine lies at an elevation of about 5,000', near the Congo;

Digitized by Google

Zambesi divide, 12 miles from the Congo Free State boundary, in northwestern Rhodesia. The Kansanshi is an old property, worked open-cast, by natives, for centuries, the mine showing trenches and pits for a distance of circa 6,000', these varying in width from 1' to 75', and in length from 1,000' to 1,200', with an extreme depth of 50', there being 6 principal lines of workings, varying from 3' to 30' in width, from 5' to 30' in depth, and from 300' to 1,300' length.

Country rock of the Kansanshi is sandstone, overlying limestone and schist, the sandstone being micaceous and fissile in places, elsewhere soft and clayey, through partial decomposition, the sandstone being more or less charged with malachite, occurring as speiss, the upper portions carrying malachite and chrysocolla, with occasional occurrences of azurite and melaconite, and some cuprite, with silicious gangue, carrying considerable manganese dioxide in the superficial portions. The ferruginous matter in the gangue is chiefly limonite, usually somewhat ochrous, but occasionally hard and compact. Surface ores are mainly malachite, said by Mr. Farrell to show no evidence of having resulted from alteration of sulphides in place, the results leading him to the opinion that the malachite was deposited from hot solutions, coursing in fissures. The ore, as a whole, carries an excess of about 25% silica, and will require heavy fluxing, for which purpose iron ore and limestone are not far distant.

The Kansanshi mine has 5 shafts, sunk in old trenches, on ore bodies of 1' to 16' width. The main shaft, of 300' depth, is on "D" reef, of 8' to 10' average width, opened for a distance of circa 1,000', on the 85' level, ore being massive, with copper impregnations in sandstone for 5' to 10' on either side of the vein, ore being mainly malachite, with an average sampling of 18.7% copper and circa \$2 gold per long ton. The deeper workings show a little chalcocite and chalcopyrite, associated with limited quantities of pyrite, but the base zone has not been reached, and the depth of the oxidized zone is unknown, as yet. A second level has been opened in this shaft, at depth of 134'. In the Kansanshi mine, "E" reef, of 2' to 3' width, has been opened for circa 500' distance, on the 85' level, and a new reef, of about 4' width, has been opened for nearly 500' on the 85' level.

The Kolwezi mine, opened by shaft, has been probed by diamond drill borings, showing a continuation of the copper beds to considerable depth.

The Kambobe No. 2 mine has 2 shafts, H and I, of about 100' depth each, with crosscuts said to prove an ore body of nearly 200' width.

The Fungurume mine has 4 short tunnels, one of which is said to have penetrated 191' of ore.

The Likasye mine, slightly developed by tunnel, apparently is idle.

The Star of the Congo mine is said to have ore of better average tenor than the Kansanshi, and it was said, 1907, that developments had exposed 800 tons of 8% ore, which, with assorting, would be self-fluxing.

There are small test smelters at the Kansanshi and Kolwezi mines, latter having a small blast-furnace, and test smelting was begun, circa January, 1908. According to Mr. Williams, the company planned selection and dressing of ore, so that only about 1 ton in 5 would be sent to the smelter, and it is obvious that the ore, as mined, requires concentration.

The Benguela railway, of 330 kilometers length, planned to be about 1,000 miles long, when completed, running from Lobito Bay to a smelting site on the Lualaba river that is centrally located as to the mines, had 100 miles completed and opened for traffic, early 1908. The railroad is planned to cost circa £4,000,000, complete.

Transportation between the principal mines and the terminus of the Rhodesia railway is by 3 traction engines, and the company endeavored, 1908, to induce the Rhodesia railway to build a line to the Star of the Congo mine,

instead of to the Kansanshi mine, serving the latter with a branch line. The company hopes to secure railroad connections in 1909.

The Tanganyika Concessions, Ltd., modestly claims to possess the greatest copper deposit in the world. This possibly is the case, but, while the deposits are of much promise, their exact status remains to be proven by further development, and extensive smelting operations, and the properties, while of undoubted value, must be considered overestimated. Mr. Williams estimated, 1907, that with copper at £50 per long ton, the Katanga mines had \$100,000,000 in values developed, and estimated the cost of production and delivery at £25 per long ton of finished copper, which figures are considered not only excessive as to tonnage, but much lower as to costs than are warranted. Mr. Farrell's original estimate of costs was £12 per ton of finished copper, in Katanga, but this estimate is considered entirely too low, and there is no likelihood that the company can produce copper, in the interior of Africa, at any such ridiculous price, and if the company succeeds in making copper for three times the estimated cost of 2.6 cents per pound, it will be doing very much better than the average copper mine, and the profits will be ample. The Tanganyika Concessions, Ltd., is considered a property of exceptional promise, but its management, while efficient, is entirely too much given to inflated estimates of tonnage, and unduly depreciated estimates of probable costs.

**COMPAÑIA MINERA TARAPACÁ DE COLLAHUASI.**

CHILE.

Office: Valparaiso, Chile. Mine office: Collahuasi, Tarapacá, Chile. Organized Jan. 10, 1906, under laws of Chile, with capitalization £50,000, shares £1 par.

**TABTANA, LTD.**

AUSTRALIA.

Office: London Bank Chambers, Creek St., Brisbane, Queensland, Australia. Mine office: Chillagoe, Queensland, Australia. H. M. Hicks, chairman; G. S. Murphy, auditor; E. Austin Bell, secretary. Organized under laws of Queensland, with capitalization £120,000, shares 5s. par. Lands, 230 acres, leasehold, on the Walsh river, circa 30 miles northwest of Chillagoe, showing large deposits of auriferous and argentiferous copper oxides and carbonates. A small parcel of hand-selected ore returned 15% copper. Idle several years.

**TASMAN-COMSTOCK, CONSOLIDATED.**

TASMANIA.

Mine office: Queenstown, Montagu Co., Tasmania. P. Briggs, manager. Lands, on the western slope of Mount Lyell, have 3 tunnels, lowest showing a green schist carrying copper ore of fair grade. In 1906 shipped 20 tons of silicious ore to London, for special treatment. Employs 6 men.

**TASMAN & CROWN LYELL EXTENDED MINING**

TASMANIA.

**CORPORATION, N. L.**

Offices: 47 Queen St., Melbourne, Australia, and Palmerston House, London, E. C., Eng. Mine office: North Mount Lyell, Montagu Co., Tasmania. Tom Agg Hills, chairman; C. Barclay Holland, London director; John Branden, Melbourne secretary; E. Habben, London secretary; Edw. Carter, mine manager. Organized August, 1889, and reorganized Apr. 24, 1906, under laws of Victoria, with capitalization £150,000, shares £1 par.

Lands, 8 claims, area 181 acres, leasehold, in the North Mount Lyell district, opened by 3 tunnels, longest 400' and 1,453', showing sulphide ore occurring as impregnations in schist. An 8' vein carrying a little native copper, succeeded by copper sulphides, was discovered, 1908. Ores are chalcopyrite and galena, said to give average assays of 7% copper and 15% lead. Employs 10 men.

**TASMANIA COPPER MINING & MILLING CO.**

COLORADO.

Office: 603 Provident Bldg., Philadelphia, Pa. Mine office: Winfield, Chaffee Co., Colo. D. B. Dance, vice-president; G. Albert Smyth, secretary; Edw. O. McHenry, treasurer. Organized Apr. 20, 1898, under laws of Colorado,

with capitalization \$1,000,000, shares \$1 par. Lands, 13 claims, area circa 250 acres, in the La Plata district, with about one-half mile of underground openings, estimated to show 750,000 tons of auriferous and argentiferous galena, sphalerite and chalcopyrite, which is too much. Has a 25-ton pyritic smelter. Idle and presumably moribund.

#### TASMANIAN COPPER CO., LTD.

TASMANIA.

Office: 348 Winchester House, London, E. C., Eng. Operating office: 15 Patterson St., Launceston, Tasmania. Mine offices: Rosebery, Dundas Co., Tasmania, and Blinman, Flinders Co., South Australia. F. L. Cox, chairman; E. M. King, chairman local board; W. L. Hoyt, general manager; J. G. Coldwells, London secretary; A. Simon, local secretary; G. Barker, mine manager. Organized Jan. 13, 1897, with capitalization £325,000, shares £1 par. Debentures, £12,500, at 10%, issued June, 1905, redeemable 1915, at par, or earlier at 50% premium. Company offered £30,000 new debentures, late 1908.

Tasmanian lands are 386 acres, on Mount Black Bear, near the Stitt river, in the North Dundas district, including the Rosebery and Ring River mines, also a 5-acre smelter site, all in the West Coast district. The Rosebery mine has an ore body of 24' estimated average width, traceable circa 3,000', that apparently is a replacement of country rock along a line of fault fissuring, having a schistose footwall, heavily impregnated with pyrite, and carrying a paystreak of 6" to 5' width for length of circa 500', with ore assaying 8.75% copper and 1.75 oz. silver per long ton. The ore is a complex sulphide, including auriferous chalcopyrite, sphalerite and galena, from which the zinc values have been lost heretofore, no process in use having succeeded in recovering all of the metallic values. The Rosebery mine is developed by tunnels, longest 644'. Ore reserves were estimated by the company, 1905, at 158,400 long tons, and production, at last accounts, was circa 1,000 long tons monthly. The company is said to plan a smelter at the Rosebery mine.

South Australian lands include the Blinman mine, and about 50 other small mines and prospects, in the Blinman and Yudnamutana districts, latter including the Sliding Rock mine, area 78 acres, on the south side of Sliding Rock Creek, 14 miles from Beltana, and the Yndnamutana, Leigh Creek and Warrar Warra mines. The district is arid, and considerable trouble is experienced, in the dry season, from inadequate water supply. The South Australian holdings also include 7 coal properties, area 10,000 acres, 40 miles from the Blinman mine.

The Blinman mine, area 120 acres, with 320 acres of mineral ground adjoining, is in the Flinders range, 272 miles north of Adelaide, and was bought 1902. The Blinman mine, opened 1862 and reopened circa 1899, carries ore bodies of irregular value in micaceous limestone, only the richer portions being smelted, the bulk of ore produced requiring concentration. The mine is said to have produced considerable ore of 8% average copper tenor, concentrated to about 23% for shipment to the smelters, in addition to which small quantities of hand-picked ore, of 30 to 40% copper tenor, have been shipped. The mine has a 450' main shaft, and ore reserves were estimated, June, 1904, at 58,500 tons. The Blinman has a smelter with a 150-ton blast-furnace, at Leigh Creek, north of the mine, making matte of .50 to 55% copper tenor, when in operation.

Production of the Blinman mine was 5,524 long tons of ore, yielding 937,075 lbs. fine copper, in 1904, and 898,240 lbs. fine copper during the first half of 1907. Average return of ore smelted, first half of 1905, was about 4.35% copper. The Blinman mine was closed down December, 1907, and company was said, 1908, to have definitely abandoned its properties in South Australia.

#### TASMANIAN METALS EXTRACTION CO.

TASMANIA.

Works office: Rosebery, Montagu Co., Tasmania. A. J. Thynne, manager. Organized 1908, under laws of Great Britain, with capitalization £350,000,

shares £1 par. Company plans erecting an extensive custom smelting plant, of circa 400 tons daily capacity.

**TASMAN LYELL COPPER CO., LTD.**

**TASMANIA.**

Dead. Absorbed, March, 1903, by Lyell-Comstock Consolidated Copper Co., Ltd. Formerly at North Mt. Lyell, Montagu Co., Tasmania. Described Vol. IV.

**TASMAN LYELL PROSPECTING ASSOCIATION, N. L.**

**TASMANIA.**

Dead. Formerly, circa 1891-1897, at North Mt. Lyell, Montagu Co., Tasmania.

**TATERI MINE**

**JAPAN.**

Mine office: Nosakagawa-mura, Yoshino-gori, Yamato, Japan. A very small producer, making, circa 1901, about 40,000 lbs. fine copper yearly.

**TATLAYOCO LAKE COPPER CO.**

**BRITISH COLUMBIA.**

Office: care of C. R. Howard, secretary, Spokane, Wash. A. M. Riley, treasurer; A. H. Shepard, manager; Jos. B. Lindsley, attorney; preceding officers and F. P. Greene, trustees. Organized circa 1907, with capitalization \$5,000,000, shares \$1 par. Lands, 3 groups, area 300 acres, in the vicinity of Tatlayoco Lake, in the Nanaimo district, circa 160 miles northwest of Vancouver, near the British Columbia border. One group is said to show a mountain of cupriferous pyrite, averaging 1% copper, with combined gold and silver values of \$1.50 per ton. Another group is said to have a vein 75' to 200' wide, traceable 3,000', with a 20' pay streak, said to average 5% copper and \$2 per ton in combined gold and silver values, opened by a 110' tunnel. Property is also said to show ores of iron and antimony.

**TAUNTON-NEW BEDFORD COPPER CO.**

**MASSACHUSETTS.**

Office and works: New Bedford, Bristol Co., Mass. Henry M. Lovering, president; Clarence A. Cook, vice-president and agent; Henry F. Bassett, treasurer. Is a consolidation of the Taunton Mfg. Co., New Bedford Copper Co. and Revere Copper Co. Has extensive copper and brass rolling mills.

**TAYLOR'S COPPER, LTD.**

**UTAH.**

Office: 221 Herald Bldg., Salt Lake City, Utah. Mine office: Moab, Grand Co., Utah. W. D. Bohm, manager; preceding officer, W. B. Taylor, J. R. Lotb, Edmund M. Slatter and C. P. Drennen, directors. Organized Nov. 20, 1906, under laws of Montana, with capitalization \$2,500,000, shares \$5 par. Property is the Big Indian mine.

**TAYLOR COPPER MINES CO., LTD.**

**ONTARIO.**

Office: care of Robt. H. Taylor, president, Sault Ste. Marie, Mich. H. P. Taylor, secretary. Property is in Algoma, Ontario, east of Sault Ste. Marie. Expended about \$30,000 in exploratory work. Idle since circa 1903.

**TECOLOTE COPPER CO.**

**NEW MEXICO.**

Dead. Succeeded by Las Vegas Copper Co. Formerly at Las Vegas, San Miguel Co., N. M.

**TECUMSEH COPPER CO.**

**MICHIGAN.**

Office: 12 Ashburton Place, Boston, Mass. Mine office: Calumet, Houghton Co., Mich. Employs circa 60 men. A. Agassiz, president; Col. T. L. Livermore, vice-president; Geo. A. Flagg, secretary and treasurer; Jas. MacNaughton, manager. Organized Feb. 3, 1880, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; issued, \$1,373,975. Is controlled, through ownership of 54,249 share of the outstanding stock issue of 54,959 shares, by La Salle Copper Co. Ended fiscal year Apr. 30, 1908, with a debit balance of \$128,953.

Lands, 560 acres, in a very irregular tract lying next south of the Osceola mine, carrying circa 400 acres of the underlay of the Kearsarge amygdaloid bed. Work was done first on the Calumet conglomerate, where a shaft of about 1,000' depth found no payable copper. A shaft of circa 2,300' depth, on the Osceola amygdaloid, begun 1899, was abandoned November, 1902, being found

practically barren of copper, but recent developments to the northward, at depth, in No. 6 shaft of the Osceola mine, indicate the possibility of good ground on the Osceola bed, at greater depth than yet reached in the Tecumseh shaft.

The Tecumseh carries about 1,800' of the strike of the Kearsarge lode, and has 2 shafts thereon.

No. 1 shaft, of 3 compartments, 6x18' in size, sunk diagonally on the plane of the lode, was circa 1,400' deep, early 1908, showing a bed of about 15' average width, giving a promising showing of copper. Equipment includes a hoist, good for 2,000' depth, raising 3-ton skips, and a 15-drill air-compressor.

No. 2 shaft, 1,000' north of No. 1, was started Aug. 30, 1905, and was abandoned, 1907.

Production, under a former management, was begun circa Nov. 1, 1906, at the rate of about 100 tons of rock daily, but was soon discontinued. Production, for year ending Apr. 30, 1908, was 59,875 lbs. fine copper, secured from rock mined previous to 1907.

#### TEHAMA MINING CO.

#### CALIFORNIA.

Dead. Formerly at Ingots, Shasta Co., Cal. Described Vol. VI.

#### TELEMARKEN COPPER MINING & SMELTING CO., LTD. NORWAY.

Office: 43 Finsbury House, Blomfield St., London, E. C., Eng. Mine office: Mo, Bratsberg Amt, Norway. Chas. McCully, general director; Herbert McCully, manager; J. S. Sargent, secretary. Organized May 21, 1906, under laws of Great Britain, with capitalization £100,000, shares £1 par; issued, £80,000. Debentures, £2,000, at 6%. Paid a dividend of 7½%, March 15, 1907.

#### TELESFORO COPPER CO., LTD.

#### SPAIN.

Dead. Name changed, June, 1907, to General Company of Spanish Mines, Ltd. Formerly at Cortegana, Huelva, Spain.

#### TELKWA MINES, LTD.

#### BRITISH COLUMBIA.

Mine office: Aldermere, Skeena division, Cassiar district, B. C. Lands include the Duchess and Countess claims, carrying apparently parallel bodies of argentiferous copper ore, with values mainly in silver. Development on the Duchess claim includes a 60' tunnel and several open-cuts, showing a 6' vein of copper ore.

#### TELKWA MINING, MILLING & DEVELOPMENT CO.

#### BRITISH COLUMBIA.

Mine office: Aldermere, Skeena division, Cassiar district, B. C. Lands show an ore body of circa 50' width, carrying a hanging-wall paystreak of chalcopyrite and specular iron ore, with a 150' open-cut, on the Anna-Eva claim, showing copper carbonates, pyrite and hematite.

#### TELLIER MINING & MILLING CO.

#### COLORADO.

Mine office: Idaho Springs, Clear Creek Co., Colo. Ores carry gold, silver, lead and copper. Presumably idle.

#### TEMAGAMI COPPER CO.

#### ONTARIO.

Office: Toronto, Ont. Mine office: Temagami, Nipissing, Ont. Organized 1907, under laws of Ontario, with capitalization \$2,000,000. Is said to have secured a 92' diamond drill core of good ore.

#### TEMPEST MINING & SMELTING CO.

#### OREGON.

Dead. Formerly at Alamo, Umatilla Co., Ore.

#### FUNDICIÓN TEMPLEMAN, LTD.

#### CHILE.

Dead. Voluntarily liquidated, July, 1902. Formerly at Antofagasta, Chile. Described Vol. III.

#### TENABO-MOHICAN MINES CO.

#### NEVADA.

Mine office: Tenabo, Lander Co., Nev. H. L. Sanborn, secretary and treasurer. Lands, 320 acres, developed by a shaft showing argentiferous copper

ore of low average tenor. Equipment includes a steam plant with hoist and air-compressor.

**TENDERFOOT MINING CO.**

**WYOMING.**

Dead. Formerly at Douglas, Converse Co., Wyo. Described Vol. VII.  
**TEN LAKES MINING CO.** **CALIFORNIA.**

Mine office: Edgewood, Siskiyou Co., Cal. Lands, 10 claims, circa 9 miles west of Edgewood, on Mount Eddy, showing 2 parallel fissure veins, in gabbro, crossed by 2 transverse veins, opened by tunnel and a 12' pit, latter showing auriferous and argentiferous chalcopyrite, assaying 11 to 30% copper, 2.5 to 15 oz. silver and \$5 to \$28 gold per ton.

**TENNESSEE COPPER CO.**

**TENNESSEE.**

Office: 334-11 Broadway, New York, N. Y. Mine office: Copper Hill, Polk Co., Tenn. Employs 1,200 men. J. Parke Channing, president; Fredk. Lewisohn, vice-president; E. C. Westervelt, secretary; Julius H. Susmann, treasurer; preceding officers, Henry H. Rogers, Albert Lewisohn, Walter Lewisohn, Walter S. Henry and Jas. Philips, Jr., directors; B. Britton Gottsberger, general manager; N. H. Emmons, assistant general manager; Walter L. Stevens, general superintendent; John Edwards, mine superintendent.

Organized Apr. 26, 1899, under laws of New Jersey, with capitalization \$5,000,000, shares \$25 par. Debentures outstanding, Dec. 31, 1907, \$400,000, in \$1,000 first-mortgage 20-year bonds at 5%, dated July 1, 1902. National City Bank, New York, and Old Colony Trust Co., Boston, transfer agents. Trust Company of America, New York, and State Street Trust Co., Boston, registrars. Shares are listed on the Boston Stock Exchange. Annual meeting, last Thursday in February.

Net profits and dividends have been as follows: \$417,565 profits and \$218,750 dividends, in 1903; \$186,966 profits and \$218,750 dividends, in 1904; \$452,106 profits and \$218,750 dividends, in 1905; \$824,231 profits and \$250,000 dividends, in 1906; \$800,634 profits and \$650,000 dividends, in 1907; \$500,000 dividends in 1908, giving total dividends, to Dec. 31, 1908, of \$2,025,000. During 1907 the company expended \$728,067.11 for construction account, of which \$504,525 was for the acid plant, and \$114,000 for improvements at the smelter.

Lands, 2,080 acres, with 11,000 acres miscellaneous lands, in the Ducktown district. Ore was first discovered, and mining begun, circa 1850, and the mines were operated regularly, previous to the American Civil War, which caused their suspension. Lands include the Burra Burra, London, Polk County and Tennessee mines, latter idle; also the Eureka iron mine, operated, under lease, by the Virginia Iron, Coal & Coke Co., which, 1907, extracted 39,498 long tons of iron ore.

Property shows pre-Cambrian metamorphosed mica-schist, carrying 6 series of lenticular ore bodies, of which 3, under development, show extensive gossans, originally having a little oxidized ore near surface, which was mined out, years ago. The lenses range 30' to 70' in width, and 500' to 2,000' in length, with an average depth of 400', carrying chalcopyrite, associated with pyrite, in quartz gangue, ore ranging in tenor from 2 to 4% copper, circa 40% iron, 27% sulphur and 15% silica, with very small quantities of gold and silver. As zinc and other refractory elements are lacking, the ore is excellently adapted to cheap and close concentration, and also smelts well, giving very clean slags.

The mines are extensively developed, there having been made 2,026' of new openings and 15,050' of diamond drill borings, in 1907, giving ore reserves estimated at 2,292,369 tons, with probable additional ore to the extent of 1,030,000 tons, giving total probable reserves of 3,322,369 short tons, Jan. 1, 1908.

The principal property is the Burra Burra mine, yielding about 60% of the

total ore production. This mine has 2 old shafts, known as the Hiwassee on the south and the McPherson on the north, with a new main shaft, of circa 800' depth, sunk in the footwall, at an angle of 75°, with levels opened at 100' intervals below the first, which is 172' below the collar of the shaft, and at the end of 1908 the shaft was being sunk to the 7th level. The Burra Burra has circa 2 miles of workings, not including depleted stopes, and shows a lense of 30' to 85' width, for a length of 3,000', between Hiwassee and McPherson shafts, on the 3d level. Crosscuts are driven from the shaft to the ore, on each level, and connections made between levels by winzes opposite the shafts, from which stopes are started by cutting out about 30' below the level above, leaving floors of that thickness between levels. Drifts are driven every third level only, for exploration, and at 100' intervals diamond-drill holes are bored, into both foot and hanging walls, to determine the width of the ore body.

The London mine has a 588' shaft, with 5 levels opened, on a lense of 25' to 75' width, which is 500' long on the first level.

The Polk County mine has a 385' vertical shaft, with 3 levels opened, and was preparing to open the 4th level, at end of 1908. The ore body is 20' to 90' in width, and of undetermined length and depth.

The Burra Burra has a wooden shafthouse, 127' high, with a crushing plant. The shafthouse has 3,000-ton bins, ore being fed from receiving bins to an 18x36" Blake crusher, which discharges to 36"x33" Robins belt-conveyors, leading to 2,000-ton storage bins, the conveyor-belts being used as picking tables, and, as far as possible, all barren rock is removed from the crushed ore. Equipment includes 42x144" screens and a 180-h. p. engine, the plant having a daily crushing and assorting capacity of circa 2,000 tons, ore being reduced to 4" size. There are similar shafthouses at the London and Polk county mines.

The power plant at the Burra Burra includes a brick building housing engines, air-compressors and boilers. There is an 18x32" Nordberg first-motion hoist, with 2 conical drums, each of 7' minimum and 9' maximum diameter, with 5' face, hoisting 5-ton skips, and a man-car, similar to those of the Lake Superior district, with 1½" steel cable. The power plant has 2 Nordberg 2-stage air-compressors, each of 2,000 cubic feet capacity per minute, and there is an electric light plant. The boiler plant has four 150-h. p. Babcock & Wilcox boilers, with Murphy automatic stokers.

Buildings at the Burra Burra mine include a machine-shop, carpenter shop, smithy and a large changing-house. The office building is at the Burra Burra mine, and, in addition to about 60 dwellings for workmen, the company maintains a clubhouse for unmarried members of the staff. The company maintains a 20-room hospital, with a medical, surgical and nursing staff.

The company's private railway has 7½ miles of main line, including branches to the 3 mines, with 4½ miles of sidings and spurs. The track is of standard gauge, laid with 65-lb. steel rails, connecting with the Louisville & Nashville railway, at Copper Hill, with an extensive yard for interchange of cars between the lines. Equipment of the railway includes four 105,000-lb. Schenectady locomotives, and 63 thirty-ton ore cars.

The reduction plant is at Isabella Junction, a little north of the old Tennessee mine, and 1 to 5 miles from the other mines of the company. The works do a very small amount of custom smelting. The plant, designed and built by Mr. Channing, is admirably planned, material being handled throughout by gravity, and the works were greatly enlarged, 1905, and an acid plant added, 1907.

The furnace building is of steel, with storage bins of 10,000 tons capacity for ore, and 800 tons for coke, with storage for flux and furnace products requiring retreating. Smelter charges are drawn from bins, into side-dumping

cars, of 44 cubic feet capacity, hauled by electric locomotives, there being 4 tracks under the bins, with scales for weighing charges, the tracks circling around the furnaces, so that a train loaded on any track under the bins may be dumped on either side of any furnace. There are 7 blast-furnaces, 3 of 56x180" size at the tuyeres, and four 56x270", with height from tuyeres to charge-floor of 18', and 3' 6" from tuyeres to sole-plates, which are of cast-iron, water-cooled. The furnace building also has a 25-ton refining furnace. Each blast-furnace has a circular settler, 16' in diameter, lined with firebrick, with chrome brick around the tap-holes, skimming into slag-pots of 105 cubic feet capacity, hauled by electric locomotives, slag being used for railroad ballast.

Smelting is in two stages, the first-fusion product being a matte of 15% copper tenor, which is cooled in beds, on the slag-dump, broken up and hauled to the smelter-bins. Flux for first fusion is quartz only, and the second-fusion product, for which flux is both limestone and quartz, is a matte averaging circa 32% only in copper tenor, which goes to the converters, furnaces taking an unusually heavy blast, of 50 oz. per square inch pressure, air consumption, per ton of ore smelted, ranging from 70,000 to 90,000 cubic feet. The two fusions require a coke charge of only 6.5 to 7%, by weight, of the ore smelted, equal to about 5% of the total charge. The process of smelting was changed radically, in 1905, when semi-pyritic smelting was substituted for the old method of preliminary roasting. Despite reduced production for two years, and the cost of enlarging the smelting plant, the results of semi-pyritic smelting have proven most satisfactory. In 1908 the first-fusion matte, formerly averaging only about 15% in tenor, ran up to about 19% copper, and there seems a possibility that, in time, a single fusion may provide matte of tenor suitable for the converters.

The converter department has two 40-ton electric traveling cranes handling matte, with 4 stands and 15 shells, each 84x126" in size, of the Leghorn trough type. The converter slags are poured into the blast-furnace settlers, the small amount of white metal collecting in the ladle bottoms being poured back into converters in blast, and, in this way, the only converter slags re-smelted are skulls formed in the ladles during cooling. Product of the converters is 210-lb. pigs of blister copper, of 99.4% average copper tenor, shipped mainly to Europe, as blister copper, electrolytic refining being unnecessary, because as a rule there are no precious metal values worth saving, and no impurities of importance requiring elimination.

The powerhouse at the smelter is of steel frame, with brick walls. There are two 250-kw. 500-volt D. C. Westinghouse generators, direct-connected to Nordberg tandem-compound engines, run non-condensing, exhaust steam going to a Wheeler closed feedwater heater, for heating boiler feed. Furnace blast is supplied by 3 Nordberg duplex cross-compound piston blowing engines, of 20,000 cubic feet capacity per minute each, and 3 similar engines of 30,000 cubic feet capacity per minute. There are independent mains to each furnace, but these are to be replaced by a common blast-main, above the charge-floor, with connections to each cupola. Air for converters is supplied by 2 Nordberg air-compressors, furnishing 10,000 cubic feet per minute, at 12 lbs. pressure. There is a 110-kw. 250-volt Keystone generator, direct-connected to a Ball tandem compound engine, for electric lighting. The boiler plant includes four 250-h. p. and two 550-h. p. Babcock & Wilcox boilers, with Murphy automatic stokers, the two larger boilers having Foster superheaters. Both coal and ashes are handled mechanically by a bucket and chain conveyor, coal being drawn from an overhead steel bunker.

Miscellaneous buildings in connection with the reduction plant include a smithy, plate-shop, carpenter-shop, pattern-shop and foundry.

Water supply is secured from the Ocoee river, the pumping station, at the river bank, having two 10" Worthington 2-stage pumps, belt-driven by motors, delivering 2,800 gallons per minute to large storage tanks above the smelter. Overflow from the water-jackets of the blast-furnaces passes over a cooling tower, from which the water for condensers is taken, surplus water flowing to a settling pond and storage reservoir, which has an auxiliary pumping plant.

The smelter being located in the extreme southeastern corner of the state of Tennessee, prevailing winds carry the bulk of the fumes into the state of Georgia, which brought suit against the company in the Federal courts, resulting in the decision, by the latter, that the Tennessee Copper Co. must eat its smoke. As a result the company has built one of the most complete acid plants in existence, this having cost, to the end of 1908, more than \$1,000,000, with a rated capacity of 120,000 tons yearly of 60° Beaumé sulphuric acid, but planned to be increased to a capacity of 250,000 to 300,000 tons yearly. The acid plant, begun 1906, and completed November, 1907, was put into full operation early 1908, but was not entirely satisfactory, the most serious trouble being due to the failure of the original blast-furnace tops, due to excessive heat. Some changes in the plant were made during the latter half of 1908, when it was running at the rate of only about 4,000 tons production monthly.

As the furnace gases contain sulphur dioxide, sulphur trioxide, carbon dioxide, oxygen and nitrogen, in percentages varying considerably, special methods of control have been found necessary, to maintain the volume of production of suitable gas. Fumes from the blast-furnaces go to a brick-lined balloon flue, or into a concrete flue below and immediately back of the furnaces, both discharging into a dust-chamber 209' long, 30' wide and 20' high, at the end of which is a radial brick stack, 325' high, of 25' inside diameter. Dust is removed from the chamber by two 12" conveyor-belts, placed in a tunnel underneath. In essential features the acid plant is similar to other works, the main difference being the source of gas supply, which, in this case, is taken from the concrete flue back of the blast-furnaces. The works have 2 Glover towers and 4 Gay-Lussac towers, all of unusual size, and there are 10 steel storage tanks, of about 7,000 tons capacity, into which acid is discharged from the works, and from which it is drawn into 55-ton steel tank-cars for shipment. The location of the acid plant is such, being readily accessible to the more important phosphate fields of the south, that the manufacture of superphosphates should prove a highly remunerative industry. The company was said, late 1908, to have contracted for the sale of its acid, for 40 years, at \$3 per ton, to the Independent Fertilizer Co., on the basis of 100,000 tons yearly, and is said to have received a \$250,000 bonus for this contract, with further bonuses of \$2,250,000 due later.

Production has been as follows: 8,103,534 lbs. fine copper in 1902; 10,690,389 lbs. in 1903; 8,617,697 lbs. in 1904; 7,977,982 lbs. in 1905; 11,319,591 lbs. in 1906; 12,597,611 lbs. fine copper, secured from 383,631 tons ore smelted, in 1907, giving an average recovery of 23.32 lbs. per ton, for 1907, as against 34.82 lbs. per ton in 1905. The 1907 production also included 14,905 oz. silver and 85 oz. gold, part of which was secured from custom ores smelted, and, of the total production, 205,133 lbs. fine copper were secured from custom ore, and 2,230,136 lbs. of copper produced were refined electrolytically, balance being marketed as blister copper. Production was circa 14,000,000 lbs. fine copper in 1908, and should be considerably larger in 1909. At the end of 1908, production was about 1,100 tons of ore daily, from the Burra Burra mine, and 250 tons daily, each, from the London and Polk County mines.

Cost of finished copper was 8.08 cents per pound in 1905, and 10.436 cents in 1907, or, with addition of 0.68 cents per pound for freight, insurance and

miscellaneous expenses, and 0.67 cents per pound for taxes, legal and administrative expenses, was 11.79 cents per pound. Costs were \$2.81 per ton of ore treated in 1905, and \$3.37 per ton for ore treated in 1907. Blast-furnace costs were only \$1.25 per ton of ore in 1905, and \$1.62 in 1907, while converter costs were 23.13 cents per pound in 1905, and 24.02 cents in 1907. The increased cost per ton of ore, in two years, is due almost entirely to increased wages, and increased cost of supplies, somewhat aggravated by a shortage of labor supply, during 1907. Low grade copper ores are treated profitably at other points, but, in such cases, there are appreciable gold and silver values, which are lacking at the Tennessee. The company is managed with the highest degree of technical skill and business ability, and its financial reports are unusually complete and satisfactory, giving detailed figures that not only are of vital importance to shareholders, but which are of deep interest to everyone interested in copper production.

**COMPÀNIA MINERA TEODORA DE CHUQUICAMATA. CHILE.**

Office: Valparaiso, Chile. Mine office: Chuquicamata; Antofagasta, Chile. Organized: July 20, 1901, under laws of Chile, with capitalization 120,000 pesos, shares 100 pesos par.

**TERANO MINE. JAPAN.**

Mine office: Saretami-mura, Iyo-gori, Iyo, Japan. Ore is chalcopyrite, associated with iron pyrites, carrying 4 to 5% copper. Vein, traversing chloritic schist, ranges up to 7' width, with an average of 12" to 24" only. Production, 1898, was 25,974 lbs. fine copper. Presumably idle.

**MINA TERNERES. MEXICO.**

Owned by Velardeña Mining & Smelting Co.

**TERRY COPPER SYNDICATE, LTD. TRANSVAAL.**

Office: Permanent Bldgs., Johannesburg, Transvaal. Mine office: Pietersburg, Zoutpansberg, Transvaal. Dampier Green, mine manager. Organized under laws of Transvaal, with capitalization £10,000; working capital, £4,500. Property is the Farm Waterplaats, also a year's option of purchase, at £6,000, of the farms Lucasrust and Kopermijn No. 3, adjacent, latter farms having an area of approximately 2,000 morgen. Development is by a 90' shaft, with short drifts.

**TESORA DE SONORA MINING CO. MEXICO.**

Office: 405 Kemper Bldg., Kansas City, Mo. Mine office: Suaqui de Batuc, Ures, Sonora, Mex. Geo. B. Hosier, president; Geo. E. Wittich, vice-president; Frank B. Foster, treasurer; Geo. B. Hosier, Jr., secretary; Thos. W. Foster, manager.

Lands, south of Nacozarí and 1 mile from the Yaqui River, include the Todos Santos, an antigua once having a smelter, as evidenced by a large slag-dump. Old workings were shallow, only oxidized ores having been mined and smelted, but property is said to have been a considerable producer long ago, though records are lacking. Mine shows a 75' silver-lead vein, claimed to show oxidized and sulphide ores carrying 10 to 50% lead and 15 to 500 oz. silver, which claims seems excessive. Has secured ore assaying 28.7% copper, 27.8% lead and 139 oz. silver per ton.

**TESORA SILVEE MINING CO. UTAH.**

Office: 225 Dearborn St., Chicago, Ills. Mine office: Silver City, Juab Co., Utah. E. B. Chandler, secretary, at last accounts. Capitalization, \$500,000. Was controlled, through ownership of 231,500 shares, by Bingham Consolidated Mining & Smelting Co.

**TETER-STONE AZURITE MINING CO. ARIZONA.**

Mine office: Dragoon, Cochise Co., Ariz. Dr. D. W. Teter, president. Property is said to have a 4' to 10' contact vein, between limestone and granite, showing azurite and malachite in outcrops, and sulphide ore in a tunnel.

gle

**TETON COPPER MINING & SMELTING CO.**

WYOMING.

Dead. Formerly at Jackson, Uinta Co., Wyo.

**TEXADA CONSOLIDATED MINING CO.**

BRITISH COLUMBIA.

Office: Seattle, Wash. Mine office: Van Anda, Texada Island, B. C. G. L. Tanzer, president; D. Pabst, vice-president; M. Nally, secretary. Lands include the Cornell mine, and 8 adjacent claims, known as the Raven group. The Cornell mine was opened by a glory-hole, which has caved in, and a 50' main shaft, showing bornite and chalcopyrite carrying up to 8% copper, 25 oz. silver and \$1 gold per ton. Has a steam plant with hoist and 5-drill Rand air-compressor.

**TEXADA COPPER MINING CO.**

BRITISH COLUMBIA.

Dead. Formerly at Van Anda, Texada Island, B. C. Fully described Vol. V.

**TEXAS CONSOLIDATED MINES & POWER CO.**

CALIFORNIA.

Dead. Property sold, circa 1904, to W. H. Garlick. Formerly at Redding, Shasta Co., Cal.

**TEXAS COPPER CO.**

ARIZONA.

Mine office: Tucson, Pima Co., Ariz. Chas. F. Hoff, president and manager. Capitalization \$3,000,000, shares \$1 par. Lands, 3 claims, unpatented, area 60 acres, one-half mile north of the Gould mine, in the Amado district, 20 miles northwest of Tucson. Mine has a 35' shaft and a 140' tunnel, showing a strong iron gossan with copper stains.

**TEXAS COPPER CO.**

THKAR.

Dead. Formerly had an office at Gowanda, N. Y.

**TEZEPAGO COPPER MINING CO.**

MEXICO.

Mine office: Rosario de Tesopaco, Alamos, Sonora, Mex. W. W. Harper, superintendent. Organized 1907, under laws of Colorado, with capitalization \$1,000,000, by Ernest Pratt, Will E. Ewen and Luther A. Hyde. Was developing, 1907, and planned shipping ore to National Metal Co., Hermosillo.

**TEZIUTLÁN COPPER CO.**

MEXICO.

Office: 82 Beaver St., New York, N. Y. Mine office: La Aurora, via Teziutlán, Puebla, Mex. Organized under laws of New Jersey, with capitalization \$1,000,000, shares \$100 par. Is controlled, through ownership of entire stock issue, by Teziutlán Copper Mining & Smelting Co.

**TEZIUTLÁN-COPPER MINING & SMELTING CO.**

MEXICO.

Office: 82 Beaver St., New York, N. Y. Mine offices, La Aurora, via Teziutlán, Puebla, Mex., and Ejutla, Oaxaca, Mex. Geo. D. Barron, president; Robt. S. Towne, vice-president and treasurer; S. W. Reynolds, second vice-president; preceding officers, A. Foster Higgins, W. J. Best, E. W. Gould, Jr., Henry L. Nelson, Henry Shepard and R. M. Carter, directors; Robt. L. Kayser, general manager; R. E. Safford, assistant treasurer and treasurer; A. Biaschi, superintendent; A. F. Schneider, mill superintendent; F. A. Barron, metallurgist; E. DuB. Lukis, engineer.

Organized April, 1905, under laws of New Jersey, with capitalization \$10,000,000, shares \$100 par. Controls, through entire stock ownership, the Teziutlán Copper Co., and has a close working arrangement with the Compañía Minera Mexicana. State Street Trust Co., Boston, transfer agent. Annual meeting, first Thursday in June.

Dividends are at the regular rate of 6% per annum, with extras, 1906-1907, making the rate 8% per annum. Dividends have been as follows: \$100,000 in 1903; \$350,000 in 1904; \$495,216 in 1905; \$800,000 in 1906; \$800,000 in 1907. The company, having sufficient funds on hand, anticipated the regular and extra dividends for January, 1908, distributing the regular quarterly dividend of \$1.50, and 50 cents extra, on Nov. 10, 1907, though crediting this to 1908 account, the disbursement being made at a time when dividends were

at a premium, with practically every corporation in the United States. Net earnings were \$914,013 in 1904, and are said to have exceeded \$1,000,000 in 1906.

Lands include La Aurora mine, area circa 4,500 acres, 10 miles from Teziutlán, and about 130 miles east of the City of Mexico, with a 16-acre smeltersite, and about 2,500 acres miscellaneous lands, also Los Ocotes group, of 240 hectares. The climate is equable, and mines are surrounded by fine arable lands, with a labor supply that is adequate and of good character.

La Aurora mine, opened mainly by tunnels, has developed a considerable body of auriferous and argentiferous chalcopyrite, associated with sphalerite, giving average assays of circa 8% copper, up to 200 grams silver and 5 grams gold per metric ton, with circa 15% iron, 20% sulphur, 10% calcium carbonate and 30% silica.

Los Ocotes group, area 240 hectares, was bought October, 1905, of Compañía Minera de Cobre Los Ocotes, S. A. This property, 2½ miles north of San Martín, Ejutla, Oaxaca, Mex., is a group of mines, including the San Juan, which is one of the few copper properties that has paid for development, from production, since inception, and, in addition, has given a profit, the mine having been a steady producer since 1900. Lands show 4 fissure veins, of which one, on the San Juan mine, is of 2' to 8' width, in porphyry, developed to 200' depth and 500' length, with 3 shafts, 2 of 100' each and one of 230', with circa 4,000' of workings, estimated to place 40,000 tons of ore in sight. The ore, which is sulphide, gives average assays of 6.5% copper and 15 oz. silver per metric ton, with a trace of gold, and ore, as produced, has averaged returns of circa 11% copper, with good silver values, and considerable ore has been produced averaging returns of 20% copper and 40 oz. silver per metric ton.

Equipment at Los Ocotes group includes a plant with steam, gas and electric power, steam hoists, steam pumps and power drills. In 1904 Los Ocotes produced 290 tons of concentrates, yielding 121,000 lbs. fine copper and 16,700 oz. silver.

The company has a 10-mile electric railroad, from the Aurora mine to Teziutlán, where connection is had with the Interoceanic Railway of Mexico. La Aurora mine is connected with the smelter by an aerial tram of 250 tons daily capacity.

The smelter, near the Aurora mine, includes an old plant, with 3 blast-furnaces, of about 300 tons daily capacity. There also is a new plant, with three 250-ton blast furnaces, and a converter department with 3 stands, making converter bars averaging 98.6% in copper tenor.

A 2,000-h. p. plant at the smelter includes a 1,000-h. p. hydro-electric installation, for which water is brought by a 3,600' flume, under a 900' head, from the Totonic river, the company having a government concession for the use of 2,500 liters of water per second from that stream. Electric power is transmitted 6 kilometers to the mine, from the plant at the smelter.

Production, 1905, was 7,512,252 lbs. fine copper, 286,012 oz. silver and 3,057 oz. gold. The property was closed down, Nov. 23, 1907, but development work was continued, and the new smelter completed and production supposedly was resumed, late 1908. The Teziutlán is the most successful and promising copper mine in southern Mexico, and has a good management.

#### THAESIS CONSOLIDATED COPPER MINES, N. L.

TASMANIA.

Dead. Formerly, circa 1893, at North Mt. Lyell, Montagu Co., Tasmania.

#### THAESIS SULPHUR & COPPER CO., LTD.

SPAIN.

Office: 126 West George St., Glasgow, Scotland. Works offices: Oldbury, Worcestershire, Eng., Wellington Quay, Northumberland, Eng., Hebburn-on-Tyne, Durham, Eng., and Cardiff, Glamorganshire, Wales. Mine office: Alonso, Huelva, Spain. Jas. King, chairman; preceding officer, Jas. Cooper, Louis Oscar

Schmidt, A. J. Messeán, H. Gaaskell, E. M. Chelvet, R. Millet, T. Alexander, Hugh Brown and Sir Edw. P. Tennant, Bart., M. P., directors; Geo. Reid, secretary; Wm. P. Rutherford, general manager; Geo. Gray, superintendent.

Organized Oct. 27, 1886, under laws of Great Britain, with capitalization £1,250,000, shares £2 par. Dividends have been as follows: 17½% yearly in 1904 and 1905; 25% in 1906; 20% in 1907. To end of 1907 company's dividends aggregated 795½% on the share capital, amounting to the magnificent total of £8,852,182, in addition to which the company had written off the sum of £2,416,065, and held the large reserve of £1,138,244, in cash and unusually choice securities. The company's dividends have averaged nearly 20% per annum, since 1868, without the lapse of a year in disbursements, a dividend record comparable, among copper mines, only with that of the Quincy, of Michigan. Net profits, after all deductions, have been as follows: £218,866 in 1903; £215,593 in 1904; £225,135 in 1905; £315,147 in 1906; £216,023 in 1907.

Lands include the Tharsis group, area 1,143 hectares, and the Lagunazo group, area 271 hectares, at Alosno, about 30 miles west of the Rio Tinto, and the Calañas or Zarza group, area 618 hectares, at Calañas, midway between the Tharsis and Rio Tinto mines. The mines at Alosno, worked by the Romans, and probably by their predecessors as well, are identified, by some, with the Tarsish of the Bible. General geological conditions are much the same as at the Rio Tinto, the mines being in the southern zone of the Andevallo or Sierra Morena district of Huelva. The property shows 4 main lenses, these having their axes of length southeast by northwest. The largest lense is the Criadero del Sur, to the south. The Filon del Norte, to the northeast, is about 600 meters long and 140 meters in extreme width. The smaller lenses are the Criadero de la Sierra Buillones, and the Filon del Medio, to the northwest. The Tharsis and Lagunazo have been the principal producers in the past, but are nearing exhaustion. The Calañas is developing fairly, and has about 10 years ore reserves developed. The company also is developing the Almagrera, Triunfo and Vulcano mines, at Alosno.

The ores of the Tharsis average about 3% copper, 50% sulphur and 45% iron, with very small quantities of gold, silver, lead, zinc, nickel, bismuth, antimony and arsenic. Ore, after extraction, is piled in heaps and weathered, this process being assisted by occasional sprinkling. The leach-water goes into creosoted timber sluices, where the copper in solution is deposited on pig iron, and precipitate prepared for smelting in the usual manner.

The work of stripping the overburden from the eastern extension of the Sierra Buillones mine is progressing satisfactorily, stripping having amounted to 83,374 cubic meters in 1907. Removal of the overburden from the Calañas mines was 145,580 cubic meters in 1906, and 128,266 cubic meters in 1907. At the Lagunazo mine, operations have been confined, for several years, to leaching tereros.

The company owns a private railway, leading from the mines to Corrales, where there is a shipping pier. The line is well supplied with rolling stock, frequent renewals keeping the equipment modern and efficient.

Owing to the gradual exhaustion of its principal Spanish ore bodies, the company has been endeavoring, for some years past, to secure new mines, and, to that end, has investigated properties in Norway, Italy, Cyprus, Russia, Mexico, Canada, Tennessee and Arizona. Two contiguous properties, in Arizona, were under investigation during 1908, and the company is in the market for a mine of cupiferous pyrites, rich in sulphur, with large bodies of ore, and would give consideration to a promising copper property, regardless of sulphur values.

The company owns extensive works at various points, including a wet process plant at Hebburn-on-Tyne, and an electrolytic refinery at Oldbury, a

suburb of Birmingham, with other works at Wellington-on-Tyne, Cardiff, Wales, and Garngad, a suburb of Glasgow, Scotland.

Production of fine copper was 11,147 long tons in 1898; 5,620 long tons in 1901; 12,590,226 lbs. in 1905; 10,617,600 lbs. in 1906 and 9,878,400 lbs. in 1907. Production for 1907 included 81,034 long tons of ore from the Sierra Brillones, and 376,658 tons from the Calañas, an increase of 34,310 tons for the year, with the total ore extraction of 457,692 tons, an increase of 19,935 long tons, the first increase in ore production for some years, with a decrease of 329 long tons in output of finished copper. Production, 1907, included 2,753 long tons of regulus, and ore shipments, including washed sulphur ore, of 406,015 long tons. The record of this property is one of the best ever made by any copper mine.

#### THOMPSON-LEHMER MINING CO.

MEXICO.

Letter returned unclaimed from former office, Omaha, Neb. Mine office: Ocotlán, Oaxaca, Mex. Guillermo W. Thompson, general manager. The property at Ocotlán has auriferous and argentiferous copper and lead ores, with steam and electric power, employing circa 50 men, at one time. Company also is said to have lands in the Tlacolula, Villa Alta and Ixtlán districts of Oaxaca, with aggregate holdings of circa 1,000 hectares.

#### THOMPSON RIVER COPPER & PLATINUM SYNDICATE. AUSTRALIA.

Mine office: Walhalla, Gippsland, Victoria, Australia. Peter Finlayson, chairman. Organized circa 1907. The mine, having a 140' shaft, is claimed to have produced 1,000 tons of copper ore in the past, being one of the very few copper mines of Victoria.

#### THOMPSON SIDING COPPER & GOLD MINES, LTD. BRITISH COLUMBIA.

Dead. Was dissolved August, 1904. Formerly in British Columbia.

#### THORNE COPPER MINING & REDUCTION CO.

NEVADA.

Letter returned unclaimed from former office, 405 Empire Bldg., Denver, Colo. Mine office: Hawthorne, Esmeralda Co., Nev. B. E. Young, superintendent. Is a twin of the Walker Lake Copper Mining & Smelting Co. Lands, circa 8 claims, 4½ miles east of Walker Lake. Is not regarded favorably. Idle and apparently moribund.

#### THREE BEARS MINING CO.

NEW MEXICO.

Dead. Lands sold, circa 1905, to Southwest Smelting & Refining Co. Formerly at Jarilla, Otero Co., N. M. Fully described Vol. V.

#### THREE Cripples MINING CO.

WYOMING.

Office and mine: Esterbrook, Albany Co., Wyo. Lands, immediately north of the Maggie Murphy, have an 85' shaft, showing mainly gold values.

#### THREE JAYS COPPER CO.

BRITISH COLUMBIA.

Dead. Formerly at Alberni, Vancouver Island, B. C.

#### THREE MAN MINING CO.

ALASKA.

Mine office: Landlock, Prince William Sound, Alaska. W. A. Dickey, manager. Lands, near tidewater, are said to show an 8' vein of massive chalcopyrite, which probably is an exaggeration.

#### THUMB BUTTE MINING & MILLING CO.

ARIZONA.

Mine office: Prescott, Yavapai Co., Ariz. Lands, 8 miles west of Prescott, are opened by tunnel.

#### THUMB BUTTES MINING CO.

ARIZONA.

Office: Yuma, Ariz. Mine office: Dome, Yuma Co., Ariz. Porter Moffett, president; preceding officer, Perry Q. Spittler, A. B. Mink and J. L. Lee, directors. Organized circa July, 1907, with capitalization \$1,500,000. Lands, circa 1,200 acres, showing ore, including some chalcocite, giving good assays in copper, silver and gold. Company was said, September, 1907, to have 20,000 tons of ore on the dump, which seems questionable.

**VEREINIGTE THÜRINGISCHE KUPFERBERGBAU  
GEWERKSCHAFT.**

GERMANY.

Mine office: Gotha, Saxe-Coburg-Gotha, Germany. Karl Gürtler, manager, at last accounts. Property is the Carl Alexander, Sophie, Carl August, Bernhard and Wilhelm Ernst mines.

**ASOCIACIÓN DE PROPIETARIOS DE LAS MINAS  
DEL TIBIDABO.**

SPAIN.

Office: Moncada 31, Barcelona, Spain. Mine office: Cassolas, Barcelona, Spain. Property is the San Gervasio de Cassolas mine, carrying chalcopyrite. Idle some years.

**TICOON MINE.**

MONTANA.

Office and mine: care of Jas. A. Murray, owner, Butte, Silver Bow Co., Mont. Property, lying between the Bell mine of the Anaconda and the Speculator mine of the North Butte, has a 500' incline shaft on the vein, with one level opened, at depth of 300', and is said to show 4' of good ore in the bottom, which seems somewhat doubtful. Operations were resumed, circa Sept. 1, 1908.

**TILT COVE COPPER CO., LTD.**

NEWFOUNDLAND.

Office: 9 Queen St. Place, London, E. C., Eng. Mine office: Tilt Cove, Newfoundland. Col. J. W. Young, chairman; E. C. Leaver, secretary; John Taylor & Sons, managers; F. J. Williams, superintendent. Organized Apr. 4, 1888, under laws of Great Britain, with capitalization £200,000, shares £2 par; issued, £178,000. Debentures, £80,000 first-mortgage 5½% bonds. For fiscal year 1907 the Tilt Cove mine earned profits of £57,534, divided equally between the Tilt Cove and Cape copper companies, comparing with profits, for 1906, of £99,340, similarly divided. Company ended 1907 with a cash balance of £25,587 13s. 9d. Dividends were 18¾% in 1905, 26¼% in 1906, and 18¾% in 1907.

Lands, freehold, known as the Tilt Cove mine, on Notre Dame Bay, on the northern shore of Newfoundland, are leased for 99 years, expiring 1989, at an annual rental of £4,400, plus one-half the net profits, to the Cape Copper Co., Ltd., lease being terminable on one year's notice from the lessees. Property includes 3 mines, known as the West, Bluff and South mines. The mines have been worked since circa 1870.

The East mine produces sulphide ores averaging 3 to 3.5% copper, with small gold and silver values, the pyritic ore from the East mine averaging, 1896, about 3.7% copper. The West mine has smaller sulphide ore bodies, of high grade, averaging about 11% copper. Ore reserves in all mines are estimated at 125,000 long tons, and yearly production is 75,000 to 100,000 long tons of ore. For 1905 ore was mined at an average cost of only \$1.72 per long ton, and mining costs, 1907, from the open pit of the East mine, were \$1.21 per long ton. Production was 6,122,000 lbs. fine copper in 1904 and 5,104,960 lbs. in 1905.

**TIMBER PEAK MINING CO.**

NEW MEXICO.

Mine office: Socorro, Socorro Co., N. M. Ores carry gold, silver and copper. Has a concentrator. Long idle and apparently moribund.

**TINGHA MINE.**

AUSTRALIA.

Office: Mereweather, N. S. W., Australia. Mine office: Tingha, N. S. W., Australia. Jas. McAlister, secretary; Capt. W. Davey, manager. Lands, 2 miles east of Tingha, show a 3' vein, originally opened for tin, succeeded at depth by copper, carrying a 3" paystreak assaying 30 to 40% copper, with balance of ore body said to assay circa 15% copper.

**TINTIC COMPANY.**

UTAH.

Office: Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Grant B. Schley, president; Kenneth B. Schley, vice-president; Michael Gavin, secretary and treasurer; preceding officers, Fredk. Strauss and

**M.** Jaretski, directors. Organized, 1903, under laws of Maine, with capitalization \$3,000,000, shares \$5 par, increased, 1906, to \$4,000,000. Is the parent company of the Tintic Mining & Development Co., Yampa Smelting Co., and West Mountain Tramway Co., and is a securities-holding corporation only.

**TINTIC MINING & DEVELOPMENT CO.** UTAH.

Office: 213 Dooley Blk., Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Capt. Henry Stern, president; Chas. W. Saxman, general manager; J. C. Dick, general superintendent; N. Treloar, mine superintendent; E. E. Price, mine foreman. Organized, 1896, with capitalization \$3,000,000, and reorganized January, 1906, under laws of Maine, with capitalization \$3,500,000, shares \$5 par. Is controlled, through stock ownership, by the Tintic Co., and is operated as a close corporation, making no public reports.

Lands include claims in the Tintic district, now idle, on which heavy expenditures gave indifferent results, and the Yampa group, area circa 180 acres, on Carr Fork, Bingham Canyon, near the Utah Consolidated and Boston Consolidated, which shows a vein of 10' to 200' width, with average width of circa 37', carrying disseminated chalcocite, covellite and chalcopyrite, formerly estimated to average 3.5% copper and \$2 to \$5 combined gold and silver values per ton, but now said to average 1 to 3% copper, 2 oz. silver and \$1.50 gold per ton. Ores are highly ferruginous, rendering them valuable for fluxing the highly silicious ores of the Bingham district.

Development is almost exclusively on the Yampa mine, a fractional claim of less than .6 acres area, entirely surrounded by the Utah Consolidated. The mine has several miles of workings, and is developed by 2 tunnels and a 1,700' shaft. The Craig haulage tunnel, on the 1,200' level, is 3,218' long, intercepting the main vein at about 2,200' from the portal, and connecting with the shaft at 2,448'. There are 12 levels, of which 8 are producing ore, above the haulage tunnel, and the blind shaft on the 1,200' level connects with the Craig tunnel. The Upper, or Yampa tunnel, intersects the shaft at 475' and runs about 1,000' on the vein, ore from the Yampa workings being sent down the shaft to the Craig tunnel for extraction. The management is said to plan sinking the shaft to 1,500' depth. Ore is hauled, in the Craig tunnel, in trains of 6 three-ton cars, by 2 electric locomotives. As the ore is soft, heavy timbering is required, square sets being used.

Equipment includes an electric hoist, at the head of the blind shaft, on the 400' level. There also is a hoist actuated by compressed air. The power plant, near the portal of the Craig tunnel, has steam and electric power, with a 35-drill Ingersoll-Rand air-compressor.

The mine has a 12,300' aerial tram, the longest in the Bingham camp, with 600-ton ore-bins at the upper terminal. The tramline saves about 25 cents per ton on transportation and insures an adequate ore supply for the smelter, which is at the lower end of the tram. The smelter is described under title of its owner, the Yampa Smelting Co.

Production was 4,699,765 lbs. fine copper in 1906 and 5,001,255 lbs. in 1907. The Yampa mine, though small, is valuable, and the management is good.

**TINTIC SILVER CROWN MINING CO.** UTAH.

Office: 508 Auerbach Bldg., Salt Lake City, Utah. Mine office: Mammoth, Juab Co., Utah. Hon. John A. Edwards, president; Dr. L. W. Snow, vice-president; Mansfield L. Snow, secretary, treasurer and general manager; preceding officers, C. E. Cole and M. K. Green, directors. Organized Aug. 20, 1908, under laws of Utah, with capitalization \$100,000, shares \$10 par; issued, \$61,250.

Lands, 25 claims, area circa 500 acres, well watered and fairly timbered, in the Blue Belle district of West Tintic, 8 miles from a railroad, showing

fissure veins in porphyritic rocks and contact deposits in crushed zones in quartzite, there being 10 ore bodies, of which 3 are under development, one showing a 10" paystreak of massive galena, estimated to average 70% lead, 12 oz. silver and 75 cents gold per ton.

Development is by three 50' shafts, three 40' tunnels, a 100' tunnel and a 250' tunnel. Company plans continuous development.

#### TINTIC SMELTING CO.

UTAH.

Office: Salt Lake City, Utah. Works office: Silver City, Juab Co., Utah. Chas. W. Nibley, president; Jesse Knight, vice-president and general manager; H. E. Rolapp, secretary; John Pingree, treasurer; Bela Kadish, superintendent; preceding officers, David Eccles and C. E. Loose, directors; Howard P. Saunders, mechanical engineer; Richard F. McCaffrey, metallurgical superintendent. Organized circa December, 1906, with capitalization \$500,000, shares \$1 par.

Property is a newly built reduction plant, of 350 tons daily capacity, planned as the first unit of a 700-ton smelter, works including a sampling mill. Smelter has two 14x60' hand-roasters, 4 Kelly cintering converters, and two 46x162" lead furnaces. The copper department is to include a 4x120' steel frame building, having a 125-ton blast-furnace. Plant is of modern design, and well equipped throughout, and works are well located for smelting lead ores, with considerable copper ore available, and should prove a great benefit to the Tintic district and adjoining fields. Planned beginning lead smelting July, 1908, and copper smelting circa September, 1908.

#### TINTIC STANDARD MINING CO.

UTAH.

Mine office: Eureka, Juab Co., Utah. E. J. Raddatz, general manager. Organized circa October, 1907, with capitalization \$1,000,000. Lands, 14 claims, having a fissure vein of 30' to 80' estimated width and a 220' shaft, showing low grade lead ore, with gold and copper values.

#### SOCIEDAD DE LAS MINAS DE COBRE TINTO y SANTA ROSA. SPAIN.

Office: Rue Archimedes, 1, Brussels, Belgium. Mine office: Zalamea la Real, Huelva, Spain. Capitalization, 3,000,000 francs. Lands, 114 hectares, including El Tinto, Santa Rosa and 9 other old mines. Has a 7-kilometre aërial tram to Calafias. Property is leased to the United Alkali Co., Ltd.

#### TIPTON COPPER CO.

NEW MEXICO.

Dead. Formerly at Tularosa, Otero Co., N. M.

#### TIP TOP COPPER CO.

ARIZONA.

Office: Commonwealth Bldg., Philadelphia, Pa. Western office: 7 Coles Blk., El Paso, Tex. Mine office: Helvetia, Pima Co., Ariz. Geo. A. Aman, president; S. Charles Pratt, vice-president and general manager. Organized 1902, under laws of Arizona, with capitalization \$1,150,000, shares \$1 par.

Lands, 24 claims, area 400 acres, including the Tip Top and Copper Duke claims, also a 100-acre millsite, in the Helvetia district, showing 3 contact veins, averaging 14' width, carrying carbonate and sulphide ores, giving average assays of 5% copper and 1 oz. silver per ton, with a trace of gold, opened by 7 shafts, of 10' to 150' depth, and several tunnels, longest 958', with about 4,000' of workings. Has gasoline power and has developed considerable ore. Was bonded, 1907, to Guggenheim interest, for \$250,000, with cash payment of \$75,000, but both parties to bargain were dissatisfied, and property reverted to owners. Made considerable ore shipments, 1906-1907. Production, 1906, was 298,890 lbs. fine copper. Property considered promising.

#### TIP TOP COPPER CO.

NEW MEXICO.

Dead. Lands sold, circa 1908, to Burro Mountain Copper Co., for \$15,000. Was akin to a swindle; final dividend to shareholders was 1 mill on the dollar. Formerly at Silver City, Grant Co., N. M. Described Vol. VII.

**TIP TOP MINE.****ONTARIO.**

Office: Port Arthur, Ont. Mine office: Kashaboiwe, Rainy River district, Ont. Col. S. W. Ray, manager; Richard Sandoe, superintendent.

Lands, 4 claims, freehold, area 336 acres, known as locations K62, K63, K64 and K65, 6 miles from Kashaboiwe, on Round Lake in Moss township, showing schist and diorite, carrying 3 contact deposits, ranging up to 150' in width, with 2 ore bodies, of 25' estimated average width, carrying circa 18' of ore giving average assays of 7% copper, 5 to 12 oz. silver and \$1 to \$2 gold per ton. Development is by shafts of 50' and 208', with 640' of workings, estimated to show 45,000 tons of ore, which seems high. The mine is said to have blocked out a considerable amount of ore, of 4 to 6% in copper tenor, on a vein ranging up to 60' width in the bottom workings.

Equipment includes a 100-h. p. steam plant, with 10-h. p. and 30-h. p. hoists, and a 5-drill Ingersoll-Sergeant air-compressor. Part of the material for a smelting plant was secured, 1907, but apparently erection of smelter not begun. Property considered promising.

**COMPANIA MINERA DEL TIRO GENERAL, S. A.****MEXICO.**

Office: 2a Ojaliente No. 8, Aguascalientes, Mex. Mine office: Chareas, San Luis Potosí, Mex. J. G. Creveling, Jr., president and general manager; W. F. Layer, vice-president; G. B. Wardman, secretary and treasurer; preceding officers, Thos. J. Ryder and O. F. Westlund, directores; DeWitt Creveling, superintendent; E. J. Cloyd, assistant superintendent; William Mueller, mine superintendent; Pablo Fuentes, engineer; W. O. Staples, auditor. Organized July 31, 1902, under laws of Mexico, with capitalization 375,000 pesos, shares 100 pesos par. Dividends, 1905, were 150,000 pesos.

Lands, 71 pertenencias, area 176 acres, also 25 acres of millsites and a 50-acre farm, in the Chareas district. The mine shows 2 main systems, carrying fissure veins in porphyry, not far from a limestone contact, the North vein averaging 3 to 8 meters width, with known length of circa 450 meters, developed for 350 meters length by shafts of 306m., 200m., 130m., 130m., 90m., 85m. and 55m., with upwards of 3,000 meters of workings on the North, or main vein, showing circa 200,000 metric tons of ore. The workings on the south zone are idle, awaiting the establishment of a concentrating plant adapted to this ore, which is of milling grade. The ore developed in the south zone is almost exclusively sulphide, and averages 2% copper, 5% lead, 12% zinc, 430 grams silver and 0.8 grams gold per ton.

The mines, discovered circa A. D. 1583, were worked on a small scale for nearly 3 centuries, and on a larger scale since 1869. The property has a 340-h. p. steam plant for hoisting and pumping, and in addition makes some use of mulecates. Equipment includes 80-h. p. and 100-h. p. hoists, a Cameron station pump, and a 10-drill air-compressor. There is a combination machine and carpenter shop, of stone, with good equipments.

The 100-ton mill is planned to be increased to 250 tons capacity. The mine has a large number of structures, for various uses, all built of stone, including, a general store, etc.

The stockholders of this company own the Potosí Central railroad, of 15.1 kilometers length, running from the mine to Las Chareas station, on the Mexican National railroad.

Fuel is Laredo coal, costing \$6.85, gold, per ton, delivered, and eastern coal, costing \$8.40, gold, per metric ton, delivered. Production, 1905, was 2,281,761 lbs. fine copper, made from 48,000 metric tons of ore carrying 2.16% copper. Production, 1907, estimated at 2,250,000 lbs. fine copper. Ore costs \$4 gold per dry metric ton, f. o. b. cars of Mexican Central Railway. Forces, nominally, are about 750 men.

Company is a close corporation, with only 35 shareholders. The management is good, and the property is one of proven merit.

#### TITANTIC COPPER CO.

ARIZONA

Office: 224 Milk St., Boston, Mass. Mine and works office: Williams, Coconino Co., Ariz. Organized June 3, 1907, under laws of Arizona, with capitalization \$1,000,000, practically as successor of Anita Copper Co., which lost its lands through foreclosure.

Lands, 50 claims, area 1,000 acres, lying on both sides of the Bright Angel branch of the Santa Fé railway, also a 160-acre millsite and 60 acres miscellaneous lands, giving total holdings of 1,220 acres. Property shows Carboniferous limestone strata of circa 800' thickness, carrying 3 irregular ore bodies, of which one, slightly developed, has oxide and carbonate ores assaying 8 to 15% copper, and 3 to 4 oz. silver per ton, opened by shafts of 40', 33' and 580', with several short tunnels. Ore, as extracted, carries 4 to 8% copper.

Equipment includes a Fairbanks & Morse gasoline hoist, a 12-drill Rand air-compressor and 8 power drills.

The smelter, at Williams, 47 miles from the mine, with direct rail communication, has a 100-ton water-jacket blast-furnace, with other equipment for a 200-ton smelter.

The company had a contract with the Consolidated Arizona Smelting Co., to furnish fluxing ores, on a basis of 75 cents per ton and 40% of ore values extracted, the Consolidated Arizona doing the mining, but owing to bankruptcy of latter-named company, the contract was terminated, and property was idle at last accounts.

#### GUSTAVO TITUS.

CHILE

Mine and works office: Olmué, Limache, Valparaiso, Chile. Lands, 12 kilometers from the railway station of Limache, include the Felicidad, Abundancia and Veta Grande mines, showing large quantities of low grade auriferous and argentiferous copper ore. Smelter, having 1 reverberatory furnace, in 1903 treated 1,300 metric tons of ore averaging 3.5% copper, producing therefrom ejes of 46.89% average copper tenor, carrying 79,702 lbs. fine copper.

#### TOBACCO ROOT RANGE MINING CO.

MONTANA

Dead. Formerly at Mammoth, Madison Co., Mont.

#### SOCIEDAD BENEFICIADORA DE TOCOPILLA.

CHILE

Office: Valparaiso, Chile. Works office: Tocopilla, Antofagasta, Chile. Organized Sept. 7, 1906, under laws of Chile, with capitalization £200,000, shares £1 par.

#### COMPAÑIA THE TOCOPILLA SMELTING WORKS.

CHILE

Office: Valparaiso, Chile. Works office: Tocopilla, Antofagasta, Chile. Organized Aug. 11, 1906, under laws of Chile, with capitalization 500,000 pesos, shares 50 pesos par. In liquidation, 1907.

#### TODD COPPER CO.

ARIZONA & CALIFORNIA

Office: Lankershim Bldg., Los Angeles, Cal. Mine office: Ehrenburg, Yuma Co., Ariz. U. S. G. Todd, president; E. Julian Solomon, vice-president; Wilbur H. Dran, secretary; preceding officers, Dr. H. Pittman and Henry R. Booker, directors. Organized Jan. 6, 1907, under laws of Arizona, with capitalization \$5,000,000, shares \$1 par. Lands, 3 claims, area 60 acres, in the Weaver district, circa 12 miles east of Ehrenburg, also 4 claims in the Old Woman Mountains, San Bernardino county, California. Planned developing Ehrenburg claims by tunnel.

#### TOKAR (SUDAN) PROSPECTING SYNDICATE, LTD.

SUDAN

Office: 7 Devonshire Square, London, E. C., Eng. Sir F. Frankland, chairman; Felix F. Wilson, secretary. Organized Dec. 2, 1904, with capitalization £5,000, shares £1 par. Property is a license, from the Sudan government, to prospect for minerals. Location of prospecting rights is approxi-

mately between 17° 30' and 18° North Latitude, and between 37° 45' and 38° 30' East Longitude. Copper float is found over an area of circa 150 miles square, in a mountainous region near the Erythrean border, inhabited by the Hassas, a tribe of ebony Arabs. Country rocks are schist, having a strike of west of north, and a westerly dip, associated with eruptive crystalline rocks, showing numerous veins of low grade ore, averaging about 2% copper only. Apparently no work in progress.

#### **TOLLEDO MINING & POWER CO.**

#### **MONTANA.**

Office: 108 LaSalle St., Chicago, Ills. Mine office: Brandon, Madison Co., Mont. Louis D. McCall, president and general manager. Organized circa 1905, with capitalization \$50,000, apparently as successor of Bismarck-Nugget Gulch Consolidated Mining Co. Lands, 17 copper claims and 18 gold claims, 3 groups of copper claims being on Stone Creek, in the Buby Mountains. Property has a 60-ton concentrator and a 30-ton smelter. Idle and presumably dead.

#### **SOCIÉTÉ ANONYME MINES METALLIQUES DE TOLOSA.**

#### **SPAIN.**

Office: Monceau les Mines, France. Letter returned unclaimed from former mine office, Leiza, Navarra, Spain. Capitalization, 715,000 francs, 500 francs par. Property comprises iron mines in Guipúzcoa, and lead-copper mines at Navarra, latter including the Regina and other mines, partially prospected, and presumably idle.

#### **TOLTEC METALLURGICAL CO.**

#### **MEXICO.**

Office: 743 Equitable Bldg., Denver, Colo. Mine office: Matehuala, Catoree, San Luis Potosí, Mex. Jas. A. Kilton, president and general manager; Edw. F. Welles, vice-president and treasurer; John S. Gibbons, secretary. Organized under laws of Arizona, with capitalization \$1,500,000, shares \$1 par, and protocolized under the laws of Mexico.

Lands, 798 acres of mineral lands, and a 200-hectare smeltersite. Property includes La Cobriza mine, idle; San Diego mine, having a 600' shaft, showing ore assaying 49 to 93 oz. silver per metric ton, and the Candelaria mine, having an 877' tunnel, carrying silver-lead ore of tenor up to 60% lead and 10 to 200 oz. silver per metric ton, also showing some auriferous copper ore carrying up to 6% copper. Planned, 1906, building a 150-ton smelter, with lead and copper stacks, at Estación Vanegas, on the main line of the Mexican National railroad, about midway between Monterey and San Luis Potosí. Company made extremely florid promises, and an explanation seems due to shareholders.

#### **TOLTEC MINE.**

#### **MICHIGAN.**

Office: care of Alfred Meads & Sons, owners, Marquette, Mich. Mine office: Greenland, Ontonagon Co., Mich. Lands, 320 acres, carrying the underlay of the Evergreen belt and the Calico and adjacent beds of the Michigan. Production, 1851-1860, was 413,443 lbs. fine copper. Diamond drilling was begun, circa April, 1908.

#### **TOLTEC MINING & SMELTING CO.**

#### **MEXICO.**

Office: care of A. W. Cunningham, president, Waco, Tex. Mine office: Ayutla, Oaxaca, Mex. A concentrator, planned 1906, seems lacking still. Idle and presumably moribund.

#### **TOLWONG MINERAL CO., LTD.**

#### **AUSTRALIA.**

Mine office: Shoalhaven, N. S. W., Australia. Organized circa January, 1908, under laws of New South Wales. Lands show arsenical copper ores.

#### **TOMAHAWK COPPER & ZINC MINING CO.**

#### **ARKANSAS.**

Dead. Formerly in Marion and Searey counties, Arkansas.

#### **TOMAHAWK JUNIOR MINING CO.**

#### **MICHIGAN.**

Office: care of H. F. Fay, 60 State St., Boston, Mass. Mine office: Calu-

met, Houghton Co., Mich. Organized circa June, 1899, under laws of Michigan. Lands are in Keweenaw county. Idle since organization.

**TOMBSTONE GOLD, SILVER & COPPER CO.**

**ARIZONA.**

Office: Bisbee, Ariz. Mine office: Tombstone, Cochise Co., Ariz. J. W. Shelor, president; R. C. Spink, vice-president; Dr. T. M. Smith, secretary; H. E. Haughton, treasurer; A. T. Schuster, superintendent; preceding officers, John Wahrenberger, S. C. Edmiston and M. W. Larsen, directors.

**TOMBSTONE MINING CO.**

**IDAHO.**

Mine office: Mullan, Shoshone Co., Idaho. O. A. Larson, John H. Foss, John Erickson and Hans J. Rice, directors. Capitalization \$1,500,000, shares \$1 par. Lands, 9 claims, on Stevens Peak, south of Mullan, showing a vein of circa 15' width at surface, with good ore indications. Development is by a 500' crosscut tunnel. Property has given ore assaying up to 15% copper and 2.5 oz. silver per ton.

**TOM HAL MINING CO.**

**WASHINGTON.**

Mine office: Pateros, Okanogan Co., Wash. Thos. B. Warren, president and general manager, at last accounts. Company is a dead-beat. Lands, 5 claims, said to show a 4' to 10' vein, carrying auriferous and slightly argentiferous chalcopyrite, arsenopyrite and pyrite. Idle several years and presumably moribund.

**TOM MOORE CONSOLIDATED MINING CO.**

**COLORADO.**

Dead. Succeeded by Tom Moore Gold Mining Co. Formerly at Eureka, San Juan Co., Colo.

**TOM MOORE GOLD MINING CO.**

**COLORADO.**

Office: 1 Wall St., New York, N. Y. Mine office: Eureka, San Juan Co., Colo. Samuel G. Martin, superintendent. Organized, circa 1907, with capitalization \$10,000,000, which is excessive, as successor of Tom Moore Consolidated Mining Co. At last accounts Dennis Ryan, of St. Paul, was suing S. G. Martin for an accounting. Has auriferous and argentiferous lead and copper ore.

**TOMS MINING CO.**

**WYOMING.**

Letter returned unclaimed from former office, West Chester, Pa. Mine office: Encampment, Carbon Co., Wyo. W. H. Taylor, managing director. Lands, 9 miles east of Encampment, have a tunnel and an 85' shaft, said to show good ore. Idle and presumably moribund.

**TONGASS COPPER CO.**

**ALASKA.**

Office: Seattle, Wash. Letter returned unclaimed from former mine office, Ketchikan, Alaska. Is closely connected, in management and ownership, with the Hydah Copper Co. Lands, on Thorn Arm, are said to show copper ore carrying some gold and considerable silver.

**TONOPAH-ALOHA MINING CO.**

**NEVADA.**

Dead. Formerly at Tonopah, Nye Co., Nev.

**TONOPAH COPPER-MINING & MILLING CO.**

**NEVADA.**

Office and mine: care of E. C. Day, vice-president, Tonopah, Nye Co., Nev. E. C. McDow, president; Herman Brunell, secretary and treasurer; preceding officers, Edw. Billings and Col. John W. Carney, directors. Organized October, 1905, under laws of Arizona, with capitalization \$2,000,000, shares 50 cents par.

Lands, 5 claims, area 100 acres, in the Silver Star district of Esmeralda county, about 60 miles west of Tonopah, claimed to show ore assaying well in copper, lead, silver and gold. Company apparently was floated with the assistance of Letson Balliet, a well known promoter of crooked mining companies. Company sent out 200-share stock certificates, apparently at random, with request to recipients to pay \$1 per month thereon. Is not favorably regarded, and apparently is moribund.

**TONOPAH GOLD & COPPER MINING CO.**

NEVADA.

Dead. Formerly at Tonopah, Nye Co., Nev. Fully described Vol. VI.  
**TONOPAH-GREENWATER COPPER CO.**

CALIFORNIA.

Mine office: Greenwater, Inyo Co., Cal. Geo. H. Keyes, president and treasurer; H. D. Danforth, vice-president; Fredk. Tarbell, secretary. Capitalization, apparently \$1,500,000, shares \$1 par. Lands, 8 claims, area 160 acres, said to adjoin the Iron Mask group.

**TONOPAH-NORTHERN MINING CO.**

NEVADA.

Office: 501 O. T. Johnson Bldg., Los Angeles, Cal. Letter returned unclaimed from former mine office, Manhattan, Nye Co., Nev. Capitalization \$1,000,000, shares \$1 par. Lands, claimed to be 130 acres, at South Manhattan, said to have a 100' shaft on a 4' 6" "fissure vein" between porphyry and limestone, bottomed in sulphide ore, giving assays of 6.8 to 34.4% copper, 1.2 to 7 oz. silver and \$2.06 to \$13.22 gold per ton. Idle and apparently moribund.

**TONOPAH-YERINGTON COPPER CO.**

NEVADA.

Mine office: Yerington, Lyon Co., Nev. Organized 1907, under laws of Arizona, with capitalization \$1,000,000. Presumably idle.

**TONTO RIVER COPPER CO.**

ARIZONA.

Office: Pittsburgh, Pa. Mine office: Roosevelt, Gila Co., Ariz. S. V. Thompson, manager. Lands, 79 claims, known as the Schell group, on Tonto Creek, circa 60 miles from Globe, showing well mineralized ledges carrying auriferous copper ores giving high assay values in copper, opened by shafts and tunnels, with circa 750' of workings.

**TOPEKA COPPER CO. OF ARIZONA.**

WYOMING.

Office: 817 Kansas Ave., Topeka, Kans. Mine office: Centennial, Albany Co., Wyo. Wm. Benton, president and general manager; Dr. N. A. Kramer, vice-president; M. F. Reed, secretary and treasurer; G. S. Simons, superintendent; preceding officers and John R. Bellinger, directors; Sydney Bartlett, engineer. Organized March 3, 1906, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par; issued, \$500,000.

Lands, 11 claims, partly patented, area 205 acres, known as the Maudem mine, in the Lake Creek district, showing fissure veins in granite and diorite, and contact deposits between syenite and limestone, ore bodies carrying a little oxidized ore near surface, with sulphides at depth. The property has 4 ore bodies under development, principal vein, the Maudem, of 7' estimated average width, said to be traceable circa 2,100' carrying oxidized ores near surface, with chalcocite, bornite, chalcopyrite and tetrahedrite at depth, estimated to average 12% copper, 1 to 8 oz. silver and \$10 to \$160 gold per ton. The Maudem mine has a 60' shaft and an 820' tunnel, and the Lake Creek mine has shafts of 40' and 70' and tunnels of 265' and 365', property as a whole having circa 1,500' of workings. The Maudem or Joe Davis, and Lake Creek mines, are about one mile apart. Company plans continuing the Maudem tunnel to 1,200' length and adding a light mining equipment.

**TOPEKA MINING CO.**

COLORADO.

Mine office: Russell Gulch, Gilpin Co., Colo. Has gold, silver and copper ores.

**TOQUIMA COPPER CO.**

NEVADA.

Office and mine: P. O. Box 9, Manhattan, Nye Co., Nev. W. J. Stock, president; Omer Maris, vice-president and manager; F. P. Jayne, secretary and treasurer; preceding officers, J. B. Giffen and L. W. Haworth, directors. Organized Augnst, 1906, under laws of South Dakota, with capitalization \$1,000,000, shares \$1 par.

Lands, 7 claims, area 120 acres, east of Manhattan and 34 miles from a railway, showing a mineralized zone apparently of about 600' width, traceable

cirea 2,000'. At surface the mineralized zone shows irregular mixtures of altered schists and coarsely crystalline limestone, with frequent irregular gossans and iron blowouts, with considerable decomposed ferruginous lime, highly friable, with quartz outcrops, all of the various rocks showing carbonate copper stains. Development is by a 180' shaft, at an angle of 65°, on what apparently is the footwall of the mineralized zone, this shaft showing a little bornite, but mainly chalcopyrite below a depth of 20'. Equipment includes a small electric plant, Cornish pump and whim.

#### **TORCH LAKE MINING CO.**

**MICHIGAN.**

Office: care of Thatcher Loring, president, 3-19 Central St., Boston, Mass. Mine office: Leopold Bldg., Houghton, Houghton Co., Mich. Capitalization \$500,000, shares \$25 par. Lands, 1,280 acres, being Sections 35 and 36, town 56 North, Range 33 East, lying east of the Tecumseh and midway between Calumet and Lake Linden. Was slightly prospected, 1899-1900, by diamond drill borings. Since idle.

#### **TORPEDO MINE.**

**NEW MEXICO.**

Office: 135 Adams St., Chicago, Ills. Mine office: Organ, Donna Ana Co., N. M. Geo. E. Wood, president; Harvey E. Rich, secretary; Geo. E. Fitzgerald, general manager; R. E. Pringle, engineer; L. G. Tucker, auditor.

Lands, 16 miles west of Las Cruces, near the Copper Bar mine, carry lenticular ore bodies between limestone and granite, said to be increasing in size with depth. Mine, 500' deep, opened cirea 1876, is said to have produced upwards of 4,000 tons of ore averaging 14% copper, and some second class ore of 6% copper tenor was scammed and shipped from waste dumps. Has steam power. Owing to water inflow of cirea 800 gallons per minute, mine was idle from 1903 until summer of 1907, when shipments of one carload daily were made to El Paso smelter. Was said, August, 1907, to be building a 300-ton matting furnace. Property considered promising.

#### **TORPEDO MINING CO.**

**NEW MEXICO.**

Dead. Property sold, Aug. 11, 1906, to Geo. E. Fitzgerald, et al. Formerly at Organ, Donna Ana Co., N. M. Described Vol. VI.

#### **COMPAÑIA METALURGICA DE TORREÓN, S. A.**

**MEXICO.**

Office and works: Torreón, Viesca, Coahuila, Mex. Ernesto Madero, president and general manager; Col. Carlos Gonzalez, vice-president; Lic. Pragedis de la Peña, secretary; Lic. Pedro Torres Saldefia, treasurer; Joaquin Villegas, comisario; F. S. Villareal, assistant general manager; Donald R. Morgan, general mine superintendent; Ivan Ragaz, assistant mine superintendent; Ernest Harms, general smelter superintendent; C. A. Heberlein, assistant smelter superintendent; Chas. Moser, J. W. Pender and Pedro Vota, mine superintendents.

Organized June, 1901, under laws of Mexico, with capitalization 1,250,000 pesos, increased later to 2,500,000 pesos, and again increased, 1905, to 5,000,000 pesos, shares 100 pesos par, in 1,500,000 pesos 6% preferred redeemable stock, and 3,500,000 pesos common stock. Paid dividends, April, 1905, of 14 pesos on preferred and 12 pesos on common shares. Profits, 1904, were 629,279 pesos, and 1906 were 775,285 pesos. Is controlled by the Madero family.

Lands are extensive, including a number of developed and developing lead mines, and several partly developed copper mines, in northern Mexico. The San Diego and Buena Suerte mines, at Santa Barbara, Hidalgo, produce mainly galena and sphalerite, having a 200-ton concentrator, and employing about 500 men. Las Adargas mine, Jiménez, Chihuahua, has auriferous silver-lead ores, employing about 200 men. La Voladora and La Mitra mines, at Nuevo León, produce silver-lead ores, with a force of cirea 100 men. Las Cabrillas and Las Higueras mines, at Los Muertos, Centro, Coahuila, produce

silver-lead ores, and also have promising deposits of iron ore. Company also holds other silver-lead properties of lesser development.

The smelter, having connections with all railroad lines entering Torreón, is rated at 1,250 tons daily capacity, doing a general custom business on gold, silver, lead and copper ores, in addition to treating the large production of the company's own mines. Smelter has 10 blast-furnaces, including 8 lead stacks and 2 copper stacks, with 8 reverberatory roasters for lead matte, the first-fusion product carrying only 10 to 15% lead, which is calcined and remelted. A converter plant was added, 1907, to the copper plant. The works employ about 600 men.

In 1901 the smelter treated 71,294 metric tons of ore, in 1904 treated 201,612 metric tons, and in 1906 smelted 258,572 metric tons, showing a very gratifying growth. Production, 1907, is estimated at 1,250,000 lbs. fine copper. Company went through the 1907 panic in better shape than perhaps any other Mexican smelter, and is one of the most successful and well-managed metallurgical enterprises in the republic, its success being especially notable because the extensive works are owned and controlled by Mexicans, who have shown their ability to compete, on even terms, with the ablest American and European mining men and financiers.

#### **TORREÓN SMELTER.**

**MEXICO.**

Owned by Compañía Metalurgica de Torreón.

#### **TOSTON COPPER CO.**

**MONTANA.**

Letter returned unclaimed from former office, Pennsylvania Bldg., Butte, Mont. Mine office: Toston, Broadwater Co., Mont. David J. Charles, president; Emil H. Renisch, vice-president; John A. Shelton, secretary; W. K. Edwards, general manager. Organized Dec. 24, 1903, under laws of Arizona, with capitalization \$1,250,000, shares \$5 par. Lands, 6 claims, area 120 acres, showing 3 fissure veins in porphyry, with a 200' shaft in a vein of about 15' average width, carrying chalcopyrite with estimated average tenor of 6% copper, 1 oz. silver and \$2 gold per ton. Idle.

#### **TOTENVILLE COPPER CO.**

**NEW YORK.**

Office: Foot West 29th St., New York, N. Y. Works office: Tottenville, Richmond Co., N. Y. W. M. David, superintendent. Property is a smelting plant and factory for working copper and brass into commercial forms.

#### **TOWADA MINE.**

**JAPAN.**

Owned by Fujita-Kumi & Co.

#### **TRAIL SMELTER.**

**BRITISH COLUMBIA.**

Owned by Canadian Smelting Works.

#### **TRAM MINING CO.**

**WYOMING.**

Mine office: Rambler, Carbon Co., Wyo. J. B. Barriani, president; J. H. Maclin, vice-president; W. G. McClintock, secretary and treasurer. Lands, 8 claims, near the Itmay. Presumably idle.

#### **TRAMWAY MINE.**

**MONTANA.**

Owned two-thirds by Butte & Boston Consolidated Mining Co., and one-third by Butte Coalition Mining Co. Described under name of latter.

#### **TRANSCONTINENTAL SILVER & COPPER MINING CO., LTD. IDAHO.**

Office: 23 West Granite St., Butte, Mont. Letter returned unclaimed from former mine office, Mullan, Shoshone Co., Idaho. Hon. W. W. Woods, president; Geo. E. Marlowe, secretary and treasurer; A. J. Gillis, general manager; preceding officers. Col. Thos. Marshall and Thos. Marlowe, directors. Organized circa 1906, with capitalization \$1,500,000, shares \$1 par. Lands, 10 claims, near the Reindeer mine, south of Mullan, showing a vein of 100' claimed width, producing surface ores assaying up to 14% copper and 3 oz. silver per ton. Has a 110' tunnel.

**TRANSVAAL COPPER CO.****MEXICO.**

Office: 1408 Traction Bldg., Cincinnati, Ohio. Mine office: Cumpas, Moctezuma, Sonora, Mex. Louis J. Hauck, president; Louis Hehman, vice-president; J. M. Eilers, second vice-president; H. C. Beauchamp, secretary; Alfred Vogler, treasurer; preceding officers, Percy Andrae, Bernard Freiberg, F. H. Cloud, Theo. M. Foucar and O. C. Rasch, directors; Jas. T. McDonald, mine superintendent. Organized December, 1901, and reorganized July, 1903, under laws of West Virginia, with capitalization \$6,200,000, shares \$10 par; issued, \$2,700,000.

Lands, 794 pertenencias, area 1,966 acres, also a 50-acre smelter site, and the Cloud ranch, of circa 15,000 acres area, with an interest in the San Nicolás Tolentino ranch, of about 26,000 acres area. The ranches include timber and grazing lands, all property being in the Moctezuma district. The property shows 8 ore bodies, occurring as fissure veins and lenses, on which about 16,000' of development work has been done, with deepest workings circa 600'.

The copper and silver-lead ore bodies occur as fissures, and also as wide mineralized dikes, in trachyte and rhyolite. Copper ores are mainly bornite and chalcopyrite, with occasional chalcocite, carrying the usual oxide and carbonate ores on the outcrops. The ore bodies of the Cobre Rico and Transvaal are mineralized dikes of apparently 200' to 300' width, carrying low grade copper sulphides, associated with iron pyrites and having a quartzose gangue, hence liable to prove silicious and require heavy fluxing. The Cobre Rico and Transvaal No. 1 are estimated by the management to show about 2,500,000 tons of low grade ore.

The Cobre Rico mine has 2 shafts and 2 tunnels, showing ore of concentrating grade, estimated to average about 3% copper, 3 to 4 oz. silver and \$1.50 gold per metric ton. Shaft No. 1 is circa 100' deep and shaft No. 2 is 140' in depth, and the tunnels are of about 2,000' aggregate length. The vein is wide, exposing a considerable amount of ore.

The Transvaal mine has shafts of 210' and 318', with about a mile of tunnels, blocking out considerable ore averaging circa 3% copper, 2 to 4 oz. silver and \$1 to \$1.50 gold per ton. Equipment at the Transvaal includes a steam hoist, 2 Cameron pumps, two 80-h. p. boilers and a Sullivan air-compressor.

The Buckeye mine, opened by tunnel, with about 4,000' of workings, has a vein of 18" to 50" width, said to average circa 12% copper, 10 to 35 oz. silver and \$1.50 gold per ton, with 2,500 tons of ore estimated to be blocked out.

The San Nicolás mine has a 250' shaft and circa 3,000' of tunnels, developing a 4' vein carrying silver-lead values, said to average about 60 oz. silver per ton, with 6,000 tons of ore blocked out for stoping. Equipment includes a steam hoist, two 80-h. p. boilers and a Sullivan air-compressor.

The Ultima Chanza mine is opened by circa 500' of tunnels, showing ore estimated to average about 10% copper, with gold and silver values.

The Virginia mine, having a vein estimated at 15' average width, shows ore carrying gold values estimated as averaging \$12 per ton, developed by circa 1,000' of workings.

The Guadalupe mine carries cupriferous iron ore, used for fluxing the copper ores smelted by the company.

Buildings include an engine-house, boiler-house, shafthouse, machine-shop, office, laboratory, boarding-house, 6 dwellings and a 22x90' general store, with a branch store at the smelter. The company has a hospital, and a \$5,000 telephone system.

Nearest railroad is the Nacozari line, 26 miles distant, but a projected line has been surveyed into the district by the Cananea, Rio Yaqui y Pacifico. The company has laid out about 35 miles of wagon roads and 25 miles of trails, at

a cost of about \$50,000, maintenance of roads and trails requiring about \$5,000 yearly. A small smelter, having a 35-ton reverberatory furnace, located at the Buckeye mine, was blown in, 1905, but closed down shortly, owing to unsatisfactory operation, and was again blown in, circa November, 1905, when it was said to be making a matte carrying up to 65% copper, 55 oz. silver and \$7 gold per ton.

The main smelter, 15 to 20 miles from the mines, at Cumpas, where located because of ample water supply and a good site, has a 150-ton water-jacket blast-furnace, 42x120" at the tuyeres, and a 20-ton reverberatory furnace, with room and power for 2 additional 150-ton stacks. There also is a small sampling mill. The power plant includes three 80-h. p. boilers, a tandem-compound engine and a Connerville blower. This smelter was blown in May 1, 1906, doing a general custom business, producing matte averaging 40% copper, 100 oz. silver and 0.5 oz. gold per ton, shipped to Nichols works for refining.

The smelter was blown out, October, 1907, and the mine closed a little later, remaining idle during 1908. The property is of considerable promise, but obviously cannot be operated at a profit without rail transportation. About 20 miles of narrow-gauge line will be required to connect the smelter with the various mines, and this will not be a cheap line to construct. The smelter also needs direct rail connection for receipt of fuel and shipment of its production. The company's management is composed of solid business men of good standing.

#### **TRANSVAAL COPPER CO., LTD.**

**TRANSVAAL.**

Dead. Formerly in the Subeni River district, Transvaal. Described Vol. VII.

#### **TRANSVAAL COPPER MINES, LTD.**

**TRANSVAAL.**

Dead. Was liquidated, December, 1907. Officers were A. H. Oppenheim, A. Dickson, W. E. Blelock and W. Ross, directors, and F. T. Pressland, secretary. Company was organized Oct. 18, 1905, under laws of Transvaal, with capitalization £70,000, shares £1 par; £55,000 issued. Lands were options on mineral rights to 18 farms, area 50,000 morgen, or circa 100,000 acres, east of Oliphant's River. Formerly in the Middelburg district of the Transvaal.

#### **TRANSVAAL COPPER MINING CO., S. A.**

**MEXICO.**

In the Mexican incorporation of the Transvaal Copper Co.

#### **COMPAGNIE DES MINES DE TRANSYLVANIE.**

**HUNGARY.**

Mine office: Brussels, Belgium. Organized 1903, with capitalization 2,000,000 francs, to develop mines of copper, lead, zinc, ochre, and coal, in Hungary. Presumably idle.

#### **SOCIÉTÉ ANONYME DES CUIVRES DE TRANSYLVANIE.**

**HUNGARY.**

Mine office: Budapest, Hungary. Comte de Choulet, chairman. Organized Aug. 25, 1907, under laws of Hungary, with capitalization 5,000,000 crowns, shares 100 crowns par.

#### **GEWERKSCHAFT TRAUTENSTEIN.**

**GERMANY.**

Mine office: Benneckenstein in Harz, Braunschweig, Germany. A. Polednick, manager, at last accounts. Has 2 shafts, the Gertrude, of 36 meters, and the Silber-Marie, of 162 meters, developing ores carrying zinc, lead and copper.

#### **TRAVERS CONSOLIDATED MINING CO.**

**MEXICO.**

Dead. Title changed, 1905, to Travers-Durkee Coppers. Formerly at Moctezuma, Sonora, Mex.

#### **TRAVERS-DURKEE COPPERS.**

**MEXICO.**

Office: 805 Bookery Bldg., Chicago, Ills. Mine office: Moctezuma, Sonora, Mex. Richard P. Travers, president; Henry R. Durkee, secretary and treasurer; preceding officers, Francis H. Leggett, W. C. Travers and F. S. Lewis, directors; Thos. Travers, superintendent.

Organized June 14, 1905, under laws of Arizona, as Travers Consolidated Mining Co., with capitalization \$6,000,000, increased October, 1905, to \$15,000,000, shares \$10 par, and name changed, December, 1905, to present title. Western Trust & Savings Bank, Chicago, registrar and transfer agent. Annual meeting, first Tuesday in June.

On Feb. 23, 1907, the company borrowed, of the Copper Queen Consolidated Mining Co., \$300,000, at 6%, on notes payable one-half in 2 years and one-half in 3 years, secured by mortgage, the company giving the Copper Queen notes for \$300,000 and a bonus of 100,000 shares of stock, for \$225,000 cash. The company is said to have settled all deferred payments on the property from proceeds of money borrowed from the Copper Queen. Mr. Travers is said to have promised a dividend for January, 1909, but if so, the promise is not likely to be redeemed.

Lands, 11 groups, area, 1,410 acres, 3 miles from the forks of the Yaqui river, also a 12,000-acre ranch, surrounding the mineral lands, bought, 1906, for about \$25,000, and the Marguerite and Inez claims, adjoining the mineral lands. Property includes the Promontorio mine, in the Promontorio Mountains, circa 35 miles southeast of Moctezuma, and about 80 miles from the nearest railway at Nacozari. The Promontorio is an antigua, said to have produced the copper from which were cast the bells on the old church at Moctezuma, built A. D. 1640. During the American Civil War some bornite from this mine was packed, on mules, 40 miles, to Guaymas, and shipped to Swansea, for smelting.

The Promontorio shows diorite, granite and limestone, carrying ore bodies in a shear zone between granite and diorite. The company reports one ore body, under development, as circa 300' wide, carrying a 30' paystreak estimated to average 20% copper, with circa 12.5% copper for an additional 60' and 2.25% copper for balance of 210', with 3 oz. silver and \$4 gold per ton in high-grade ore and circa 2 oz. silver per ton in the low-grade ore, high-grade ore being chiefly bornite and low-grade ore disseminated chalcopyrite. Company also claims that 10' of the ore in the 30' paystreak will average above 40%, being massive bornite. Prof. W. A. Crosby states that the facts indicate an ore body of practically 50' width, 1,000' or more in length, and of indefinite depth, bordered by a broader zone of relatively low-grade ore, in diorite, grading insensibly into the rock walls. The low-grade zone is upward of 200' in width, with a granite footwall, also carrying low-grade impregnations of copper. Dr. Franklin Carpenter states that the zone of secondary enrichment may be expected to continue to considerable depth. The claims put forth by the company are excessive, as, although there is considerable bornite shown in the mine, the average grade of ore is too low in copper tenor to stand shipment, and should be concentrated or smelted on the ground, if it is to be worked at a profit.

Development, 1906, consisted of a 125' shaft and tunnels of 175' and 520' with total workings of 1,125', estimated to show 360,000 tons of high-grade ore, and 1,440,000 tons of low-grade ore, which figures are excessive. The property is well situated for development by tunnel.

The Inez mine shows a large gossan, mined for flux, underneath which is eupriferous pyrrhotite, carrying small gold and silver values, and the Inez is also to have another ore body of promise, carrying auriferous and argentiferous copper ore.

The mine has been developed, without steam power, by tunnels, but the company has planned utilizing a large available water power on the Yaqui river.

The company has a 7-mile narrow gauge railway, laid with T-rails, leading from the mine to the smelter, and thence to the valley, connecting by wagon

road with Nacoza. The projected Yaqui river branch of the Southern Pacific Railway is surveyed to pass a short distance from the Promontorio mine.

The smelter, planned to have a 75-ton water-jacket blast-furnace, was expected to be blown in November, 1907, but at last accounts was not completed, part of the material not being on the ground.

A little production has been secured, from high-grade ore, shipped to smelters at Douglas and El Paso. Apparently the company has failed to carry out its very liberal promises as to production and development, and presumably is idle, and in all likelihood is in poor shape financially.

#### **TRAVERSELLA MINES, LTD.**

#### **ITALY.**

Dead. Voluntarily wound up, December, 1902. Formerly at Traversella, Torino, Piedmont, Italy. Described Vol. III.

#### **TRAVONA MINE.**

#### **MONTANA.**

Office and mine: Butte, Silver Bow Co., Mont. Hon. W. A. Clark, owner; Hon. Jerry Connolly, manager. Lands, 2 claims, 1 fractional, area 34 acres, said to have produced about \$1,000,000 worth of silver ore. Is under bond, expiring Aug. 14, 1909, to Messrs. Connolly and associates, who must pay the usual royalty and deepen main shaft 100', from present depth of 200'.

#### **TREMONT-DEVON COPPER CO.**

#### **MICHIGAN.**

Office: First National Bank Bldg., Hancock, Mich. Mine office: Victoria, Ontonagon Co., Mich. Hon. Chas. Smith, president; Fred H. Begole, vice-president; preceding officers, Jos. Bosch, Jas. B. Cooper, Henry L. Baer, Robt. T. Dunstan, and Chas. D. Hanchette, directors. Organized December, 1908, under laws of Michigan, with capitalization \$2,500,000, shares of \$25 par. Lands, 680 acres, including the old Tremont and Devon mines, directly west of the Victoria. The company plans prospecting work, with a view to locating the probable western extension of the amygdaloidal bed now under development by the Lake Copper Co.

#### **TRENTON MINING CO.**

#### **ARIZONA.**

Office: 1028 Tribune Bldg., New York, N. Y. Mine office: Patagonia, Santa Cruz Co., Ariz. Melvin Stephens, president; Jas. Vausiden, vice-president; G. Dillingham, treasurer; preceding officers, Abraham Vausiden, Peter Vausiden, C. W. Henderson and H. W. Mason, directors. Capitalization \$500,000, shares \$1 par, in \$300,000 of 7% preferred and \$200,000 of common stock. Was a reorganization of the Arizona Gold & Copper Co. Lands, 7 claims, area 140 acres, 8 miles west of Patagonia, in the Tyndall district, having about 1,200' of workings, including several shafts and a tunnel, latter showing a 12' vein carrying ore assaying 3% copper, 3 to 15% lead and up to 10 oz. gold per ton. Has a concentrator and is said to have an 80-ton smelter.

#### **TRENTON MINING & DEVELOPMENT CO.**

#### **MONTANA.**

Office: 42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. Employs circa 300 men. John D. Ryan, managing director; John Gillie, general superintendent; Geo. F. McGee, mine superintendent. Organized circa 1905, under laws of New Jersey, with capitalization \$2,500,000, as Colorado Mining & Smelting Co. and name changed, circa 1905, to present title. Is controlled, through ownership of entire stock issue, by Amalgamated Copper Co. Net earnings were \$481,826 for fiscal year 1907, and \$67,259 for fiscal year 1908.

Lands, 35 quartz and placer claims, mainly fractional, area 220 acres, in the western limits of the Butte copper zone, including the Gagnon and Otisco mines, carrying argentiferous and highly zinciferous copper ores, averaging circa 2.75% copper and 3.5 oz. silver per ton.

The Gagnon mine has a 2,300' three-compartment shaft, sunk at an angle of 74°, the shaft being only 150' from the Original shaft, the Gagnon, which carries the continuation of the Original vein, showing good ore in the bottom workings. There also is an air-shaft of 1,800', circa 700' west of the Gagnon.

shaft. The mine is timbered with square sets, has electric call bells, and is connected underground with the Original mine. The Gagnon mine has 3 Aldrich electric quintuplex pumps, with capacity of 100, 200 and 425 gallons per minute, working against a 1,000' head.

Equipment at the Gagnon includes a 22x48" Dickson hoist, raising 2 double-deck cages for men, which are changed, for hoisting ore, to 2 single-deck cages, with two 3-ton skips swung under, hoisting with 1½" round steel cable. There is a 20-drill Rand air-compressor.

The reduction plant, at Butte, includes a small concentrator and furnaces with 750 tons daily capacity, but lacks a converter plant. These works did a general custom business, in addition to treating the company's ores, until closed, 1905, since which time the company's ore has been sent mainly to the Washoe works, at Anaconda. The old reduction plant is held in reserve, for emergencies, but otherwise is unlikely to be used again.

Production of ore was 146,954 tons for fiscal year ending June 1, 1907, and 85,260 tons for fiscal year 1908, the 1907 production giving a gross yield of \$9.96 per ton. Production, 1907, is estimated at 7,000,000 lbs. fine copper.

#### TRENTON-SONORA MINING CO.

MEXICO.

Office: Trenton, N. J. Mine office: Tarachi, Sahuaripa, Sonora, Mex. F. C. Garretson, general manager. Property includes the San José, Santa Eduviges, El Porvenir and other mines, carrying copper, silver and gold ores, developed mainly by tunnel, the San José mine showing an 18" paystreak of highly auriferous chalcocite.

#### TRES AMIGOS GOLD MINING CO.

MEXICO.

Mine office: Temosáchic, Guerrero, Chihuahua, Mex. B. L. Croff, general manager. Is developing by tunnel, on a vein of 25' to 40' width, claimed to carry ore averaging 6% copper, 4 oz. silver and \$10 gold per ton.

#### MINA TRES GRACIAS.

CHILE.

Office and mine: Chañaral, Atacama, Chile. Basilio Cáceres, owner; Roberto Cáceres, manager. Has steam power, employing circa 100 men at last accounts.

#### TREVEDDOE MINING CO., LTD.

ENGLAND.

Office: 13 Throgmorton Ave., London, E. C., Eng. Mine office: Bodmin, Cornwall, Eng. Col. Wm. F. Leese, chairman; R. Arthur Thomas, engineer; Wm. H. Adams, secretary. Organized Aug. 13, 1900, under laws of Great Britain, with capitalization £100,000, shares £5 par; issued, £95,000. Debentures, £17,500 authorized, £16,000 outstanding, at 5%. Lands, 500 acres, held on 100-year lease, subject to rental and royalty, bearing tin and copper ores. Production, 1902, was 60 tons of black tin and 175 tons of 7% copper ore. Operations, 1904, resulted in a net loss of £2,250, and for 1906 gave a profit of £158.

#### TRIANGLE MINES CO.

ARIZONA.

Mine office: McCabe, Yavapai Co., Ariz. Organized 1905. Lands, 7 claims, at McCabe, having a 378' shaft showing auriferous copper sulphides, of fair assay tenor. Idle at last accounts, because of legal troubles, which are said to have been straightened out.

#### TRI-BULLION SMELTING & DEVELOPMENT CO.

ARIZONA, MONTANA & NEW MEXICO.

Office: 2 Rector St., New York, N. Y. Western office: 1305 Chamber of Commerce Bldg., Chicago, Ills. Mine offices: Kelly, Socorro Co., N. M., and San Carlos, Gila Co., Ariz. Hon. Howard Paschal, president; Louis O. Hedden, vice-president; Edgar Wiggins, secretary; John W. Dundee, treasurer; Louis J. Pierson, resident director; Samuel W. Taylor, general manager; preceding officers, Hon. J. B. Gorliss, Dr. R. J. Marshall, Warren Curtis, Sr.,

and Richard T. Green, directors; Woolsey McA. Johnson, consulting engineer; R. W. Bull, superintendent.

Organized 1903, under laws of Arizona, with capitalization \$5,250,000, shares \$1 par, and capitalization changed, 1906, to \$5,250,000, in \$250,000 preferred and \$5,000,000 common stock, shares \$5 par. The preferred cumulative stock has dividends in arrears since 1908. At end of fiscal year June 30, 1908, the company had in cash, notes and bills receivable, \$32,000, with 3,000 tons of high-grade ore and 25,000 tons of milling ore extracted, estimated as worth \$220,000.

Lands include a zinc property in New Mexico, copper lands in Arizona and the Tri-Bullion group of copper claims in Jefferson county, Montana.

The Tri-Bullion group, area 180 acres, in the Pipestone district of Jefferson county, Montana, was said, 1907, to have 800' of shafts and opencuts. Apparently this has been idle for some time.

The Arizona claims include the Tri-Bullion group of 8 gold and silver claims, apparently idle, and the Starlight group of 14 copper and lead claims, latter located in Godless Gulch, in the Stanley Butte district, 8 miles south of San Carlos. The Starlight mine was discovered 1886, but was not opened until 1903, because a part of the San Carlos Indian Reservation, until lands were segregated, 1901. The Starlight group shows porphyry, quartz, granite and limestone, carrying 3 known ore bodies, of 3' estimated average width, having oxidized ores estimated to average 8% copper, 10 oz. silver and \$4 gold per ton, with more or less lead, zinc, antimony and bismuth, with some ore assaying up to 8% copper, 40% lead, 10 oz. silver and \$3.50 gold per ton. The ore is low in silica and rich in lead and iron, rendering it self-fluxing, notwithstanding the existence of highly deleterious elements. The Starlight mine has shafts of 140' and 200', and a tunnel, planned to connect with the vein at 1,000', giving a back of 500'. The Will Ryan group has a 1,200' crosscut tunnel, said to show considerable quantities of low-grade ore. The Starlight group shows the wreck of an ancient adobe smelter, remaining from old operations by Mexicans or Spaniards.

The Kelly mine, which is the company's principal property, area 13 claims, near Magdalena, is primarily a zinc mine, with considerable lead values, but carries some copper, the upper working showing mainly zinc carbonates. First grade lead ore is said to run 20 to 25% zinc, and 8 to 12% lead, and zinc ore is said to average up to 2% copper, 32 to 35% zinc, 3% lead, circa 8 oz. silver and 75 cents gold per ton. There is evidence of increasing copper values with depth. Development is by the Kelly, Paschal and Traylor shafts, latter, of 3 compartments, with a steel gallows-frame, being said to show a 40' ore body on the 300' level. The Nit mine, adjoining the Graphic, is said to show a body of heavy sulphide ore. The company estimated, early 1907, that by the end of the year it would have enough ore blocked out for 10 years' production.

Equipment at the Kelly mine includes a power-house with three 150-h. p. boilers, an 18x36" first-motion double-cylinder double-drum hoist, and a 15-drill Ingersoll-Rand air-compressor.

In 1907 the company planned building a 50-ton plant, at Cañon City, Fremont Co., Colo., to make zinc-lead pigment and zinc oxide, but apparently construction of this plant has been abandoned.

The mill, at the Kelly mine, built 1907, by the Traylor Engineering Co., apparently was not a success, and was remodeled and enlarged, 1908, and was planned to go into commission circa January, 1909.

The Kelly mine is leased, above the fourth level, to Coney T. Brown, but work was resumed by the company, November, 1908. The management gave consideration, 1908, to exchanging stock of the company for stock in the

**Kelly Smelting & Refining Co.**, owning property near the Kelly mines in New Mexico, and in Jefferson county, Montana, but this plan was unpopular with shareholders, and apparently was dropped. Many shareholders are dissatisfied with the management, and have proposed an investigation. Property considered promising.

**TRIMETALLIC MINING, SMELTING & REFINING CO. MEXICO.**

Office: care of P. Sandoval, treasurer, Nogales, Ariz. J. L. Shepard, president. Lands, 9 groups of claims, in the Ures and Hermosillo districts, Sonora, Mexico, with a government concession for the equivalent of about 100,000 miners' inches of water from the Yaqui river, which, under an effective head of 160', could be made to develop a large water-power. Lands show auriferous and argentiferous copper ores. Property considered promising. Presumably idle.

**TRIMOUNTAIN MINING CO. MICHIGAN.**

Office: 82 Devonshire St., Boston, Mass. Mine office: Trimountain, Houghton Co., Mich. Employs circa 800 men. Wm. A. Paine, president; Frederic Stanwood, secretary and treasurer; Frederick W. Denton, general manager; preceding officers, J. Henry Brooks, Chas. A. Snow, Chas. H. Paine and John R. Stanton, directors; John Jolly, superintendent; Edw. Koepel, mill superintendent; H. T. Mercer, engineer; Benj. D. Noetzel, clerk; Richard Bowden, mining captain; Jas. Vial, master mechanic at mine; Jas. Richards, master mechanic at mill; Will Harris, supply clerk.

Organized 1899, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; paid in, \$20. Is controlled, through ownership of 99,135 shares, by Copper Range Consolidated Co. Old Colony Trust Co., Boston, registrar. Annual meeting, second Wednesday in February.

The company paid \$300,000 dividends, under a former management, and paid a \$5 dividend, of \$500,000, Apr. 22, 1908, this being the first under the present management. Mining profits, 1907, were \$491,480.76, with a construction account of \$66,084.29, and net earnings for year were \$380,302.15, company ending 1907 with a surplus of \$1,086,299.64. The final installment on the Trimountain debt was paid January, 1908, by A. C. Burrage, as per agreement.

Lands, 1,120 acres, being the E.  $\frac{1}{2}$  of Section 19, W.  $\frac{1}{2}$  of Section 20, N.  $\frac{1}{2}$  of Section 29, and NE.  $\frac{1}{4}$  of Section 30, all in T. 54 N., R. 34 W. The Baltic mine is to the north, and the Champion to the south, with undeveloped lands to the east and west.

Owing to a very heavy sand overburden surmounting the ledge, the mine was opened by sinking drop-shafts through the alluvium, raising thence to surface on the angle of dip of the bed. The Baltic lode runs 15' to 50' wide on the Baltic tract, with an average width of about 25', usually being well mineralized throughout, mass and barrel copper occurring near the walls. Masses upwards of a ton in weight have been found, but values occur mainly in stamp-rock. The two end shafts, toward the Champion and Baltic mines, are better than those in the middle, but there are prospects of better copper values with depth, and a slow but fairly steady improvement has been noted, for two years past. The mine has electric pumps, and, during 1907, made 7,528' of new openings. The shafts are all of the same size and style, being 8x22' outside of timbers, with 3 compartments, framed with 14x14" sticks, exceptionally heavy timbering being required to withstand the pressure of shifting sand above the solid rock. Shafts 1 and 4 are the chief producers.

Lying parallel with and circa 65' west from the Baltic lode is a very wide amygdaloidal bed, carrying some heavy copper and considerable stamp rock. This, opened by a crosscut from the 7th level of No. 1 shaft, has been explored to some extent, but nothing of great importance found. The great average width of the lode has led to successful experiments in dry-walling with waste.

**rock.** Though at first ridiculed by some conservative mine managers, the use of culs for underground walls has proven its worth in the mines of the Baltic lode, and is being adopted quite generally in other Lake Superior mines. Waste-rock is used also for building underground chutes. These are roughly circular, with inner diameter of about 5', and are built and filled about with waste, as stopes are carried upward, the chutes being built at a sharp pitch. It was feared that descending rock might catch upon projections of the inner wall, of rough mine-rock, but in practice no such trouble occurs, the wedging of surrounding waste-rock serving to hold the walls immovable. The saving in timbering resulting from the use of dry-walling and mine-rock chutes is very great.

No. 1 shaft, 1,675' deep, Jan. 1, 1908, sunk at an angle of 68°, is 210' north of the Champion boundary line. This shaft has a sand overburden of about 40' depth, with first level opened 168' below the collar, levels being 100' apart from thence downward, No. 1 shaft developing a long stretch of exceptionally uniform stoping ground, of good average grade. Equipment at No. 1 includes a 2,500-h. p. Nordberg direct-acting duplex hoist, with 36x72" cylinders and double-conical drum, of 18'-maximum diameter, with capacity for raising 6-ton skips from one mile depth. The shaft-rockhouse is of wood.

No. 2 shaft, 1,023' northeast of No. 1, was 1,575' deep, Jan. 1, 1908, sunk at an angle of 68°, with a steel and concrete collar, built 1907. This shaft shows improving ground below the 14th level. The shaft-rockhouse, 40x62' on the ground, and 84' high, of steel frame, iron sheathed, has 2,000-ton rock-bins, equipment including an engine, steam-hammer and two 18x24" crushers. The hoist is a duplicate of that at No. 1.

No. 3 shaft, 1,027' northeast of No. 2, sunk at an angle of 68°, was 1,425' deep, Jan. 1, 1908. This shaft has a sand overburden of about 60', and ground is much disturbed below the 2d level, but the formation becomes more settled at greater depth, where better stopes are shown, and there is a material improvement in values below the 14th level. Equipment includes a shaft-rockhouse and hoist that are duplicates of those at No. 2.

No. 4 shaft, 1,100' deep, Jan. 1, 1908, shows some of the best stopes in the mine. The shaft-rockhouse is a duplicate of those at shafts 2 and 3, but the hoist is a temporary engine, good for a quarter-mile depth, which is to be replaced, eventually, by a hoist similar to those at the three other shafts.

No. 5 is merely the site for a shaft, there being an overburden of sand, mixed with boulders, 208' in depth, which best could be penetrated by an up-raise.

No. 6 also is merely a tentative site for a shaft, so located as to develop the Trimountain territory to the Baltic line.

The principal mine buildings and machinery, in the neighborhood of shafts 2 and 3, include a 32x45' machine-shop, 40x60' carpenter-shop, 25x45' smithy and 30x60' warehouse. There is a 35-drill cross-compound Head air-compressor at No. 2 shaft, with a Deane condensing plant in a separate building adjoining. At No. 3 shaft the power plant, in a 68x180' steel building, includes a battery of Stirling water-tube boilers and a 4,500' Nordberg air-compressor, guaranteed to run 45 drills only, but actually running 65 drills, 10 pumps and sundry pneumatic machinery, giving a total duty equal to running 90 drills, or twice the rated capacity. At No. 3 there is a large coal trestle, supplying fuel to the boiler-room, and a cistern near No. 2 shaft stores water from a small brook for the boilers. A house over the cistern has a fire-pump, with hose, for defense of the mine buildings. The mine has a branch of the Copper Range telephone system.

The mine is served by the Painesdale branch of the Copper Range railway, which reaches all shafts and the principal shops.

The mine location, which is well improved with macadamized roads, and is very neat in appearance, includes a large boarding-house, upwards of 100 dwellings and a general store and meat market having branches at the mill-site. The company maintains a hospital and nurses' home. There is a water system, with 10" mains, furnishing water for domestic use and fire protection.

The mill, 176x205' in size, of steel frame on stone foundations, occupies a 100-acre millsite at Beacon Hill, 2 miles west of Redridge, having about 2 miles frontage on Lake Superior. The mill has 4 steeple-compound Nordberg stamps, of which 2 are in use. Complementary machinery for each stamp includes crushing rolls, installed 1907, 36 improved Hodge jigs, 6 slime tables and 1 Wilfley table. No. 3 head was reset, 1908, on a solid concrete base, removing the old foundation, consisting of 3 tiers of 14x14" timber, the change entirely eliminating vibration, and under test this head has stamped 900 tons in 24 hours, heads having a normal capacity of about 800 tons daily each. Tailings losses, originally as high as 0.50 to 0.65%, were reduced later to 0.32%, and, 1908, were reduced to 0.26%, by the installation of regrinding rolls and settling tanks. The mill has a 300-h. p. engine, and a small but complete machine-shop on the second floor.

The mill boiler-house, of steel, has six 250-h. p. and two 200-h. p. Stirling boilers, latter maintaining a steam pressure of 180 to 200 lbs. per square inch, which is the highest carried at any mill in the district. The boiler plant has a brick-lined self-supporting steel smokestack, 165' high and 7' 6" in diameter. At the rear of the boiler-house are 3 coal trestles, under each being a 6x7' tunnel, 400' long, leading to the boiler-rooms, the floors of the sheds forming the roofs of the tunnels. Feed-water for boilers is piped from a small stream, dammed 1,000' distant.

The steel pump-house at the mill has a 20,000,000-gallon Nordberg pump, taking water from a well connected with a 40" riveted steel pipe, running 1,400' to an intake crib in Lake Superior. The crib, built of heavy timbers and braced by iron rods, is 42x56' on the bottom and 31' high, sunk in 21' of water, weighted with 1,800 tons of rock, and anchored into the sandstone bed of the lake by heavy iron rods. The 40" intake pipe is laid on the floor of the lake from the crib until shallow water is reached, and is anchored to the rock bed of the lake by eye-bolts. The 500' section of this line nearest shore was laid in a 14' trench, covered with cement, sunk in sacks, but this protection proved inadequate against heavy shore ice, and was replaced, 1908, by a reinforced concrete covering, for a distance of 250'.

The mill buildings include a smithy and carpenter-shop, each 18x30', and a 24x36' warehouse. The townsite of Beacon Hill, lying on the slope above the mill, has a number of dwellings, and mill buildings and townsite are lighted by electricity, supplied by a dynamo in the engine-room of the mill.

Production was begun Jan. 4, 1902, with one leased head, at the Areadian mill, a second leased head being started in April. Two heads in the Trimountain mill were started in 1902, and the third and fourth heads were started in 1903. The Trimountain began production with returns of 37 lbs. fine copper per ton, but fell off, later, to 27 lbs. per ton, and, when the present management assumed control, the production fell sharply, from 27 lbs. to 18 lbs. fine copper per ton. The reason for this sudden decrease in returns is not far to seek, as Thos. W. Lawson, formerly the owner of a majority of the Trimountain stock, forced the old management to operate the mine on a radically wrong basis. The mine was gonged, rich rock removed and production maintained at a high level, through willfully robbing the mine, at the expense of its future, and, by these tactics, dividends aggregating \$300,000 were squeezed out, in 1903, yet the mine was turned over to the Copper Range with a floating debt of upwards

of \$750,000, and it required five years to put the Trimountain back on a dividend basis.

Production has been as follows: 9,237,051 lbs. fine copper in 1903; 10,211,230 lbs. in 1904; 10,476,462 lbs. in 1905; 9,507,933 lbs. in 1906; 8,190,711 lbs. in 1907. In 1907 the mine hoisted 506,805 tons of rock, discarding 62,447 tons, or 12.3%, and stamped 444,358 tons, which yielded 12,729,445 lbs. mineral and 8,190,711 lbs. fine copper, an average return of 18.43 lbs. fine copper per ton. For 1907 working expenses were \$1.96 per ton, or, including taxes, \$2.06 per ton, and cost of finished copper, delivered, was 8.82 cents per pound, sold at an average price of 17.78 cents per pound. At end of 1908 production was circa 1,500 tons of stamp-rock daily. The Trimountain, while it has proven somewhat disappointing, has reached a point where its future may be considered assured, thanks to a highly efficient and capable management.

#### **COMPAÑIA MINERA LA TRINIDAD.**

**MEXICO.**

Office: care of Sr. D. José Luis Requeña, presidente, Mexico, D. F. Mine office: Charcas, Moctezuma, San Luis Potosí, Mex. Luciano de la Rosa, manager. Capitalization 300,000 pesos, shares 1 peso par. Lands include the San Agustín mine, area 20 pertenencias, with an 80-meter shaft, also a mine with a 105-meter shaft, with steam hoist. At last accounts was producing daily about one carload of ore carrying 4 to 5% copper and 700 to 1,000 grams silver per metric ton. Employs about 40 men.

#### **TRINIDAD MINING CO.**

**MEXICO.**

Office: 710 Lankershim Bldg., Los Angeles, Cal. Mine office: La Trinidad, Sahuaripa, Sonora, Mex. D. Richardson, manager. Has auriferous and argentiferous copper ore, with steam power and a 50-ton mill, and is said also to have a 10-ton smelter.

#### **TRINIDAD MINING & SMELTING CO.**

**MEXICO.**

Mine office: Arcelia, Aldama, Guerrero, Mex. B. Davidson, mine manager. Has silver-lead ores carrying gold and copper values. Property includes the Luisa, Salvación, Sorpresa and Trinidad mines, carrying silver-lead ores, with gold and copper values. Has steam power and a 20-ton mill, employing about 50 men, at last accounts.

#### **TRINITY COPPER CO.**

**CALIFORNIA.**

Office: 33 State St., Boston, Mass. Mine office: Kennett, Shasta Co., Cal. Thos. W. Lawson, president; Arnold Lawson, vice-president; Homer Albers, secretary; Allen Arnold, treasurer; R. N. Bishop, general manager; preceding officers, Louis Auerbach, Arthur P. French, Henry H. Arnold, Frank E. Chase and Kenneth K. McLaren, directors.

Organized Oct. 18, 1900, under laws of New Jersey, with capitalization \$6,000,000, shares \$25 par. American Loan & Trust Co., Boston, transfer agent; International Trust Co., Boston, registrar.

Lands, 1,700 acres, also a patented townsite, near Kennett, with total holdings of 3,233 acres, a smelter site of 422 acres, formerly owned, having been sold to the Mammoth. Property includes the Shasta King, which is the principal mine, the Lost Desert group, and the King Copper group.

The Shasta King group, area 12 claims, is on the south fork of Squaw Creek, adjoining the Balaklala, 4 miles east of Iron Mountain. The mine is located in a deep gulch, topography being favorable for opening by tunnels, which are used exclusively for development. The main tunnel, 1,145' long, is 7x8' in size, with double tram-tracks, equipped with steel ore-cars, and a 7x8' double-track tunnel has been driven 175' vertically lower. The mine had, 1906, circa 7,500' of workings, which have not been greatly increased since, and the property has been tested by 5,119' of diamond-drill borings. The ore body is a lens, claimed to be approximately 150' wide by 1,000' long, and of unknown depth, but apparently the ore does not go to great depth, and it is possible

that the bottom limits have been reached. The mine was claimed, by the management, to have circa 1,200,000 tons of ore in sight, with nearly 500,000 tons blocked out for stoping, but this statement was denounced, by Lewis E. Aubury, State Mineralogist of California, as a gross and willful prevarication. The management now claims that the Trinity has about 900,000 tons of ore in sight, but independent observers give very much lower estimates, and it seems probable that the property has ore reserves of at least 400,000 tons, with fair chances of 750,000 tons, and possibilities of a greater tonnage. The crosscut tunnels, driven in from the sides of the mountain, connect with drifts on the ore body, which is low grade disseminated chalcopyrite, variously estimated as from 1 to 4% in copper tenor, with combined gold and silver values of about \$1 per ton. The ore carries small quantities of zinc and an excess of iron, and probably averages about 2.5 to 2.75% copper and 1 oz. silver per ton, with small gold values. The Trinity also has an ore body of undetermined size on the opposite side of the gulch from the Shasta King.

The Shasta King mine has an incline tramway of circa 2,000' length, leading from the mine to the head-house of the Balaklala tramway, with ore-bins at the mine, the tram-line having about 500 tons daily capacity.

The King Copper group, of 22 claims, on Motion Creek, circa 2½ miles south of the Shasta King, had about 1,000' of development work, at last accounts, but apparently no ore had been found in place.

The Statesman group has been partially explored, with a view to locating and developing silicious ores required for fluxing the heavy sulphide ores of the Shasta King mine.

The Uncle Sam group, held under bond and lease, also has been explored for fluxing ores, the Shasta King having large bodies of low grade copper pyrites, but lacking the silicious ores required to make free-smelting furnace mixtures. The Uncle Sam group shows some oxidized ore, at and near surface, of 3 to 8% copper tenor.

Equipment includes a steam plant, with a 6-drill air-compressor and power drills, and there also is a diamond drill. Buildings include a \$20,000 office building, assay office, warehouse, shops, hospital, and about 25 dwellings for employees.

The company made a bluff at building a smelter, 1901, doing some grading at the time, but as the Trinity was worked mainly for the benefit of the stock market, grading was discontinued, and the site sold, now being occupied by the Mammoth smelter. At the company's annual meeting, February, 1905, the president was authorized to build a smelter, "according to specifications submitted by general manager Brown," but this smelter also vanished into thin air, like its predecessor. If printers' ink would build smelters, the Trinity would have them aplenty.

Ore production was begun, Sept. 25, 1907, apparently at the rate of 150 tons daily, but apparently none of this ore got to the smelter, and the mine began production again, circa October, 1908, after nearly a year of practical idleness, with ore shipments of approximately 150 tons daily.

The Trinity was said to have had a contract with the Balaklala, calling for the treatment of 308,000 tons of ore for the first year, and 360,000 tons yearly for 9 succeeding years, but apparently this contract actually called for a minimum of 300 and a maximum of 1,000 tons daily, which, so far as can be learned, was to be matted for \$3 per ton. Apparently it is undetermined what stand the First National Copper Co., successor of the Balaklala Copper Co., will take regarding the contract of the Trinity with the Balaklala, but Mr. Lawson is president of both corporations, so anything may be expected. Late 1908 the Trinity was said to be working about 75 men, at the Shasta King mine, and to be shipping considerable ore. It is not com-

sidered likely that Trinity can produce copper for much if any less than 15 cents per pound, and the cost may be higher.

The management of the Trinity claimed, when the shares were listed on the Boston Stock Exchange, to have \$745,047 cash in the treasury, and also claimed to have 80,000 shares of stock in the treasury, but the first balance sheet made public by the company, of date Feb. 19, 1907, showed that the treasury stock had disappeared mysteriously, this balance sheet giving assets of \$5,221,000 in lands, which possibly is a trifle inflated, for the reason that the mine is said to have been bought by Lawson for \$165,000 and a stock consideration, and was capitalized, with the innate modesty that so distinguishes this great reformer and philanthropist, at \$6,000,000, this being Lawson's idea of the square deal to his followers. The company's balance sheet, of Sept. 30, 1907, showed accounts receivable of \$895, and cash \$40,705, while balance sheet for Sept. 30, 1908, gave cash resources of \$282, with \$895 in accounts receivable. This seems about the Trinity's measure. The company's annual statements are very unsatisfactory, and no adequate explanation has been given for the disappearance of the fund originally on hand for construction of a smelter. The Trinity has progressed backwards in a remarkable manner, its large cash surplus having sunk practically to the point of disappearance, while its 80,000 shares of treasury stock have disappeared completely, leaving no trace behind of the smelters promised at various times, these not only having failed to materialize, but even the hole where the first smelter was to be built having disappeared also. In this connection, the Copper Handbook repeats its criticism of the Boston Stock Exchange, which has lent itself to Lawson's crookedness by listing this utterly rotten stock. The Boston Stock Exchange generously permitted Lawson to list the balance of 80,000 shares of Trinity stock, early 1905.

In the prospectus of the Trinity Copper Co., issued Oct. 20, 1900, Lawson predicted that from August, 1901, the net earnings would be "at least" \$2,000,000 or \$8,000,000 yearly, and by that time "at least" \$30,000,000 worth of ore would be blocked out. These predictions have proven as accurate and truthful as others from the same source. When Lawson put out this stock he gave a personal "guarantee" that the stock would not sell below \$25, but it has declined repeatedly to a mere fraction of this figure. Lawson stated, in an advertisement, Jan. 17, 1907, that he had always kept the finances of the Trinity in the hands of others, and never, directly or indirectly, had the handling of them. This is important, if true.

Arnold Lawson was elected a director before he was a shareholder, and Thos. W. Lawson, philanthropical promoter-president, was on record, at the annual meeting, 1907, as the owner of only 200 shares, which shows the virtuous Lawson to be a very wise personage, as he unloaded, shortly before, on "investors," throughout the country, at prices as high as \$14 per share.

To show what an utterly conscienceless scoundrel Lawson is, the following murderous suggestion is taken from one of his advertisements, of February, 1907, referring to Mr. C. W. Barron of the Boston News Bureau. "In such a cause the law can or will do nothing. If it were not for the law, this power would meet its death as does a skulking hyena. Some day following disaster caused by Boston News Bureau—disaster like that of Saturday, for instance—some victim less considerate perhaps than I, will kill this power as he would kill a mad cur." The offense of the Boston News Bureau and its publisher consisted of telling the truth about Trinity. Fortunately no crack-brained fool followed the hint, so murder was not done—no thanks to Lawson, the "reformer."

The Trinity is Lawson's scientific little game for parting fools from their money, and it has been worked, very cleverly, with the assistance of

the Boston Stock Exchange, which is an accessory after the fact. The stock should be taken off the Boston exchange, and turned over to the Boston curb, which Lawson "reorganized" in 1908. Lawson saw fit to attack the Copper Handbook and its publisher in one of his advertisements, January, 1907, but was promptly called a liar and a bluffer, in a counter-advertisement, and notified to bring suit, if he dared, but, in preference, shut up, which is an evidence that Lawson, whatever he may be, is not a fool.

**TRIUMPH GOLD-COPPER CONSOLIDATED SMELTING, ARIZONA.  
LAND & IRRIGATION CO.**

Dead. Was a fraud, promoted by the notorious Wm. F. Wernse gang of swindlers. Formerly at Pima, Graham Co., Ariz.

**TRIUMPH TUNNEL SITE CO. ARIZONA.**

Office: El Paso, Tex. Mine office: Safford, Graham Co., Ariz. Thos McEniry, president. Organized 1899, with capitalization \$50,000. Lands are claimed to be 4,800 acres. Prospectus of this company is one of the worst ever issued, being full of deliberate lies, and the company cannot be regarded otherwise than as an intentional swindle.

**TROUGH-GULLY COPPER SYNDICATE CO., LTD. AUSTRALIA.**

Office: 46 Dame St., Dublin, Ireland. Mine office: Tamworth, N. S. W., Australia. Sir. E. Cochrane, Rev. J. Robinson, J. Mulligan and W. F. Cotton, directors. Organized Jan. 8, 1908, under laws of Ireland, with capitalization £17,000, shares £1 par.

**TROUT CREEK COPPER MINING CO.**

Dead. Formerly had an office at 317 Fidelity Bldg., Taeoma, Wash.

**TROY CONSOLIDATED MINING CO. ARIZONA.**

Office: 25 Broadway, New York, N. Y. Mine office: Troy, Pinal Co., Ariz. Works office: Florence, Frémont Co., Colo. Hon. A. B. Lewis, president. Capitalization \$4,000,000, shares \$10 par. Is practically a reorganization of the Troy-Manhattan Copper Co., though latter retains its corporate existence, and holds 160,000 shares of Troy Consolidated. Present company is said to have furnished a working capital of \$750,000, which is doubted.

Lands, 50 claims, area circa 1,000 acres, 6 miles northeast of Kelvin and 7 miles from a railroad. Mine has about 6 miles of openings, including circa 7,000' of tunnels, the Alice tunnel being circa 1,700' long, with back of about 800'. Has 4 shafts, including a 500' two-compartment main working shaft. Ores in upper workings are slightly auriferous and argentiferous oxides, succeeded by sulphide ores claimed to range 8 to 16% in copper tenor, with small gold and silver values. Vein is 3' to 11' in width, and widest in the bottom working, where it is very soft, requiring spilling. The 400' Sisson shaft shows a 6' body of sulphide ore, said to average about 5.5% copper. The 375' two-compartment Buckeye shaft has a 5' ore body, with a 2' paystreak carrying 9% copper, and the Buckeye vein is claimed to show a 25' vein of malachite, giving smelter returns of 6 to 10% copper, which estimates probably are excessive. The '91 claim has a 2' to 8' vein of wulfenite, for which a 40-ton concentrator was built, rear the Davis shaft, but this ore body apparently did not prove of commercial value. About \$750,000 has been expended on the property, by various managements and under various organizations, but it does not seem proven that large and permanent ore bodies have been developed. Mining equipment includes 2 gasoline hoists, a Leyner air-compressor and an electric plant, petroleum being used for fuel.

The old smelter, of 60 tons daily capacity, at Riverside, on the Gila River, was blown in 1901, and closed permanently, August, 1904, never running regularly, and experiencing much trouble from shortage of both coke and water. A new smelter, blown in January, 1905, ran 10 days, closing ostensibly on account of a washout, preventing the receipt of fuel, but in all likelihood

the smelters did not run regularly because lacking an adequate ore supply. The Rocky Mountain smelter of the Colorado Smelting & Refining Co., at Florence, Colorado, bought late 1907, was rated at 500 tons daily capacity, but has been idle since circa 1902, and apparently never was a success. Smelter is said to have been bought for \$400,000, and apparently management planned shipping ore from Arizona to Colorado, for reduction, which seems an idea of doubtful value. Suspended operations October, 1907. Results from mine, under various managements and ownerships, have been distinctly disappointing.

**TROY COPPER CO.****ARIZONA.**

Dead. Merged, 1902, in Troy-Manhattan Copper Co. Formerly at Troy, Pinal Co., Ariz.

**TROY GOLD MINING CO.****COLORADO.**

Dead. Formerly at Granite, Chaffee Co., Colo. Described Vol. VI.

**TROY-MANHATTAN COPPER CO.****ARIZONA.**

Office: 25 Broadway, New York, N. Y. Is practically out of business, having transferred its property at Troy, Pinal county, Arizona, 1907, to the Troy Consolidated Mining Co., for a stock interest of 160,000 shares in the latter-named corporation. Fully described Vol. VI.

**TRUE BLUE COPPER MINES, LTD.****BRITISH COLUMBIA.**

Dead. Formerly at Ainsworth, Slocan district, B. C.

**TRUE BLUE MINE.****AUSTRALIA.**

Mine office: Stanthorpe, Queensland, Australia. Lenox & Rannie, owners. Mine has a vein of 8' to 15' width, carrying considerable ore assaying 17.12% copper and 33 oz. silver, which is shipped for smelting, low-grade ore being concentrated at an adjoining mill and shipped to London. Production, 1906, was 112,000 lbs. fine copper and 1,767 oz. silver.

**TRUE MINING & REDUCTION CO.****MONTANA.**

Office: Cleveland, Ohio. Mine office: Basin, Jefferson Co., Mont. Lands, known as the Buckeye Mine, have a 170' shaft, with about 600' of workings, showing ore giving fair assay values in lead, copper, silver and gold. Has steam power, a small saw-mill and a 50-ton concentrator.

**TSUBOI MINE.****JAPAN.**

Mine office: Tsuboi-mura, Kume-gori, Mimasaka, Japan. Ore is chalcopyrite, associated with iron pyrites, said to average 13% copper and 0.2% silver, occurring in three principal veins of 2' to 4' width, running parallel to plane of stratification of paleozoic clay-slate and schalkstein. Production was 218,808 lbs. fine copper in 1903, and 354,855 lbs. copper and 3,308,835 momme silver in 1907.

**TSUNATORI MINE.****JAPAN.**

Mine office: Yokokawame-mura, Waka-gori, Rikuchu, Japan. Production was 309,063 lbs. fine copper in 1903, and 216,844 lbs. in 1906.

**TUBAL-CAIN COPPER & MANGANESE MINING CO.****WASHINGTON.**

Office: 211 Coleman Blk., Seattle, Wash. Mine office: Port Townsend, Jefferson Co., Wash. Frank Hanford, president and treasurer; Victor E. Tull, general manager; I. A. Nadeau, secretary; S. Marpel, superintendent. Lands, 29 claims, 1 fractional, 18 miles from a railroad, in the Olympic Mountains, having a 1,800' tunnel, planned to cut 5 veins of auriferous copper ore, said to carry fair values in both copper and gold.

**AKTIEN-GESELLSCHAFT TUBALKAIN.****GERMANY.**

Mine office: Adenau, Rheinprovinz, Germany. Has ores of copper, lead and iron. Idle several years.

**TUBUTAMA MINING & REDUCTION CO.****MEXICO.**

Mine office: Tubutama, Altar, Sonora, Mex. Lands, 300 pertenencias, including antiguas, adjoining the Sonora Mining & Milling Co. Idle several years.

**SOCIÉTÉ DES MINES DE TUCCO-CHEIRA.**

PERÚ.

Office: 50, Blvd. Hausmann, Paris, France. Mine office: Casilla 10, Huaraz, Ancachs, Perú. Capitalization, 2,500,000 francs.

**TUCSON CONSOLIDATED COPPER CO.**

ARIZONA.

Office: 51 Chamber of Commerce, Milwaukee, Wis. Mine office: Tucson, Pima, Co., Ariz. J. H. Wussow, president; F. B. Morris, vice-president; F. J. Rodee, secretary and treasurer; Hon. F. W. Fickett, general manager; preceding officers, Dr. M. A. Barndt and C. F. Freeman, directors; E. W. Drew, superintendent. Organized Apr. 15, 1907, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par; issued, \$1,600,000.

Lands, 103 claims, area 2,060 acres, in 6 groups, known as the Old Pueblo, Masonic, Bolello, Gold Hill, Purcell and Black Dyke. The Old Pueblo is held from the Old Pueblo Mining & Milling Co., under an option by which the Tucson Consolidated is to have 51% of stock of the Old Pueblo, on completion of \$150,000 worth of work. The Old Pueblo is separately described, though included in present company's landed holdings. Property as a whole, including the Old Pueblo, shows 3 ore bodies under development, of 3' to 60' average width, giving ores assaying 6 to 30% copper, 12 to 80% lead, 3 to 125 oz. silver and 80 cents to \$30 gold per ton, from azurite, malachite, chalcocite, chalcopyrite and galena, property as a whole having tunnels of 40', 118' and 287', and 12 shafts of 45' to 210' depth, with a total of about 3,900' of workings, estimated by company to show 2,000,000 tons of ore, with 500,000 tons blocked out for stoping, which estimate seems excessive. Principal development is on the Old Pueblo group, separately described. The Masonic group is near the Old Pueblo, circa 6 miles west of Tucson. The Purcell group, 17 claims, has a 100' tunnel and several shafts of 25' to 60' depth, showing ore said to give average assays of about 25% copper, with about 1,000' of workings, said to put in sight 500,000 tons of ore, which is an excessive estimate, that will assay 5% copper, 5 to 40 oz. silver and 8 cents to \$5 gold per ton, with some silver-lead ores. The Black Dyke group, 48 claims, area 960 acres, has several shafts of circa 50' depth, showing copper ore of 4 to 25% tenor, and lead ore assaying up to 69% lead and 139 oz. silver per ton. The Bolello group, 9 claims, shows 3 copper veins and has a 60' shaft, carrying ore assaying up to 24% copper, with gold and silver values.

Equipment includes a 250-h. p. steam plant, with 2 hoists. Has 6 buildings, including 2 stores. Fuel is petroleum. Made an initial shipment, October, 1907, of ore carrying 10 to 12% copper and \$5 to \$10 combined gold and silver values per ton. Employs circa 20 men. Property considered promising, and management apparently business-like and vigorous, though inclined to make excessive claims.

**TUCSON-GLOBE COPPER CO.**

ARIZONA.

Dead. Former office was at Tucson, Ariz. Property was the Robertson and Westbrook claims, near the Gibson mine, west of Globe. Formerly at Globe, Gila Co., Ariz.

**TULAROSA COPPER CO.**

NEW MEXICO.

Office: Tularosa, N. M. Mine office: Bent, Otero Co., N. M. F. P. Kearns, president; H. A. Forrester, vice-president; G. P. Bent, secretary and general manager; W. F. Drake, treasurer; Sam Lusky, mine superintendent; R. G. Riley, mill superintendent. Organized March 5, 1905, under laws of New Mexico, with capitalization \$5,000,000, shares \$5 par, as successor of Tularosa Mining & Milling Co.

Lands, 15 claims, area 300 acres, and a 10-acre millsite, with 300 acres miscellaneous lands, in the Tularosa district, 15 miles from a railroad, showing a vein of apparently unknown width, dipping at 25°, carrying chalcocite, bornite and chalcopyrite with sandstone gangue, with a shallow oxidized zone

carrying carbonates and a little native copper. Mine has shafts of 60', 50' and 45', with about 800' of workings, estimated to show 500,000 tons of ore. Has steam and water power, with 10 mine buildings.

Mill, 65x70', has an 8x14" Blake crusher, 1 Harz jig and 2 Wilfley tables. Ore is hand-sorted, selected smelter ore ranging up to 50% in copper tenor, balance of low-grade being milled, mill putting about 15 into 1 and producing a daily average of about 1 ton of concentrates carrying 42.4% copper and 30 to 45 oz. silver per ton. Average tenor of ore is reported by company to be 6%, but will perhaps show an average for concentrating ores of about 4% copper, 2 to 3 oz. silver and 0.02 to 0.03 oz. gold per ton. Company plans building a much larger mill, and opening mines more extensively, but is going carefully, in preference to going into debt, which is a wise course. Mine considered promising, and management regarded favorably.

**TULAROSA MINING & MILLING CO.**

NEW MEXICO.

Dead. Succeeded March 5, 1905, by Tularosa Copper Co. Formerly at Bent, Otero Co., N. M.

**MINA TULIPAN.**

CHILE.

Mine office: Chafaral, Atacama, Chile. Zoilo Rojas, owner; R. Olquin, superintendent. Has steam power.

**TULLOCK GOLD & COPPER CO.**

NEW MEXICO.

Office and mine: Silver City, Grant Co., N. M. Organized 1907. Lands, 15 claims, area, 300 acres, on Edith Mountain, in the White Signal district, having a 50' shaft on the Dagger Point claim, showing ore said to average about 14% copper.

**TULLY COPPER MINING CO.**

COLORADO.

Office: Encampment, Wyo. Mine office: Pearl, Larimer Co., Colo. F. J. Lordier, president; H. B. Lordier, president; H. B. Ashley, secretary; B. A. Maan, treasurer; J. D. Tally, superintendent. Organized 1901, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Lands, 12 acres, unpatented, also a 6-acre millsite, showing 6 fissure veins, carrying oxidized ores, of which one, opened by a 175' shaft, is said to show a 25' vein, carrying average values of 6% copper and \$4 gold per ton. Property, which is unpatented, is mortgaged for \$1,500, raised to perform assessment work. Company apparently in a bad way.

**TUM-TUM GOLD & COPPER MINING CO.**

WASHINGTON.

Office: 1017 Scarritt Bldg., Kansas City, Mo. Jas. H. Clark, fiscal agent. Company claims to own 10 claims, area 200 acres, in the southwestern part of Washington, 60 miles in an air-line from Portland, Ore. Presumably idle.

**TUMWATER COPPER MINING CO.**

WASHINGTON.

Office: Minneapolis, Minn. Mine office: Leavenworth, Chelan Co., Wash. Henry Jejeski, president; J. Cermak, vice-president; Francis Hrahovsky, treasurer; Andrew Jejeski, secretary; John Sadoske, superintendent. Organized 1907, under laws of Washington, with capitalization \$500,000, shares \$1 par.

**COMPANIA MINERA DE TUNILLAS.**

CHILE.

Office: Santiago de Chile. Mine office: Tunillas, Coquimbo, Chile. Organized Apr. 18, 1906, under laws of Chile, with capitalization 600,000 pesos, shares 50 pesos par.

**TUOLUMNE COPPER MINING CO.**

MONTANA.

Office and mine: Butte, Silver Bow Co., Mont. Edw. Hickey, president; N. J. Bielenberg, vice-president; J. J. Harrington, secretary; John W. Pratt, treasurer; Patrick Sheehan, general manager. Organized May 24, 1906, under laws of Arizona, with capitalization \$800,000, shares \$1 par. Shares are listed on the Butte Stock Exchange.

Lands, one fractional claim, area 6 acres, being small but well located, lying between the Speculator and Jessie claims, two of the best mines of the

**North Butte.** Title is by deed, and property is not in litigation. Has a 1,050' three-compartment shaft, planned to be deepened to 1,600', with 1,500' of drifts and crosscuts, latter showing 3 veins, on the 1,000' level, one, of about 25' width, carrying very low grade copper ore, the north vein showing circa 4' of ore of 3 to 7% copper tenor. Company is preparing to install a new surface plant, with hoist good for 3,000' depth, present hoist having reached the limit of its capacity. The Tuolumne is one of the few companies organized at Butte, during the 1906-1907 boom, to continue development steadily throughout the depression, employing about 35 men. No commercial ore of importance had been developed by the end of 1908, but work at the North Butte mine, adjoining, indicates that ores of good grade should be found at depth of 1,500' or less. Property considered promising.

**TURNBULL DEVELOPMENT CO.****ARIZONA.**

Office and mine: Globe, Gila Co., Ariz. Organized March 18, 1907, under laws of Arizona, with capitalization \$500,000, shares \$1 par, by Wm. Woolsey, H. N. Pascoe, G. W. Jones and Geo. R. Hill. Property is said to show a 10' vein of slightly auriferous and argentiferous 10% copper ore, in an old shaft. Mine also has a 400' tunnel.

**TURGOVSKI WORKS.****RUSSIA.**

Mine and works office: Perm, Russia. D. T. Zaharovski, manager. Production, 1900, as per official Russian figures, was 111,686 lbs. fine copper, and unofficial returns of output for 1902 were 1,167,500 lbs. Presumably idle.

**TURK MINING & MILLING CO.****WASHINGTON.**

Office: Davenport, Wash. Mine office: Turk, Stevens Co., Wash. A. H. Stiles, superintendent. Ores carry gold, copper and silver.

**TURNER-ELY COPPER CO.****NEVADA.**

Office: 35 Wall St., New York, N. Y. Mine office: Ely, White Pine Co., Nev. S. Herbert Williams, manager. Capitalization \$10,000,000, shares \$10 par. Lands, 9 claims, area 116 acres, said to lie between the Nevada Consolidated and Cumberland-Ely.

**TURNSTREAM COPPER MINING & DEVELOPING CO. CAPE COLONY.**

Office: East London, Cape Colony. Mine office: Cathcart, Cape Colony. Organized circa June, 1907, under laws of Cape Colony, with capitalization £30,000, working capital £10,000, as successor of Turnstream Copper Syndicate. Lands, 16 miles from Cathcart, on the Zwart Kei river, show 4 veins, on one of which a 40' shaft has ore giving a general average assay of 12.55% copper.

**TURNSTREAM COPPER SYNDICATE.****CAPE COLONY.**

Dead. Succeeded, 1907, by Turnstream Copper Mining & Developing Co. Formerly at Cathcart, Cape Colony.

**TURQUOISE COPPER CO.****NEW MEXICO.**

Mine office: Brice, Otero Co., N. M. Property includes an old turquoise mine, showing turquoise and copper ore, latter mainly melaconite and chalocite. Shipments of hand-sorted and screened ore have returned 11 to 18% copper. Plans a concentrator.

**TURQUOISE COPPER MINING CO.****ARIZONA.**

Mine office: Gleeson, Cochise Co., Ariz. Idle.

**TUSAS PEAK GOLD & COPPER MINING CO.****NEW MEXICO.**

Office: 364 River St., Manistee, Mich. Mine office: Tusas, Rio Arriba Co., N. M. W. J. Sibben, president; Constantine Fleissner, vice-president; Otto Rosenfeld, treasurer and resident director; Jos. Baur, secretary; preceding officers, Max Bowman, Jas. W. Murray, A. Bohensted, Chas. Engler and L. B. Skyoch, directors; Frank Bolton, superintendent. Organized Apr. 28, 1902, under laws of New Mexico, with capitalization \$2,000,000, shares \$1 par. Bonds, \$100,000 authorized, circa \$40,000 issued.

Lands, 13 claims, area 230 acres, and a 5-acre millsite, in the Conglomerate

district, circa 14 miles west of Tres Piedras, and 10 miles from a railroad. Principal development is on the Tampa mine, having a 13' vein of auriferous and argentiferous copper ore, with a 5' paystreak said to average 7.5% copper, balance of ore being of concentrating grade. The Tampa has shafts of 80', 85' and 425', with about one-half mile of workings, showing ore reported by company to assay 5 to 44% copper, 1 to 4.5 oz. silver and \$1.20 to \$3.80 gold per ton, with some ores assaying up to 2.3 oz. platinum per ton, and with more or less molybdenum. Has a hydraulic ram on Tusas Creek; 3-drill air-compressor and a small sawmill. Has a 40-ton leaching plant, with Wild mills, completed 1907, planned to treat oxidized ores. Presumably idle.

**TWENTIETH CENTURY ALASKA COPPER CO.** **ALASKA & WASHINGTON.**

Mine office: Valdez, Alaska. Letter returned unclaimed from former mine office, Index, Snohomish Co., Wash. W. N. Robeson, business manager; Judson C. Hubbard, superintendent. Lands include claims in Alaska, and the Kitanning mine, 9 claims, 2 miles north of the Sunset, supposed to carry the extension of the Ethel vein, at Index, having a 400' tunnel and a 650' aerial tram. The Index property is idle; as presumably is the Valdez property also.

**TWENTIETH CENTURY GOLD MINING CO., LTD. ARIZONA & ONTARIO.**

Dead. A swindle that paid dividends while selling stock. Formerly in the Rainy River district of Ontario and in Cochise county, Arizona. Described Vol. VI.

**TWENTIETH CENTURY KNIGHTS ISLAND COPPER CO. ALASKA.**

Mine office: Valdez, Alaska. Lands, 8 claims, on Dryer Bay, adjoining the Knights Island Copper Co.

**TWIN BUTTES MINING & SmELTING CO. ARIZONA.**

Office: 121 Wisconsin St., Milwaukee, Wis. Operating office: Tucson, Ariz. Mine office: Twin Buttes, Pima Co., Ariz. Edw. T. Davis, president; Samuel D. Adler, first vice-president; W. A. Barber, second vice-president; H. J. Blakeley, secretary; Edw. P. Hackett, treasurer; preceding officers, W. H. Earles, Felix Isman and J. G. Baxter, directors; Capt. Wm. McDermott, mine superintendent; David L. Stinson, railroad superintendent.

Organized Sept. 8, 1903, under laws of Arizona, with capitalization \$1,000,000, increased, 1905, to \$1,250,000; shares \$1 par. Bonds outstanding, \$100,000. Controls, through stock ownership, the Twin Buttes Railroad Co. Wisconsin Trust Co., transfer agent and registrar. Annual meeting, first Monday in January.

Lands, 31 claims, partly patented, area 1,250 acres, in the Helvetica district, in the foothills of the Sierrita Mountains. Property, opened 1889, was unsuccessful under former ownership, owing to lack of cash and management, though always considered promising. Lands are reported to carry fissure veins in limestone, and contact deposits between limestone and granite, with limestone foot and granite-porphyrh hanging. The various properties of the company had about a mile of workings, 1906, estimated to show 50,000 tons of ore blocked out for stoping, averaging circa 7% copper and 1.85 oz. silver, with traces of gold.

The Senator Morgan mine has a 7x16' three-compartment shaft, of circa 500' depth, said to show a vein of 25' average width, carrying sulphide ore of circa 10% copper tenor in the bottom workings, but ore probably is not so rich as estimated. The Morgan shaft has railroad connections.

The Copper Glance mine has a 416' shaft, sunk on an ore body having a 30' gossan; succeeded by about 200' of carbonate ore, and, on the 300' level, a crosscut has passed through 35' of marcasite carrying kidneys of chalcocite, and a crosscut on the 400' level encountered a promising ledge of soft leached ore.

The Copper King mine has a 200' shaft, developing carbonate ores in the upper workings, and sulphides in the bottom, the showing being considered promising.

Equipment includes a 300-h. p. steam plant, burning wood and petroleum, at the Morgan mine, with a 125-h. p. Leyner double-drum hoist, raising 3-ton loads, and a 10-drill Leyner compound air-compressor. There is a gasoline plant at the Copper King mine.

Buildings, 14 in number, include a power-house, machine-shop, smithy and store.

The Twin Buttes railroad, 27 miles in length, running from Twin Buttes to Tucson, completed July, 1906, has one locomotive and 3 flat-cars.

The matter of building a smelter was given tentative consideration in 1907. Water for a smelting plant can be secured from the Santa Cruz river, 5 miles distant.

Production was 700,389 lbs. fine copper and 11,284 oz. silver, in 1906, and was 94,056 lbs. copper and 342 oz. silver, in 1907. In August, 1907, the mine was shipping circa 50 tons daily, but suspended operations a few weeks later, resuming shipments, 1908, on the basis of 8 carloads weekly, to El Paso smelter. Property considered promising, but apparently is suffering from lack of adequate capital.

#### TWIN CITY DEVELOPMENT CO.

#### COLORADO.

Dead. Formerly at Turret, Chaffee Co., Colo. Described Vol. VI.

#### TWIN-EDWARD COPPER MINE CO.

#### SCOTTISH CAROLINA.

Office and mine: Greensboro, Guilford Co., N. C. Organized September, 1902, with capitalization \$100,000, shares \$100 par. Lands are sundry old properties, including the Twin mine, with an 18' vein, which was worked previous to the American Civil War. Idle several years.

#### TWIN KINGS MINING CO.

#### NEVADA.

Office: 896 Wells Bldg., Milwaukee, Wis. Mine office: Caprite, Esmeralda Co., Nev. A. F. Heidkamp, president; Elbert Oldt, general manager. Capitalization \$1,250,000, shares \$1 par. Lands, 4 claims, 3 miles from Caprite and 12 miles south of Goldfield, having a vein of 5' to 10' width, carrying mainly oxidized surface ores, with a little chalcocite, opened by several pits, cuts, and 2 shafts of circa 70' each, said to give ore assaying 25 to 45% copper, 20 to 40 oz. silver and \$90 to \$40 gold per ton. Advertising of Koenig, Evans & Co., of Milwaukee, fiscal agents, was entirely too promissory. Presumably idle.

#### TWISP GOLD-COPPER MINING CO.

#### WASHINGTON.

Office: care of Frank R. Crighton, manager, Spokane, Wash. Letter returned unclaimed from former mine office, Twisp, Okanogan Co., Wash. Lands, known as the Index group, circa 20 miles north of Twisp, are slightly developed by tunnel, showing a little low grade copper ore. Idle.

#### TWO LAKES COPPER MINING CO., LTD.

#### ONTARIO.

Office and mine: Sowerby, Algoma, Ont. Organized Oct. 12, 1906, under laws of Ontario, with capitalization \$500,000.

#### TWO QUEENS MINE.

#### ARIZONA.

Owned by Central Mining & Development Co.

#### TWO REPUBLICS MINING CO.

#### ARIZONA.

Office and mine: Jerome, Yavapai Co., Ariz. E. A. Smith, president; John B. Lecorr, vice-president; Paul Smyly, secretary and treasurer; A. T. Dixon, manager. Organized 1908, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, circa 10 miles from Jerome, have a tunnel, planned to be driven 700'.

#### TYHE COPPER CO., LTD.

#### BRITISH COLUMBIA.

Office: 45 Leadenhall St., London, E. C., Eng. Operating office: Board

of Trade Bldg., Victoria, B. C. Mine office: Duncans, Vancouver Island, B. C. Works office: Ladysmith, Vancouver Island, B. C. Thos. Headland Wilson, chairman; preceding officer, Nicol Brown, Harry von Berg, Albert Straube and C. Ludwig Loeffler, directors; Wm. Gardner, secretary; W. H. Trewartha-James, general manager; J. W. Bryant, superintendent; W. J. Watson, smelter superintendent; W. M. Brewer, ore purchaser.

Organized Apr. 4, 1900, under laws of Great Britain, with capitalization £180,000, shares £1 par. Dividends were 10% in 1904; 10% in 1905; 5% in 1906, and 7½% in 1907. At end of fiscal year, Apr. 30, 1908, the company had £80,595 19s. invested in selected bonds and stocks of exceptional solidity, and profits, for year ending Apr. 30, 1907, were £22,506.

Lands, 13 claims, crown-granted, area 342 acres, also a 45-acre smelter site, 60-acre tramway terminal and 800 acres timber lands, all in the Somenos district, on Mount Sicker, circa 11 miles northwest of Duncans, and about 80 miles from Vancouver.

The Tyee mine shows schists carrying up to 2% copper, with small gold and silver values, suitable for fluxing, and lenses, in banded schists, of chalcopyrite, with barite gangue, averaging 4% copper, 2.5 oz. silver and \$3 gold per ton, with about 7% zinc and circa 38% barium sulphate, rendering the ore refractory in smelting. The main shaft, of circa 1,000' depth, encountered no ore of importance below the 300' level, though the mine was tested, systematically, to a depth of circa 1,200', by drifts, crosscuts and borings by 2 diamond drills. The north lode of the Tyee, on the I. X. La claim, adjoining the Tyee, has a 500' shaft. No. 2 shaft is circa 200' in depth.

Mining equipment includes a 10x40", link-motion hoist, with two 4' drums, operating safety cages, with smaller hoists of 20 h. p. and 50 h. p., also 5-drill and 10-drill air-compressors and a pumping plant capable of raising 100,000 gallons daily, in a single lift of 1,000'. There also is a sawmill at the mine.

Buildings at the mines include an engine-house, boiler-house, smithy, carpenter-shop, store, boarding-house and bunkhouse.

The concentrator, at the main shaft, has a No. 4 Gates crusher, Blake crusher, grizzly, rolls, grinders, Snyder automatic samplers and an ore-sorting belt, ore being delivered from the sorting belt to 100-ton bunkers.

Ore is taken from the bunkers by a 3½-mile aerial tram, having half-ton buckets, operated by a 4-h. p. engine, for starting, gravity furnishing the motive power, there being a drop of 2,000' between the mine and the 400-ton ore-bunkers at the lower terminus of the line, on the Esquimalt & Nanaimo railway. From the lower bunkers, ore is carried 17 miles, by rail, to the smelter, in 30-ton bottom-dumping cars.

The smelter is well located, on a 45-acre site on Oyster Harbor, where there is a 40x210' wharf, connected by an elevated incline trestle with the smelter-bins. Considerable improvements were made, 1907-1908, on these works, at a cost of circa £20,000. A notable feature of this plant is the roast-yard, which is fully described in the chapter on Pyrometallurgy of Copper, in this volume.

The smelting plant, terraced throughout, to permit handling of material by gravity, has a 56x81' wooden furnace building, with a 200-ton Allis-Chalmers water-jacket blast-furnace, 42x120" at the tuyeres, using a hot blast, with room for a second furnace of the same size. The furnace has a water-jacket fore-hearth for matte, slag skimming into a settler and thence into a launder, where granulated and washed away by running water. The dust-flue, 8x11x165', arched over with corrugated iron, leads to a 90° smokestack, of 7' diameter. The furnace reduces 9.45 tons of ore and flux with one ton of coke. The reduction plant also includes a complete sampling mill, briquetting plant for lime, electrolytic assay plant and an electric light plant. The plant does a general

custom business, handling ores from British Columbian and Alaskan mines, and sells its product, as a 50% matte, to American smelters having bessemerizing works.

Production of the mine, 1906, was 23,823 tons of ore, yielding 2,115,617 lbs. fine copper, 77,085 oz. silver and 2,776 oz. gold. The mine was closed down, 1907, yielding in that year only 1,200 tons of ore. Smelter production, 1905, was 3,039,398 lbs. fine copper, 103,474 oz. silver and 5,952 oz. gold. The smelter treated circa 55,000 tons of ore in 1907, and for fiscal year ending Apr. 30, 1908, was in blast 187 days, treating 42,807 tons of ore, with 4,902 long tons of coke, one ton of coke smelting 8½ tons of ore. Smelter production, for fiscal year 1908, was 3,975½ long tons matte, averaging 39.9% copper, 18.72 oz. silver and 18 dwts. gold per ton, equivalent to 3,568,486 lbs. fine copper.

The management of the Tyee is entitled to great credit for the masterly manner in which it has survived the exhaustion of its mine, and has changed position from a mining company to a custom smelting corporation, while continuing substantial dividend payments.

#### TYRONE DEVELOPMENT CO.

NEW MEXICO.

Dead. Succeeded, circa May, 1907, by Chemung Copper Co. Formerly at Tyrone, Grant Co., N. M. Described Vol. VI.

#### TYRONE MINING CO.

NEW MEXICO.

Office and mine: Tyrone, Grant Co., N. M. Lands, in the Burro Mountains, were being explored by churn drill, at last accounts.

#### TYWARNHAILE SYNDICATE, LTD.

ENGLAND.

Office: 1 St. Helens Place, London, E. C., Eng. Mine office: Mt. Hawke, Scorrier, Cornwall, Eng. W. R. Thomas, mine manager; Chas. N. L. Shaw, secretary. Organized Sept. 19, 1907, under laws of Great Britain, as reconstruction of a company of similar name formed July 11, 1905, with capitalization £30,000, shares £1 par; issued, £28,683. Property is the Tywarnhaile mine, which carries copper ore only, without the tin found in other Cornish copper mines. Has a mill, using the Elmore vacuum process.

#### TEAREVO-ALEXANDROVSKI WORKS.

SIBERIA.

Office, mine and works: Semipalatinsk, Siberia. Mines, said to be rather promising, though but slightly developed, yielded an average annual production of about 500,000 lbs. fine copper, at last accounts.

#### UBEHEBE COPPER CO.

CALIFORNIA.

Office: 544 Equitable Bldg., Baltimore, Mr. Capitalization \$1,000,000, shares \$1 par. Lands, sundry claims, about 50 miles south of Goldfield, Nev., in the Ubehebe Mountains, near Death Valley, Inyo county, California, said to show veins of 8' to 50' width, carrying auriferous and argentiferous ores, up to 20% in copper tenor.

#### UBEHEBE COPPER MINES & SMELTER CO.

CALIFORNIA.

Office: 701 Calvert Bldg., Baltimore, Md. Mine office: Lone Pine, Inyo Co., Cal. John Salisberry, president and general manager; Henry G. Merry, vice-president; J. J. Griffith, secretary and treasurer; Ray T. Baker, general manager. Lands, 50 claims, area 1,000 acres, in the Ubehebe district, circa 50 miles northwest of Rhyolite, Nevada, and about 50 miles from Bonnie Clair station, on the Bullfrog-Goldfield road. Property, said to give good surface showing of copper, has an 80' shaft and a 145' tunnel.

#### UGURCHAISKA MINE.

RUSSIA.

Office: Batum, Russia. Kunderov Bros., owners; G. Chaimazadi, manager. Mine, in the government of Elizabethopol, was but a small producer, at last accounts.

#### UINTAH COPPER SUMMIT CO.

UTAH.

Dead. Formerly at Vernal, Uintah Co., Utah.

**UINTAH MINING, MILLING & DEVELOPMENT CO.****UTAH.**

Letter returned from former mine office, Bingham Canyon, Salt Lake Co., Utah. L. C. Moore, general manager; F. D. McNeill, superintendent. Is said to have bought the Castro group, opened by a 700' tunnel, at Bingham Canyon, 1905. Apparently is some relation to the Castro-Grecian. Idle.

**UINTAH TREASURE HILL COALITION MINES CO.****UTAH.**

Office: Provo, Utah. Mine office: Park City, Summit Co., Utah. Jesse Knight, president; T. W. Bell, vice-president; W. Lester Mangum, secretary and treasurer; preceding officers, J. William Knight and E. S. Fisher, directors; R. L. Andrews, superintendent. Organized 1907, under laws of Utah, with capitalization \$500,000, shares 50 cents par. Lands, circa 20 claims, including the Creole mine, formerly held by the Uintah Treasure Mining Co.

**UINTAH TREASURE HILL MINING CO.****UTAH.**

Dead. Was organized circa July, 1907, as successor of Treasure Hill Mining Co., and was succeeded, circa August, 1907, by Uintah Treasure Hill Coalition Mining Co. Formerly at Park City, Summit Co., Utah.

**ULCAHOMO MINING & MILLING CO.****WYOMING.**

Office: Cheyenne, Wyo. Mine office: Leslie, Albany Co., Wyo. Lands, 11 claims, area 220 acres, 1½ miles from the Strong Copper Mining Co., in Natrona county, Wyoming, having 2 shafts, deepest 150', on a vein carrying cupriferous pyrite with quartz gangue having small silver and nickel values, and occasional free gold assaying up to \$1,000 per ton. Has steam power.

**ULIDA CONSOLIDATED COPPER CO.****CALIFORNIA.**

Office: 37 Wall St., New York, N. Y. Mine office: Lone Pine, Inyo Co., Cal. Jas. H. Dalton, president; Henry D. Harris, secretary. Organized November, 1908, under laws of Maine.

**ULIDA COPPER CO.****CALIFORNIA.**

Office: care of Hon. Wm. H. King, Salt Lake City, Utah. Mine office: Lone Pine, Inyo Co., Cal. Chas. McRoberts, superintendent. Organized circa January, 1907, under laws of Maine, with capitalization, \$5,000,000. Lands, 23 claims, in the Ubehebe district, some distance from transportation, showing a 7' contact vein between limestone and granite, carrying argentiferous melanite and occasional cuprite, giving assays of 14% copper and \$3 to \$10 gold per ton. Development is by tunnel, and under former ownership mine made several small shipments of hand-selected ore of high copper tenor.

**UNAWEEP COPPER MINING & MILLING CO.****COLORADO.**

Mine office: Grand Junction, Mesa Co., Colo. Jas. V. Howard, secretary. Organized under laws of Colorado, with capitalization \$500,000, shares \$1 par. Lands, 6 claims and a millsite, in the Unaweep district, slightly developed. Idle several years and presumably moribund.

**UNCLE SAM CONSOLIDATED MINING CO.****UTAH.**

Office: 516 Dooly Blk., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. John Dern, general manager; preceding officer, Jas. Chipman, Geo. Havercamp, B. S. Saunders and Jas. Nelson, directors; C. C. Griggs, superintendent. Organized June 29, 1901, under laws of Utah, with capitalization \$500,000, shares \$1 par. Owns 400,000 shares, being one-half of the capitalization, of May Day Mining & Milling Co. Report at annual meeting, June 1, 1908, for preceding fiscal year, showed gross earnings of \$135,455. Was paying monthly dividends of 2 cents per share, to August 1907.

Lands include the Humbug mine and a four-fifths interest in the Richmond and Anaconda claims, adjoining the Humbug. Mine produces mainly auriferous silver-lead ore, of both smelting and milling grades, but has some cuprite and copper carbonates ranging 12 to 33% in copper tenor. Has steam power and a concentrator. Production, 1907, was 185 carloads of ore.

**UNCLE SAM COPPER CO.****ALASKA.**

Office: 1237-38 Broad St., New York, N. Y. Mine office: Ketchikan, Alaska. Is said to be controlled by Alaska Mines Securities Co., through stock ownership, secured May, 1906. Lands, 3 miles from the Hadley, show a 40' vein, traceable 1,200', carrying auriferous and argentiferous copper ore, of fair average tenor. Property has necessary mining buildings, and a 1,150' tramway leading from the mine to a wharf on tidewater.

**UNCLE SAM COPPER CO.****ARIZONA.**

Dead. Formerly at Gilbert, Yavapai Co., Ariz. Fully described Vol. VI.  
**UNDERLAY MINE.**

**AUSTRALIA.**

Mine office: Dandaloo, New South Wales, Australia. Lands, circa 20 miles west of Dandaloo, adjoin the Mount Royal mine, showing a 5' vein carrying high-grade oxide, carbonate and sulphide ores, ranging up to 40% in copper tenor. Presumably idle.

**UNIDA GOLD & COPPER MINING CO.****ARIZONA.**

Mine office: Wickenburg, Maricopa Co., Ariz. Geo. Margaretic, president and general manager; Geo. Palda, secretary. Lands, in the Black Rock district, have a 300' shaft and tunnels of 200' and 300', showing ore carrying good gold and copper values. Has steam power and shipped, 1907, several carloads of good ore.

**COMPAÑIA MINERA LA UNIÓN.****MEXICO.**

Mine office: Viesca, Coahuila, Mex. Property is El Esfuerzo mine, carrying copper ores.

**UNION CONSOLIDATED COPPER MINES, N. L.****SOUTH AUSTRALIA.**

Offices: Collins St., Melbourne, Australia, and 8 Broad Street Ave., London, E. C., Eng. Mine office: Umberatana, Lyndhurst, South Australia. E. Lowenstein, chairman; A. J. Miller, managing director; Arthur Hebdon, London secretary; W. B. Greenwood, engineer; A. G. Barjeant, mine manager. Organized Dec. 23, 1904, under laws of Victoria, with capitalization £150,000, shares £1 par. Owns a share interest in the Lyndhurst (South Australia) Copper Co., Ltd.

Lands, 440 acres, in the Yudnamutana district, circa 70 miles east of Lyndhurst, the nearest railroad point, and 400 miles north of Adelaide, including a number of old mines that have been failures in the past, on which a little mining was done and an old smelter built many years ago. Lands carrying what is known as No. 6 lode were set off as the Lyndhurst (South Australia) Copper Co., Ltd. Lands include the Daly mine, showing 5 veins, apparently opened to a depth of about 100' only. No. 5 vein, which apparently is the only one of much importance, is claimed to average 400' in width, traceable 1½ miles, and to carry ore averaging 4 to 5% copper. Apparently the width does not exceed 200' and vein is traceable about one-half mile only, instead of 3 times that length. No. 5 lode is said to give oxide, carbonate and sulphide ores assaying 60% copper and 8 dwts. gold per long ton, these assays obviously being from carefully selected samples. No. 5 lode apparently is claimed by company to be a 4% proposition. Company claims the biggest surface showing in Australia, which claim seems utterly unwarranted, and claims to have upwards of 8,000,000 tons of ore in sight, in No. 5 vein, which is absolutely impossible, in view of the limited workings. Company's chairman stated his conviction that the lands were sufficient for at least 5 big copper mines, which was merely a wild guess. No. 5 lode was worked, circa 1890, and proved what the Australians call a duffer. Company made much of the fact that the Tasmanian Copper Co. was building a smelter in the district, and claimed to have a smelting contract therewith for the treatment of 1,000 tons of ore weekly, at 35s. per ton, price to be reduced to 32s. 6d. when production reached 3,000 tons weekly, but apparently the Tasmanian Copper Co. has practically aban-

domed its mines in the Yudnamutana district, and its Blinman smelter as well. Bulk parcels of ore, sent to smelter for tests, are said to have given average returns of 27.7%, but such tests are important, or otherwise, according to whether ores are selected to give an average, or to furnish high returns. Company apparently is averse to examination of its workings by other than its own men, and is regarded with suspicion.

**MINAS UNIÓN y CONSTANCIA.**

MEXICO.

Office and mines: Inde, Durango, Mex. Reinaldo E. Avila, general manager. Mines were opened in the Sixteenth Century. Country rock is andesite, showing 8 ore bodies, carrying chalcopyrite, galena and sphalerite, associated with pyrite. Ore body under development averages 2 meters width and is opened by a shaft of 18m. and by tunnels of 70m. and 100m., developing first-grade ore averaging 43% lead, 100 oz. silver and 54 oz. gold per metric ton, and second-grade ore averaging 4% copper and 20 oz. silver per ton, latter showing a little native copper. Smelter, 4 miles from the mine, has two 30-ton water-jacket blast-furnaces, shipping matte to the Aguascalientes works of the American Smelting & Refining Co., for conversion and refining.

**UNION COPPER CO.**

ARIZONA.

Office: care of S. G. Reading, president, Williamsport, Pa. Mine office: Globe, Gila Co., Ariz. W. F. Anthony, vice-president; F. L. Toombs, secretary and treasurer. Organized Oct. 31, 1906, under laws of Arizona, with capitalization \$1,000,000. Lands include the Chapparal, Sieboth and Halliday groups, the Chapparal group, 13 claims, being circa 2 miles northwest of the Gibson, and the Halliday group, 4 claims, lying between the Gibson and Central. Presumably idle.

**UNION COPPER LAND & MINING CO.**

MICHIGAN.

Office: 825-60 State St., Boston, Mass. Mine office: Houghton, Houghton Co., Mich. H. F. Fay, president; Geo. G. Endicott, secretary and treasurer; preceding officers, John C. Watson, Stephen R. Dow, Walter L. Frost and Capt. Jas. Chynoweth, directors; J. Abner Sherman, land agent.

Organized 1863, and reincorporated 1893, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; issued, \$2,000,000. Company begun 1908 with a balance of \$88,368.98, paying therefrom, Feb. 10, 1908, a \$40,000 dividend. Old Colony Trust Co., Boston, registrar. Annual meeting, fourth Thursday in March.

Lands, Jan. 1, 1908, were 5,323 acres, also 1,043 acres of mineral rights, in nearly 200 different parcels. Practically all of the company's holdings are on the Keweenawan copper belt, in Keweenaw, Houghton and Ontonagon counties, Michigan, much of the land being covered with valuable timber, including pine, hemlock and hardwood, mainly the latter.

**UNION COPPER MINES CO.**

NORTH CAROLINA.

Office: 42 Broadway, New York, N. Y. Mine office: Gold Hill, Rowan Co., N. C. Thos. C. Buck, Jr., chairman; Capt. H. L. Griswold, superintendent. Organized 1907, under laws of Maine, with capitalization \$2,500,000, shares \$5 par, as successor of Union Copper Mining Co., bankrupt, one share of new stock being given for two of old.

Lands, circa 1,150 acres, about 15 miles from Salisbury, in Rowan and Cabarrus counties, well watered and timbered, showing 5 veins, 3 carrying copper and one each silver and gold, the gold and silver veins being but slightly developed. Principal development is on the Big Cut copper vein, opened for distance of about one mile, by 10 shafts, of 150' to 900' depth. Upper levels of old workings were claimed to show a vein of 20' to 40' width, which apparently should be 15' to 30', carrying oxidized ores and a little native copper. The lower levels open a vein of 8' to 16' width, with slate walls, carrying chalcopyrite with quartz gangue, claimed by former company to aver-

age 10% copper, 3 to 30 oz. silver and \$1.50 to \$7.50 gold per ton, but a careful sampling, by Dr. A. R. LeDoux, gave averages of only 4.4% copper, 4 oz. silver and 40 cents to \$1.20 gold per ton. Ore occurs in a mineralized zone as lenses and chutes, longest about 100' in length. No. 7 shaft, 200' deep, shows a vein 4" wide at surface, and 8' to 4' wide on the 200' level, averaging circa 4.5% copper.

The machinery plant is extensive, but badly planned, formerly including 27 boilers, 18 hoists, 3 air-compressors and an electric light plant. Old compressor has been sold and replaced by a new Ingersoll-Band 10-drill air-compressor. Buildings include a 45x70' machine-shop, 40x60' smithy, a small iron and brass foundry, engine-house, boiler-houses, office building, 50-room hotel, 130 dwellings and a stable for 400 horses and mules.

The reduction plant includes a concentrator and smelter, latter having roasters and two 40-ton blast-furnaces, blown in September, 1901, and blown out June, 1902. Present company is said to plan a new mill. Affairs were badly muddled by management of former company, which conducted the property with a view mainly to the stock market. A little ore has been produced, and concentrates shipped, since 1902. Property considered promising, if worked in North Carolina instead of in the stock market. Idle.

#### UNION COPPER MINING CO.

#### CALIFORNIA.

Office: care of Estate of Fredk. L. Ames, Boston, Mass. Mine office: Copperopolis, Calaveras Co., Cal. David Ross, superintendent. Stock control is owned by the Ames Estate.

Lands include the Union, Keystone and Empire mines, also 2 claims adjoining the Alto, in Del Norte county, California. Mines, opened 1861, were considerable producers, paying fair dividends, circa 1861-1866. Formation is a black pyritous slate, in amphibolite schists, this belt running from Tuolumne county, on the south, through Calaveras into Amador county, on the north. The slate is 33' to 40' wide, with strike of 30° East of South and dip of 30° East. Ore occurs as lenses of 15' average width, connected by stringers, main lens being 2' to 40' wide and 600' long. The alteration zone, circa 30' in depth only, carries rich oxides and carbonates, and some native copper, below which occurs chalcopyrite, carrying neither gold nor silver, and unusually free from arsenic, antimony, bismuth and other undesirable elements, blister copper therefrom making good wire-bars, without electrolytic refining. Product is classified as smelting ore of 10 to 11% copper tenor, and as leaching ore carrying 5 to 5.5% copper.

Main shaft, 60', is bottomed in a 15' lense of medium-grade ore, and the mine has a mile of openings in ore. Equipment includes a hoist and pumps, with necessary mine buildings. Has a 100-ton Orford smelter, installed 1889. Operations confined, for many years, to producing cement copper, by leaching old dumps, which are extensive. Old workings were cleaned and retimbered, 90' steel gallows frame built over main shaft, and smelter overhauled, 1905-1906. Has survey made for a 12-mile railway, to connect with Southern Pacific, at Milton. Mine closed down, June, 1907.

#### UNION COPPER MINING CO.

#### NORTH CAROLINA.

Dead. Succeeded, 1907, by Union Copper Mines Co. Formerly at Gold Hill, Rowan Co., N. C. Fully described Vol. VI.

#### UNION COPPER MINING CO.

#### WYOMING.

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. VI.

#### UNION COPPER SMELTER CO.

#### ARIZONA.

Dead. Property was an imaginary smelter, devised to reduce ores from imaginary mines. Formerly at Pima, Graham Co., Ariz.

#### UNION COPPER SMELTING CO.

#### ARIZONA.

Dead. Same as Union Copper Smelting Co. A fraud, put out by the

notorious Wm. F. Wernse gang, of St. Louis. Formerly at Pima, Graham Co., Ariz.

#### UNION DEVELOPMENT CO.

#### CALIFORNIA.

Letter returned unclaimed from former office, Boston, Mass. Mine office: Johannesburg, Kern Co., Cal. Property was the Juanita claim, in the Morrow district, 26 miles east of Johannesburg, showing a contact vein, between granite and limestone, carrying auriferous chalcopyrite, with talcose gangue, opened by 4 shafts, deepest 212'. Idle some years and presumably moribund.

#### UNION MINE.

#### MICHIGAN.

Office: care of Calumet & Hecla Mining Co., Calumet, Mich. Mine office: Ontonagon, Ontonagon Co., Mich. Jas. MacNaughten, general manager; Theo H. Wileox, superintendent. Property, first known as the Isle Royale & Lake Superior, was the first mine opened in the Porcupine Mountains. Old company was organized October, 1864, under laws of Michigan, with capitalization \$500,000, and presumably has been wound up. Mine has 4 shafts, of 85' to 400' depth, with 4 levels opened, on an amygdaloidal bed lying north of the Nonesuch lode, and once had a small stamp-mill with Frue vanhera. Was unwatered February, 1908, by the Calumet & Hecla, which holds an option on the property.

#### UNION ORE EXTRACTION & REDUCTION CO.

#### COLORADO.

Dead. Reorganized, circa 1905, as National Radium & Copper Co. Formerly at Denver, Denver Co., Colo.

#### UNION SMELTING CO.

#### ARIZONA.

Letter returned unclaimed from former office, Los Angeles, Cal. Mine office: Chloride, Mohave Co., Ariz. Works office: Kingman, Mohave Co., Ariz. Lands include the Pinkham mine. Has a semi-pyritic smelter with a 60-ton matting furnace. Presumably idle.

#### UNITED ALKALI CO., LTD.

#### SPAIN.

Office: 30 James St., Liverpool, Eng. Mine office: Valverde del Camino, Huelva, Spain. Works office: St. Helens, Lancashire, Eng. Employs 3,000 men. John Brock, chairman; E. K. Muspratt, vice-chairman; Enstace Carey, secretary; J. H. Cresswell, general manager; C. Kaesmaeker, assistant manager; Alex. Hill & Stewart, consulting engineers. Organized under laws of Great Britain, with capitalization £8,750,000. Company is primarily a chemical and manufacturing corporation, with which copper mining is merely a small branch of the general business, and controls 46 subsidiary works and corporations, some of the plants being of very great size. The company has its principal works at St. Helens, Runcorn, Flint, Widnes and Glasgow, making extensive use of Spanish and Portuguese pyrites, which are burned for sulphur, after which the cinder remaining is leached for copper.

Copper properties in Spain include the Sotiel Coronada and Castillo del Buitron mines, which are separately described, also the Santa Rosa, Concepcion, Poderosa and Monte Rubio groups, all in the province of Huelva. Properties show typical Huelvan slates, with lenticular contact deposits between slate and porphyry, these, with a generally NW. and SE. strike, and dip of 30° to vertical, carrying cupriferous pyrites.

The Santa Rosa group, including El Tinto mine, having a combined area of 141 hectares, at Zalamea la Real, Huelva, is leased from the Sociedad de las Minas de Cobre Tinto y Santa Rosa. The Tinto and Santa Rosa mines, with 9 openings, have a 9-kilometer Bleichert aerial tram to Calafias. Production, 1905, from the Tinto and Santa Rosa, was 38,605 long tons of pyrites, and 808 long tons cement copper.

The Monte Rubio group, held under lease from Sociedad Colectiva C. & J. Sundheim, includes the Monte Rubio, Gibraltar and Atabalal Arbalcal mines, having a combined area of circa 100 hectares, at Paimogo, Huelva. These are

ancient properties, worked only to the level of the nearest stream, in the Roman era, the old workings, though comparatively superficial, disclosing enormous masses of ore, occurring as oxides, sulphides and sulphate, with gangue of iron ore, indicating the existence of large bodies of unaltered iron-copper sulphides at greater depth. There is a 22-kilometer railway from Monte Rubio to Ceifa Veral, on the river Guadiana, where the company also holds sundry undeveloped mineral leases.

The company controls the Ferrocarril Buitron, of 79 kilometers length, with 42" gauge, equipped with 18 locomotives, transporting ore, merchandise and passengers.

#### UNITED ARIZONA COPPER CO.

ARIZONA.

Letter returned unclaimed from former office, Kansas City, Mo. Mine office: Prescott, Yavapai Co., Ariz. Lands, known as the Mohoney group, in the Black Rock district, are said to show a vein of 5' to 50' width, opened by a 100' shaft, and property has about 1,000' of workings, showing ore assaying well in copper, silver and gold. Idle and presumably moribund.

#### UNITED ARIZONA COPPER CO., LTD.

ARIZONA.

Office: 1 Broad Street Ave., London, E. C., Eng. Mine office: Vekol, Pinal Co., Ariz. Rt. Hon. Earl of Orford, chairman; W. P. Guthridge, mine manager; J. Francis Shearer, secretary. Organized Oct. 15, 1902, under laws of Great Britain, with capitalization £200,000, shares £1 par; issued, £150,000.

Lands, 500 acres, known as the Reward mine, bought, Oct. 15, 1902, of Reward Consolidated Mining Co., circa 6 miles from Vekol. Company is said to have bought its lands for £160,000 cash, which statement is doubted. Property was bonded, 1907, for 30 months, to Casa Grande Development Co.

#### UNITED BIRMINGHAM GOLD & COPPER MINING CO.

UTAH.

Office: Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Louis Moore, president; A. Hanauer, Jr., secretary; Edward Hoffman, superintendent, at last accounts. Lands, several patented claims, partly developed by the Snowstorm tunnel, which has opened a 4' vein, giving assays of 2% copper, 25% lead and up to \$8 gold per ton. Idle.

#### UNITED COPPER CO.

IDAHO, MONTANA & UTAH.

Office: 42 Broadway, New York, N. Y. Operating offices: Butte, Mont., and Salt Lake City, Utah. F. August Heinze, president; Geo. Baglin, second vice-president; Stanley Gifford, secretary and treasurer; preceding officers, Wm. J. Curtis, Sanford Robinson, Chester Glass, John MacGinnis, Carlos Warfield and Horace G. Abel, directors.

Organized Apr. 28, 1902, under laws of New Jersey, with capitalization \$20,000,000, shares \$100 par, in \$5,000,000 preferred 6% cumulative stock, and \$75,000,000 common stock; issued, \$50,000,000, in \$5,000,000 preferred and \$45,000,000 common shares. Stock is listed on the Boston and Pittsburg stock exchanges. Metropolitan Trust Co., New York, Old Colony Trust Co., Boston, and Fidelity Title & Trust Co., Pittsburg, registrars. American Trust Co., Boston, Union Trust Co., Pittsburg, and O. S. Buckingham, New York, transfer agents. Annual meeting, first Wednesday in June.

Preferred stock is redeemable, at \$125 per share, in full or any portion thereof, upon any dividend date, on 3 months' notice. The board of directors has power to fix, determine and vary the disposition of any surplus, etc., from time to time, the powers of the board being practically absolute, and leaving shareholders without voice in the management, and apparently without recourse for mismanagement.

The company paid \$7,462,500 dividends to end of 1907, of which \$1,500,000 was paid on preferred and \$5,962,500 was paid on common shares, preferred dividends being \$150,000 in 1902, \$300,000 each in 1903, 1904, 1905 and 1906, and \$150,000 in 1907. First dividend on common shares was paid 1905.

Dividends on common shares were \$450,000 in 1905, \$3,150,000 in 1906, and \$2,362,500 in 1907. The common stock was placed, 1906, on a quarterly dividend basis, at rate of 7% per annum, but the company was unable to maintain this rate, after the depression in the metal market, followed by the panic of 1907.

For fiscal years ending June 1, the company's statements show income as follows: \$1,045,475 in 1904; \$1,513,850 in 1905; \$3,011,620 in 1906; \$861,023.97 in 1908, of which \$841,662.50 was from dividends on securities held, and \$19,361.47 from interest. President Heinze informed shareholders June, 1908, that the floating indebtedness of the company did not exceed \$1,100,000.

The United Copper Co. is a securities holding corporation solely, and was organized, ostensibly, along much the same lines as its former great rival, the Amalgamated Copper Co., except that the Amalgamated buys control of subsidiary corporations to retain, while the United is operated as a blind pool, under the personal direction of the president, and shareholders are unable to obtain any satisfactory statement as to what their holdings represent.

By reason of the settlement of the protracted litigation between the Amalgamated Copper Co. and United Copper Co., February, 1906, through the sale of the Heinze holdings in Butte to the Butte Coalition Mining Co., the status of the United Copper Co. was changed materially, the company having begun business as the owner of sundry stocks and bonds of various subsidiary mining and holding corporations operating in Butte, as given in detail in Vol. V. The price paid by the Butte Coalition Mining Co., for the various Heinze holdings taken over, is said to have been \$14,000,000, but apparently only part of this amount was in cash, the balance being in shares of the Butte Coalition Mining Co., which appreciated materially in market price, the consideration actually being rendered considerably greater than stated, in case the United Copper Co. sold its holdings in Butte Coalition at the high prices ruling in the copper share market during the latter half of 1906 and the first quarter of 1907. Apparently the United Copper Co. has disposed of the bulk of its Butte Coalition stock, which was its most valuable asset.

The shareholdings of the United Copper Co. are known only to the management, but are supposed to include, and possibly do include, control of the Montana Ore Purchasing Co., Basin Reduction Co., La France Copper Co., Ohio Copper Co. and Stewart Mining Co., latter owning a lead mine in the Coeur d'Alene district of Idaho. Some of the holdings in subsidiary corporations are of doubtful worth, while others are valuable, but in nearly every case the subsidiary corporations are in need of cash, for further development.

In May, 1906, the stockholders of the United Copper Co. authorized the sale of \$1,000,000 Montana Ore Purchasing bonds, and \$2,500,000 Nipper Consolidated bonds, at par, to the Butte Coalition Mining Co. This presumably was to carry out a bargain previously made, and it is presumed that the consideration was in shares.

Thos. M. Hodgens, an owner of 1,300 shares of preferred stock in the United Copper Co., and formerly cashier of the Heinze bank, at Butte, secured an alternative writ of mandamus, July, 1907, requiring the company to show its books, and disclose whence earnings were secured, but apparently no such disclosure was made. Mr. Hodgens alleges that earnings of the company were not more than \$1,000,000 in 1906, when an inspired article in the press said that the net profits, from various sources, were \$12,000,000. The company claiming earnings of \$3,011,620 in 1906. The United Copper Co. was unable, 1908, to finance La France Copper Co., a subsidiary corporation, to the extent of paying its taxes in Butte, amounting to about \$5,000 only.

The company's annual reports are not satisfactory, referring as they do, in the vaguest possible terms, to interests in subsidiary corporations, without

giving definite information as to the extent of such interests. At present the United Copper Co. does not control any producing mines. The Stewart lead mine is a property generally considered valuable. The Ohio Copper Co. probably is the chief asset of the United Copper Co. at the present time, and is a property of much promise. La France Copper Co. has a zinc mine, of doubtful value.

The United Copper Co. being operated as a blind pool, shareholders have no protection whatever, and are at the mercy of the management, which has not shown itself overscrupulous. Shareholders were tremendous losers in the slump of 1907, when both preferred and common shares declined to merely nominal values. Nobody outside of the management has any exact idea of what the company owns, or does not own, but it is certain that the company does not own anything like the equivalent of its capitalization, though some of its properties, notably the Ohio, are of decided promise.

#### UNITED COPPER CO.

**WASHINGTON.**

Office: 512-705 First Ave., Seattle, Wash. Mine office: Galena, Kittitas Co., Wash. Organized under laws of Washington, with capitalization \$2,000,000, shares \$1 par. Lands, 310 acres, also a 60-acre millsite, well timbered, with available water power, on Camp Creek, a branch of the Cle Elum river, said to show 8 veins, carrying chalcocite and chalcopyrite, the main vein, of 50' to 100' claimed width, said to be traceable 4 miles, carrying chalcopyrite, with a parallel vein and a cross vein carrying chalcocite. Mine is claimed to have circa 1,800' of tunnels, showing ore assaying up to 31% copper and \$5 to \$10 gold per ton. The Seattle Mining Exchange, having the same address as the company, claimed, 1906, in an advertisement, to have 1½ miles of chalcopyrite 50' to 100' wide, assaying \$50 to \$100 per ton, and copper glance 1½ miles in length assaying \$200 to \$300 per ton, with an 1,800' bornite ledge of 55' width adjoining the property on the same ledge, latter having a paystreak giving \$1,400 per ton in gold, in addition to copper, which statements must have been made by a lunatic or a colossal liar. Property considered promising, but standing of company has been injured by the preposterous falsehoods told in its behalf.

#### UNITED COPPER EXPLOITATION & MINING CO.

**NEVADA.**

Office: 511 Continental Bldg., Denver, Colo. Mine office: Ely, White Pine Co., Nev. A. L. Emberson, president; W. E. Flodin, vice-president; M. C. McKinnon, secretary and treasurer. Organized May, 1907, under laws of Arizona, with capitalization \$10,000,000, shares \$1 par. Lands are said to be 2 claims in the Ely district, and 12 claims in the Ward district, both in White Pine county. Promoters notified the public to come in as "ground floor organizers," on the basis of \$250,000 cash for the lands, which seems a long way from the ground floor. Advertisements of company were highly untruthful and misleading. Cannot be learned that any development has been made, and company apparently is merely a bit of stock-jobbery.

#### UNITED COPPER-GOLD MINE'S CO.

**OREGON.**

Office and mine: Grants Pass, Josephine Co., Ore. O. S. Blanchard, president; O. A. Thomas, secretary and manager. Lands, on Pickett Creek, an affluent of the Rogue River, 14 miles south of Grants Pass, are said to show veins of 5' to 10' width, carrying ore similar to that of the Waldo mine, giving assays of 6 to 8% copper and \$30 to \$100 gold per ton.

#### UNITED COPPER-GOLD MINING & EXTRACTION CO.

**ARIZONA.**

Dead. Formerly at Tucson, Pima Co., Ariz.

#### UNITED COPPER MINING CO.

**WASHINGTON.**

Office: 211 Jamison Bld., Spokane, Wash. Mine office: Chewelah, Stevens

**Co., Wash.** Employs circa 30 men. Conrad Wolfie, president and general manager; J. W. Beckett, vice-president; Gale Smith, secretary and treasurer; Frank Vilwoek, superintendent; Wm. H. Stowell, engineer. Organized July 16, 1906, under laws of Washington, with capitalization \$1,000,000, shares \$1 par; issued, \$850,000. Bonds, \$20,000 authorized. Annual meeting, fourth Thursday in January.

Lands, 8 claims, 2 fractional, unpatented, area 165 acres, also 200 acres miscellaneous lands, in the Chewelah district, 6 miles from a railroad, showing shale and schist, carrying an ore body of 8' average width, traceable 800', showing malachite, chalcopyrite and tetrahedrite, estimated to average 2.9% copper, 6 oz. silver and 40 cents gold per ton. Ore is mainly chalcopyrite, with occasional native silver.

Development is by shafts of 65', 175' and 270', and by an 1,100' tunnel on the Copper King property, of which 735' is crosscut and 365' in ore, mine having 1,610' of workings, estimated to show 100,000 tons of ore.

Equipment includes a 150-h. p. steam plant, with hoist, 2-drill and 4-drill Franklin air-compressors, and 7 power drills. There are 5 mine buildings, including a 16x24' wooden machine shop.

Production 1907 was 11,097 lbs. fine copper and for 1908 was circa 360,000 lbs. fine copper, and is estimated by company as likely to be about 1,000,000 lbs. in 1909. Ore was shipped to the Northport smelter. Company plans continuous development and building a 6-mile railway spur. Property considered promising.

#### UNITED ELY COPPER CO.

NEVADA.

Office: Goldfield, Nev. Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. G. L. Rickard, president and general manager; E. L. Colburn, vice-president; W. H. Waterman, secretary; H. Cook, treasurer; H. Chase, superintendent. Organized Oct. 22, 1906, under laws of Nevada, with capitalization \$5,000,000, shares \$5 par. Lands, 20 claims, area 400 acres, tested by two 250' churn drill holes, showing no copper.

#### UNITED ELY MINES CO.

NEVADA.

Mine office: Ely, White Pine Co., Nev.

#### UNITED EMPIRE CO.

BRITISH COLUMBIA.

Dead. Was succeeded, December, 1906, by United Empire Co., Ltd. Formerly at Princeton, Boundary district, B. C. Fully described Vol. VI.

#### UNITED EMPIRE CO., LTD.

BRITISH COLUMBIA.

Office and mine: Princeton, Yale district, B. C. Wm. C. McDougall, president and general manager; John M. Smith, secretary; preceding officers, Mrs. M. L. McDougall, John M. Murray and E. L. Reid, K. C., directors. Organized December, 1906, under laws of British Columbia, as successor of United Empire Co., with capitalization \$500,000, shares \$1 par; issued, \$300,000. Annual meeting, first Tuesday in November.

Lands, 9 claims, area 250 acres, also 692 acres of coal lands and 2,500 acres of miscellaneous lands, in the Similkameen district. The copper lands show limestone, diorite and sandstone, carrying 2 ore bodies, of which one, under development, is estimated at 100' width, and is said to be traceable 4,500', carrying malachite and occasional azurite, with chalcopyrite at depth, ore being estimated to average 2% copper, 2 to 4 oz. silver and \$1 to \$2 gold per ton. Development is by shafts of 30' and 50', and by tunnels of 125', 225' and 80'. There are about 2,000 tons of ore available for extraction, but no ore has been blocked out for stoping. Adjoining the copper ore, on the western boundary, is a series of coal measures, apparently of promise. Fuel is coal mined from the company's lands, costing circa \$1.50 per ton. Management plans continuous development.

**UNITED EXPLORATION CO.**

WYOMING.

Office: 113 Devonshire St., Boston, Mass. Mine office: Battle, Carbon Co., Wyo. Succeeded Beulah Copper Co. Lands, 13 claims, area circa 250 acres, developed by an 800' tunnel. Idle several years and presumably moribund.

**UNITED GERMAN COPPER MINES, LTD.**

GERMANY.

Dead. Dissolved, September, 1904. Formerly at Münster-am-Stein, Bavaria, Germany.

**UNITED GLOBE MINES.**

ARIZONA.

Office: 20-99 John St., New York, N. Y. Mine office: Globe, Gila Co., Ariz. Jas. Douglas, president; Geo. Notman, secretary and treasurer; Niles S. Berray, superintendent; Robt. B. Ridder, chief clerk. Capitalization \$2,300,000, shares \$100 par. Is controlled, through ownership of majority of stock, by Old Dominion Co. Paid dividends of \$6.50, Dec. 15, 1905, and \$4, July, 1907.

Lands, 29 claims, lying west of the Old Dominion group, also 3 millsites. The mine is extensively developed, having a 765' three-compartment shaft, showing a vein of circa 30' width, carrying an ore chute of 700' length, averaging 4% copper and upwards. Early 1908 the Maggie vein was cut, 85' north of B shaft of the Old Dominion, on United Globe ground, this showing sulphide ore of excellent average tenor, including considerable massive chalcopyrite. The ore bodies of the United Globe are extensive, but erratic, and are highly silicious, requiring heavy fluxing, and the mine is wet. Leasers formerly working on the property produced ores averaging 20% copper and 1 to 15 oz. silver per ton, but the first grade ore mined by the company now averages circa 14% copper, or less.

A 200-ton smelter has been idle for some years, and is not likely to be blown in again, as the mine is operated under a close working agreement with the Old Dominion Copper Mining & Smelting Co., details of which are given in the description of the Old Dominion Co., and, to all practical intents and purposes, the United Globe is now a portion of the Old Dominion mine.

Production was 4,607,537 lbs. fine copper and 5,277 oz. silver in 1906, and 3,399,084 lbs. fine copper and 12,382 oz. silver in 1907.

**UNITED GOLD & COPPER CO.**

ARIZONA.

Office: Columbian Bank Bldg., Pittsburg, Pa. Mine office: Hereford, Cochise Co., Ariz. J. L. Currier, president; S. B. Manning, secretary and treasurer. Capitalization, \$1,000,000. Lands, 11 claims, area 220 acres, 7 miles from Hereford, said to give fair surface indications of copper, with a 137' tunnel. Idle.

**UNITED GOLD & COPPER CO.**

NEW MEXICO &amp; CALIFORNIA.

Dead. A swindle that sold stock and paid dividends simultaneously. Formerly at Lordsburg, Grant Co., N. M. Fully described Vol. V.

**UNITED GOLD & COPPER MINING CO.** COLORADO & NEW MEXICO.

Dead. A swindle. Formerly at Turret, Chaffee Co., Colo. Described Vol. V.

**UNITED GREENWATER COPPER MINING CO.** CALIFORNIA.

Dead. Merged Dec. 12, 1906, in the Greenwater & Death Valley Mining & Smelting Co. Formerly at Greenwater, Inyo Co., Cal.

**UNITED METALS CO.**

ALASKA.

Mine office: Coppermount, Prince of Wales Island, Alaska. Harry Corbin, superintendent, at last accounts. Lands, about midway between Coppermount and Sulzer, giving a promising showing of high grade ore, and a little ore was shipped, 1905, to the Coppermount smelter. Presumably idle.

**UNITED METALS SELLING CO.**

NEW YORK.

Office: 42 Broadway, New York, N. Y. Works office: Perth Amboy, Middlesex Co., N. J. Adolph Lewisohn, president; Henry H. Rogers, vice president; A. W. Evarts, secretary; Urban H. Broughton, general manager;

**R. W. Stuart-Wortley**, treasurer; preceding officers, Wm. Rockefeller, Jesse Lewisohn and Frederick P. Olcott, directors. Organized Jan. 29, 1900, under laws of New Jersey, with capitalization \$5,000,000, shares \$100 par. Regular dividend is 7½%, quarterly. Dividends have been 15% in 1900; 5% in 1901; 10% in 1902, 1903 and 1904; 20% in 1905 and 1906, and 30% in 1907, with total dividend disbursements of \$6,250,000 to Dec. 31, 1907.

The company does a general commission business in metals, and is the largest copper broker in the world, being sales agent for the Amalgamated Copper Co. and producers affiliated with the Amalgamated, and a considerable number of independent producers. This company "held the umbrella" over the copper market in 1901, and again in 1907, enabling independent companies to market their copper, while the production of the Amalgamated and its affiliated companies was held back. Company sells yearly, 200,000,000 to 250,000,000 pounds of Amalgamated copper, and 250,000,000 to 300,000,000 pounds of other copper, on a commission, formerly 1½%, which was cut, 1906, to 1%, when copper passed 18 cents per pound in price. The commission is by no means excessive, in view of the facilities offered, these including the guarantee of all sales accounts, and, when desired, advances of 75 to 90% of the invoice value of copper. A considerable part of the company's profits are derived from its extensive refining operations.

The Raritan Copper Works, on New York Harbor, completed 1899, and since enlarged, is one of the largest and most modern copper refining plants in the world, the works including a smelter and mammoth electrolytic refinery. The smelter, having 2 furnace buildings, has two 100-ton furnaces casting anodes in iron moulds on a mechanical conveyor, and two 150-ton casting furnaces for wire-bars and anodes.

The electrolytic refinery includes two tankhouses and a power-house, connected by 3' concrete tunnels, power consumption being about 3,000 kilowatts, the works having a capacity of nearly 1,000,000 lbs. finished copper daily. No. 1 is the old and No. 2 the new tankhouse, latter completed circa 1907. No. 1 tankhouse has 1,600 tanks, each holding 21 anodes and 21 cathodes, of size 24x36", using a current of 5,000 amperes, with a cross-sectional area of only 5 square inches in the busbars.

No. 2 tankhouse is 150x184' in size, having concrete foundations, with steel frame and brick walls, special Berlin brick being used for the basement floor, these being considered acid-proof. Permanent equipment includes 1,370,000 pounds of lead, of which 1,500,000 pounds are in tank linings, and 581,000 pounds of copper, divided as follows: copper cathode rods, 186,000 pounds; stripping plates, 122,000 pounds; busbars- and connections, 170,000 pounds; leads, etc., 100,000 pounds; lead anode rods, 300,000 pounds. No. 2 tankhouse has 3 bays, running lengthwise, with two 10-ton 3-motor Whiting cranes in each bay, equipped with special devices for handling an entire tankful of anodes or cathodes at one load. No. 2 tankhouse has 3 electric circuits, running lengthwise, one in each bay, each circuit of 396 tanks being handled from the power-house by one electric generator. Current is 7,500 amperes, giving a current density of 20 amperes per square foot. Main conductor has a cross-sectional area of 12¾". There are 1,188 depositing tanks, arranged in 108 nests of 11 cells each, electrode arrangement being on the Walker system, tanks being lined with 6-pound lead containing 4% antimony. There also are special tanks for rinsing the cathodes, after removal from depositing tanks, and tanks for scrubbing slimes from scrap anodes, latter amounting to about 13% by weight. Works have special shears for trimming cathode loops, and a Morrow loop machine for attaching copper lugs to the cathode starting sheets. Anodes are 28x36" and cathodes are 30x37", each tank having 24 anodes and 25 cathodes, spaced on 4¾" centers, cathodes remaining in tanks

14 days and anodes 28 days. In No. 1 tankhouse the anodes require 35 days for corrosion.

The general direction of the electrolytic circuit is lengthwise, but circulation of the electrolyte is crosswise, and, for circulation purposes, No. 2 tankhouse is divided into 6 units, of 198 tanks each, the circulation rate being about 4 gallons of electrolyte per tank per minute, solution entering bottoms of tanks and overflowing from tops. Adjoining the tankhouse is the pump-house, having hard-lead centrifugal pumps for circulation of the electrolyte, pumps having no stuffing-boxes or wearing parts coming in contact with the electrolyte, the shaft-bearings being placed above the level of the inflowing solution. These pumps are giving excellent service. Slimes are screened and washed through launders to a sump, and are pumped thence to receiving tanks in the silver refinery. The works employ about 1,000 men, when operated to their full capacity.

#### UNITED MINES CO.

#### ARIZONA.

Office and mine: Globe, Gila Co., Ariz. Organized 1904, with capitalization \$5,000,000. No trace of operations and presumably moribund.

#### UNITED MINING CO.

#### UNITED STATES, CANADA & MEXICO.

Office: 66 Broadway, New York, N. Y. John Thompson, president; Albert Freeman, vice-president; John R. Stanton, treasurer; John McKinnon, secretary; preceding officers and Josiah Quincy, directors; E. A. Tays, managing engineer. Organized Jan. 17, 1905, under laws of Maine, with capitalization \$6,000,000, shares \$10 par, in \$1,000,000 cumulative 6% preferred stock and \$5,000,000 common stock, as successor of United Mining & Development Company of America. Is a promotion and development company, planned to develop and finance mines along much the same lines as the Venture Corporation of London.

The King Solomon mine, area 40 acres, in Calaveras County, California, is a gold property which has not proven satisfactory, and is idle.

The Century mine, at Brownell, Pima County, Arizona, formerly held by the Producer Mining Co., Frank Brownell, superintendent, has a 100' shaft, showing a 2' vein carrying auriferous and argentiferous copper ore of medium grade.

The lands at Leadville, Lake County, Colorado, were 320 acres, of which apparently 40 acres have been leased to the John Thompson Mining Co.

The Monitor mine, at Saltese, Missoula County, Montana, formerly held under bond, has been surrendered. Company is said to hold the Greene-Campbell mines, near Silver Star, Madison County, Montana, and the Buckeye mine, in Flathead County, Montana.

Company is said to have mining interests in the Black Hills of South Dakota.

The Navajo group, apparently 6 claims, held on royalty of 12½%, showing mainly gold ores, is near Bland, Sandoval County, New Mexico. Company is said also to have lands in the Cochiti district of New Mexico.

The Nevada de los Miches mine, area 107 hectares, near Fuerte, Sinaloa, Mexico, has auriferous copper ores, but apparently property has been surrendered. The Aztec copper mines are 12 miles from Alamos, Sonora. Three groups, including the Maconi mines, at Cadereyta de Montes, Queretaro, Mexico, apparently are tied up by litigation over titles with O. y T. Braniff.

The Oldham-Stirling gold mine is circa 20 miles from Halifax, Nova Scotia, and the Cariboo Consolidated copper mine is in the same neighborhood.

#### UNITED MINING & DEVELOPMENT CO. OF AMERICA. U. S. A. & MEXICO.

Dead. Succeeded Jan. 17, 1905, by United Mining Co. Described Vol. VI.

#### UNITED PEAK DOWNS COPPER & COAL CO., LTD.

#### AUSTRALIA.

Office: Brisbane, Queensland, Australia. Mine office: Copperfield, Cler-

mont Co., Queensland, Australia. John Currie, chairman; Currie, Buchanan & Co., secretaries; J. T. Coates, mine manager; W. H. Rands, consulting engineer. Organized circa April, 1908, under laws of Queensland, with capitalization £75,000, shares 7s. 6d. par; issued, 180,000 shares, 3s. 6d. paid up. Company was a reconstruction of the Peak Downs Freehold Copper & Coal Co., Ltd., which was a reconstruction of the Peak Downs Copper Co.

Lands, circa 1,200 acres, freehold, exempt from labor conditions. Property is the old Peak Downs mine, which, in early days carted ore circa 300 miles, securing profits therefrom of £278,250 in 15 years' operation. The mine, reopened 1906, by predecessors of present company, has a vein of 2' to 3' average width carrying chutes of high-grade ore, and 3 narrow parallel veins of 6" to 20" width. Ore, as a whole, averages circa 4.5% copper. The mine, opened to depth of 270', has been thoroughly retimbered, and, when reopened, old pumps and pipes were found converted into copper precipitate, by the action of the acid mine waters.

The smelter, built some years ago, has reverberatory furnaces, and a new 100-ton water-jacket-blast furnace was blown in, July 24, 1907, working intermittently until October, 1907, when smelting was suspended, on account of the low price of copper. Production, when the smelter was in blast, was said to be circa 7 tons of matte daily, and a small amount of regulus was secured also. Production, 1907, is estimated at 500,000 lbs. fine copper. Mine is considered decidedly promising, but will require extensive development, its eyes having been picked out by the old management.

#### UNITED REEFS, N. I.

#### AUSTRALIA.

Office: 378 Queen St., Brisbane, Queensland, Australia. Mine office: Black Snake, Kilkivan, Queensland, Australia. C. C. Moulton, secretary; Cecil Rae, general manager. Lands, known as the Shamrock mine, are 16 miles south of Kilkivan. Smelter has a 50-ton blast furnace and 2 reverberatories, difficulty being experienced in securing adequate supplies of fuel and flux. Ore smelted 1906 averaged 1% copper, 1 oz. silver and 9 dwts. gold per long ton. Employed circa 60 men at last accounts.

#### UNITED STATES & BRITISH COLUMBIA CO.

#### MONTANA.

Mine office: Corbin, Jefferson Co., Mont. Lands, known as the Burton group, have 2 shallow shafts and a tunnel.

#### UNITED STATES COPPER CO.

#### IDAHO.

Mine office: Mullan, Shoshone Co., Idaho. Lands, 5 claims, known as the McGowan group, on Snowstorm Hill, east of the Missoula Copper Mining Co.

#### UNITED STATES COPPER MINES, INC.

#### ARIZONA.

Office: Louisville, Ky. Mine office: Wickenburg, Yavapai Co., Ariz. Geo. A. Newman, Sr., president; J. C. Parker, vice-president; Geo. A. Newman, Jr., secretary and treasurer; Hector McRae, general superintendent; preceding officers, Bernard Flexner, J. C. Parker, Samuel Taylor and W. D. Mahaney, directors. Organized under laws of Kentucky, with capitalization \$2,000,000.

Lands, 900 acres, said to have a 9' vein, with a 15" paystreak assaying 25% copper, 3 oz. silver and \$2.50 gold per ton, opened by 25 pits and shafts of 14' to 500' depth. Company is backed by Louisville businessmen of good standing, but in advertisements, January, 1907, claimed to have a copper mine and not a prospect, which is not the truth, and to have 30,000,000 tons of high grade copper ore blocked out, which is absolutely untrue. Company claimed that it could produce copper at 6 cents per pound, which remains to be proven. One enthusiastic shareholder feels certain that the mines are superior to any in Arizona for several reasons, one of which is that a smooth wagon road stretches 12 miles from the end of the railroad to the mine, and this unprecedentedly

satisfactory transportation means facilities "untouched by any other great property." Is not regarded favorably.

**UNITED STATES GOLD & COPPER CO.**

WASHINGTON.

Dead. Formerly at Chewelah, Stevens Co., Wash.

NEVADA.

**UNITED STATES GOLD & COPPER CORPORATION.**

Office 1410 Real Estate Trust Bldg., Philadelphia, Pa. Mine office: Humboldt House, Humboldt Co., Nev. John McKinley, chairman; Jas. H. Beall, president; J. Uhle Bethell, vice-president; Wm. Steele, treasurer; J. R. Humphrey, secretary; preceding officers, N. L. Gartner, B. Howard Coffin, A. E. Wager and Wm. Bromer, directors; Jas. McKinley, manager; W. E. Adamson, consulting engineer. Organized under laws of Nevada, with capitalization \$2,500,000, shares \$1 par. Lands, 12 claims, area 240 acres, showing about 1,000' of old workings, including a 370' tunnel, property also having a 170' new tunnel, driven by present management. President states that no mine in the world offers a better showing than this, which, of course, is not true. Is not regarded favorably.

**UNITED STATES GOLD CORPORATION.**

COLORADO.

Office: 67 Fonda Blk., Boulder, Colo. Mine office: Eldora, Boulder Co., Colo. Edward Monroe, president and general manager; M. T. Garretson, vice-president; John R. Wolff, secretary; W. L. Dayton, treasurer; John F. Rowell, superintendent. Lands, 300 acres, in the Arapahoe copper-gold belt. Presumably idle.

**UNITED STATES & GUERRERO EXPLORATION CO.**

MEXICO.

Office: Ashland, Ky. Dr. J. Letton Martin, president. Capitalization, \$1,000,000. Lands, claimed to be 148 acres, in the states of Guerrero and Michoacán, latter near the Inguarán mine. No trace of operations and presumably moribund.

**UNITED STATES METALS REFINING CO.**

NEW JERSEY.

Office: 100 Broadway, New York, N. Y. Works offices: Chrome, Middlesex Co., N. J., and Grasselli, Lake Co., Ind. Employs about 750 men at the Chrome works, and 125 at the Grasselli works. W. G. Sharp, president; L. Vogelstein, vice-president; E. J. Hothorn, secretary; F. W. Batchelder, treasurer; preceding officers, W. H. Coolidge, Edw. A. Clark and Ambrose B. Todd, directors; H. A. Prosser, general manager; Lawrence Addicks, superintendent Chrome works; Wm. Thum, superintendent Grasselli works.

Organized November, 1903, under laws of New Jersey, and reorganized Oct. 15, 1906, with capitalization \$4,000,000, shares \$100 par, half in 7% cumulative preferred and half in common shares; issued, \$3,100,000, half preferred and half common stock. Is controlled, jointly, through stock ownership, by United States Smelting, Refining & Mining Co., and Aron Hirsch & Sohn, of Halberstadt, Germany. Annual meeting, second Tuesday in May.

The Chrome works, of 12,000,000 lbs. monthly capacity, include a complete smelting and converting plant for the treatment of ores, concentrates, mattes and bullion, copper supplies being received mainly from Utah, Montana, Arizona, California and British Columbia, with odd lots picked up from other fields. The smelting department includes two 75-ton reverberatory furnaces, for remelting blister copper, and 2 furnaces for remelting cathode copper. There also is a circular blast furnace, 42" at the tuyeres and 13' high, using an 11-oz. blast pressure. Waste gases from the reverberatories are burned under a Babcock & Wilcox boiler. The power plant includes steam-driven dynamos of 1,000 and 1,200 h. p., giving, respectively, 5,500 amperes at 115 volts, and 6,500 amperes at 130 volts. The converter department has a monthly capacity of 3,000,000 lbs. finished copper.

Metal is received in slabs and cakes, and cast into anodes weighing 350 to 400 lbs., by a Walker casting machine having 22 moulds, and anodes are

transferred, in sets of 15, from the casting machine to the electrolytic tanks, by electric traveling cranes.

The electrolytic plant has 816 cells, forming two systems of 12 compartments with 34 baths each, 408 cells in a system. Tanks are lead-lined, 3' 6" broad, 3' deep and 10' long, each bath containing 15 anodes and 16 cathodes, the extra cathode providing terminal plates. Cells are arranged in steps, in two rows, with a 12" drop between tanks. Current is conveyed to the cells by copper leads of  $1\frac{1}{2}$  x  $1\frac{1}{4}$ ". Current density is 15 to 17 amperes per square foot, and the difference of potential of bath is 0.3 volts. The cell bath temperature is 52° to 57° C. Electrolyte contains 40 grams copper and 140 cc. sulphuric acid per liter. The blister copper treated contains antimony, arsenic, selenium, and tellurium, as well as copper, nickel, gold and silver, and the sludge from the tanks is treated by filter presses and refined in a cupel furnace for gold and silver values. As much silver is volatilized in refining, the gases from the furnace are drawn off by a fan, then cooled and filtered through flannel sacks, before entering the stacks. From the waste electrolyte liquor, crude nickel sulphate and copper sulphate are made, there being, in connection with the refinery, a sulphate plant where bluestone is produced for the requirements of the works.

The Grasselli plant, consisting of a 75-ton electrolytic lead refinery, at Grasselli, a suburb of Chicago, was the first electrolytic lead refinery in the United States.

The plants of the United States Metals Refining Co. are strictly modern in design and equipment, and are noted for the technical and commercial excellence of their practice.

#### UNITED STATES & MEXICAN MINING CO.

MEXICO.

Office: 42 Murray St., New York, N. Y. Mine office: Hostotipaquito, Ahualulco, Jalisco, Mex. Isaac P. Martin, manager. Lands include the Trinidad and Guadalupe mines, carrying auriferous and argentiferous copper and lead sulphides. Has water power, employing circa 75 men, at last accounts.

#### UNITED STATES & MEXICO CONSOLIDATED MINING CO.

MEXICO.

Office: 110 State St., Boston, Mass. Letter returned unclaimed from former mine office, La Cananea, Arizpe, Sonora, Mex. W. C. Humphrey, president; E. Allen, secretary; Geo. W. Farrington, superintendent. Organized January, 1906, under laws of Arizona, with capitalization \$2,500,000, shares \$5 par. Lands, 30 pertenencias, area 74 acres, on the western slope of the Sierra Madres, circa 30 miles east of Cananea, said to have a shaft. Company claimed to plan shipping 300 tons weekly, by wagon, and also claimed to plan building a 300-ton smelter, but apparently neither shipped ore nor built a reduction plant. Regarded with suspicion.

#### UNITED STATES MINING CO.

UTAH.

Office: 400-55 Congress St., Boston, Mass. Operating office: 508 Dooly Blk., Salt Lake City, Utah. Mine offices: Bingham Canyon, Salt Lake Co., Utah, and Eureka, Juab Co., Utah. Wm. G. Sharp, president; Wm. F. Coolidge, vice-president; F. Winthrop Batchelder, secretary and treasurer; Albert F. Holden, managing director; Frederick Lyon, assistant managing director; preceding officers, R. D. Evans, Eugene N. Foss, N. W. Rice, E. C. Swift, J. J. Storror and Sidney W. Winslow, directors; Hon. C. E. Allen, general manager; A. P. Maybury, mine superintendent at Bingham; R. A. Brown, mine superintendent at Tintic; Richard E. Parker, consulting engineer; Percy Williams, engineer; Aron Hirsch & Sohn, sales agents.

Organized 1899, and reorganized, 1901, under laws of Maine, with capitalization \$15,000,000, shares \$25 par. Debentures \$500,000 due May, 1909. Is controlled, through ownership of 98% of stock issue, by United States Smelting, Refining & Mining Co., stock control having been obtained through exchange.

of shares, with a cash bonus paid to the United States Mining Co. Controls, through ownership of entire capital stock, the United States Smelting Co.; controls, through ownership of practically entire stock issue, the Centennial-Eureka Mining Co.; controls, through ownership of majority of stock and bonds, Niagara Mining & Smelting Co.; owns a half interest in the International Metals Selling Co. National Shawmut Bank, Boston, registrar. Annual meeting, in October.

The properties at Bingham include the Old Jordan, Telegraph, Commercial, Galena and adjoining claims. The Niagara mine also is held, through a controlling stock interest. The United States Supreme Court decided, October, 1907, in favor of the company in the litigation with Col. E. A. Wall over the Kempton lode. The mines are timbered with 8x3" Oregon pine, and were said, 1906, to have about 2,000,000 tons blocked out for stoping, of which about 90% was low grade ore. The Bingham mines have an aerial tramway, of 25 tons hourly capacity, taking ore to the railway.

The Old Jordan and Telegraph properties were silver mines originally, opened on a fissure vein of silver-lead ore crossing the big sulphide copper dyke from which production has been secured latterly. The Old Jordan group has about 5 miles of workings, developing a large amount of ore. Copper ores are silicious and deficient in iron, requiring heavy fluxing, ranging in tenor from 1.5% to 2% copper, 2 to 5 oz. silver and \$1 to \$2.50 gold per ton, and are said to give smelter returns of 26 to 28 lbs. copper, and \$2 to \$2.50 combined gold and silver values per ton. Litigation over the Old Jordan was settled, 1905, in company's favor.

The Galena mine, reopened circa 1905, is said to have produced upwards of \$1,000,000 worth of ore, under previous ownership, with average smelter returns of 20% lead, 25 oz. silver and up to \$10 gold per ton. The Galena carries low grade copper values, in addition to auriferous silver-lead ores, and was shipping circa 400 tons daily, 1907, until suspension of work, in September.

The Centennial-Eureka mine, of the Tintic district, is described elsewhere, under the title of its owner, the Centennial-Eureka Mining Co.

In addition to its metalliferous mines, the United States Mining Co. owns a large limestone quarry and iron mines, supplying flux, and has coal mines, the colliery having a coking plant in connection. The advantages pertaining to control and ownership of ores, fluxes, fuel and smelter, under a single management, are very great.

Smelting is done by the United States Smelting Co., a subsidiary corporation, and the smelter is described under title of its owner.

Production was 15,841,867 lbs. fine copper for 1905, and for fiscal year ending Oct. 1, 1905, the smelter produced, from Utah ores, 14,965,438 lbs. fine copper, 10,208,226 lbs. lead, 2,107,956 oz. silver and 71,445 oz. gold. For later years production is included in figures of United States Smelting, Refining & Mining Co., which also include California copper production, from the Mammoth mine. Smelting was suspended, at the end of 1907, but lead smelting was resumed, 1908, and copper smelting is to be resumed, early 1909. Further details regarding closely related interests will be found in the descriptions of the United States Smelting Co. and United States Smelting, Refining & Mining Co.

#### UNITED STATES MINING CO.

#### WYOMING.

Office: 1204-37 Wall St., New York, N. Y. Henry T. Clarke, Jr., president; John T. Clarke, vice-president and treasurer. Capitalization \$1,500,000. shares \$10 par, in \$500,000 preferred and \$1,000,000 common shares. Is a securities holding corporation only, controlling a majority of the outstanding stock issue of the Doane Verde Mining Co., and share interests in the Battle Lake Tunnel Site Mining Co., Penn-Wyoming Copper Co., and Newsboy Mining & Milling Co., latter of Ouray, Colorado. Company also has an interest in a

tract of mineral land near the Reindeer, Bessie Wilgus and Coon Valley mines, at Leadville, Lake Co., Colorado.

**UNITED STATES & NICARAGUA CO.**

NICARAGUA.

Office: 345 Fourth Ave., Pittsburg, Pa. R. A. Smith, president; M. K. Salsbury, vice-president; Wm. Rees, secretary and treasurer. Organized Apr. 20, 1903, under laws of Maine, with capitalization \$1,000,000, shares \$100 par. Property is an exclusive government concession for mining, covering the two northern states of Chinandega and Segvoia, in the republic of Nicaragua. Idle.

**UNITED STATES SMELTING CO.**

COLORADO.

Office: Colorado Springs, Colo. Mine office: Cañon City, Frémont Co., Colo. J. D. Hawkins, president; Chas. J. Bocking, manager; R. H. Hawley, superintendent. Property is a 100-ton custom smelter, treating mainly zinc ores, but handling also some copper and lead ores.

**UNITED STATES SMELTING CO.**

UTAH.

Office: 400-55 Congress St., Boston, Mass. Operating office: 508 Dooly Blk., Salt Lake City, Utah. Works office: West Jordan, Salt Lake Co., Utah. A. F. Holden, managing director; Hon. C. E. Allen, general manager; H. A. Prosser, metallurgical director; Geo. W. Heintz, superintendent; H. C. Bellinger, consulting metallurgist; T. R. Jones, manager custom ore department. Is controlled, through ownership of entire capital stock, by United States Mining Co., which, in turn, is controlled by United States Smelting, Refining & Mining Co.

Lands, 150 acres, near the Utah Consolidated and Bingham smelters, 12 miles from Bingham and 80 miles from Tintic. The reduction works, which do a general custom business, include a 100-ton concentrator, on the bank of the Jordan river, southwest of the smelter, and 2 sampling mills.

The smelter, of circa 2,500 tons daily capacity, includes lead and copper departments. The lead smelter, built 1904, has three 100-ton water-jacket blast-furnaces, and six 70' hand-roasters. In 1908 there were installed 26 converter-roasters, for lead ores, which, in effect, are sintering furnaces, adapted to raw ores. Each converter-roaster consists of a brick-lined square shell, 6x6x3', with a 3' hood, and a bottom of grate-bars, through which comes a 9-ox. blast. Charges require about 12 hours treatment, sintering to a solid cake, which is discharged by ram, like coke from a by-product oven, after which the sintered cakes are broken in a Blake crusher, and crushed material conveyed automatically to steel-cars, going thence to bins in the furnace-house, where mixed with charges for the blast-furnaces.

The copper department has six 200-ton water-jacket blast-furnaces, and a 125-ton reverberatory furnace. Pyritic smelting, employed originally in the copper stacks, was abandoned. The converter department has 2 stands, with an electric traveling crane, briquetting plant for fires and flue-dust, and a silica mill. The smelter has a 300' steel stack, connected with the furnaces by a flue, and separate brick flues lead to a baghouse.

The baghouse is perhaps the best planned and constructed, and certainly is one of the most successful, in existence. The building is 58x192' in size, with an addition of one-half the size under construction, late 1908. The baghouse is in 5 compartments, with steel floor, underneath which is a 12' basement, with 5 cellars, each divided into 3 sections. There are 2 fans, driven by a 100-h. p. electric motor, drawing smoke and fumes from all parts of the smelter. The gases, having an initial temperature of 300° C., are cooled, by passing through 3 series of steel tubes, from one brick chamber to another, 10 tubes, each 2' in diameter and 20' long, connecting each chamber, the gases going finally through a steel tube 30' long and 6' in diameter, into the baghouse,

which has 2,200 bags, each 32' 6" long and 18" in diameter, canvas bags being used for blast-furnace gases and woolen bags for gases from the roasting plant. The bags are hung vertically, with metal thimbles at top and bottom, the upper ends being closed, and lower ends opening into the dust-cellars, the floor of the baghouse above the basement having 18" circular holes, with thimbles 6" high and 18" in diameter extending upward from each hole, over which the feet of the bags are slipped. Apparently the bags wear for a long time. The bags are shaken every 12 hours, the workman who does this wearing a rubber suit and metal helmet, with a supply of compressed air for breathing, but an apparatus has been devised for shaking the bags simultaneously, from a point outside the chambers. The dust from the bags, amounting to about 5 tons daily, is wetted down and taken to the briquetting plant, where it is converted into briquettes, and charged into the furnaces. Gases, after leaving the baghouse, contain less than 0.75%, by volume, of sulphurous fumes, this amount being the maximum permitted by the courts.

The baghouse saves considerable zinc, lead and silver, previously lost through volatilization, and the management plans utilizing some of the zinc heretofore lost. The dust from the bags returns about 30% lead, with a heavy proportion of arsenic. Patents have been applied for in connection with a new process, providing for the neutralization of sulphurous gases with zinc oxide, to form zinc sulphate, which will be retained in the baghouse, the reaction taking place in the flues, while the fumes pass to the baghouse at a temperature a little higher than 100° C. The baghouse produces zinc oxide, from crude zinc sulphide and other materials not yet disclosed, which is mixed with 50%, by weight, of crushed coke, dampened, and fed upon the grates of a battery of 5 small furnaces, each about 15' long and 3' wide, with party walls, the mixture being maintained at a thickness of about 12" upon the grates, each furnace having a capacity of 5 tons daily.

Late 1908 the management was installing an arsenic plant, with Brunton furnace and a series of brick condensing chambers for crude arsenic, and a refining-furnace having brick condensing chambers for white arsenic, similar to the plant at the Washoe works.

The power-house at the smelter has a 750-h. p. General Electric steam turbine, with blowers, air-compressor and an electric light plant.

The smelter was closed down, circa October, 1907, owing to an unfavorable court decision, restraining the company from polluting the atmosphere in the Salt Lake Valley, to the detriment of agricultural interests. The court permitted resumption of lead smelting, early 1908, and at the end of the year the company planned resuming copper smelting shortly, with the aid of a baghouse to care for deleterious sulphurous and arsenical fumes.

Further particulars in connection with this company will be found in the description of the United States Smelting, Refining & Mining Co.

#### UNITED STATES SMELTING, REFINING & MINING CO.

#### UNITED STATES & MEXICO.

Office: 400-55 Congress St., Boston, Mass. Operating office: 508 Dooley Bldg., Salt Lake City, Utah. Wm. G. Sharp, president; Chas. G. Rice, vice-president; A. F. Holden, managing director; preceding officers, B. Preston Clark, Robt. D. Evans, J. J. Storrow and Sidney W. Winslow, executive committee; F. Winthrop Batchelder, secretary and treasurer; Frederick Lyon, assistant managing director; preceding officers, Frederick Ayer, Wm. Barbour, Chas. F. Brooker, Wm. H. Coolidge, Eugene S. Foss, C. A. Hight, N. W. Rice, Galen L. Stone, H. H. Wehrane, Capt. John W. Weeks, Robt. S. Bradley and David A. Ritchie, directors; H. A. Frosser, metallurgical director.

Organized Jan. 10, 1906, under laws of Maine, with capitalization \$75,000,000, shares \$50 par, in \$37,500,000 preferred 7% cumulative shares, and

\$37,500,000 common shares. Has circa 6,000 shareholders. City Trust Co., Boston, transfer agent. National Shawmut Bank, Boston, registrar. Annual meeting, in May.

The company is a securities holding corporation only, controlling, through practically entire stock ownership, the United States Mining Co., United States Smelting Co. and Mammoth Copper Mining Co. The company also controls, through ownership of a large majority of stock, the Centennial-Eureka Mining Co., United States Stores Co. and United States Lime Co., and owns a majority of both preferred and common stock issue of the American Exploration Co. The company secured, latter half of 1908, a controlling interest in the Bullion-Beck & Champion Mining Co., and controls, through practically entire stock ownership, the Compañía Minera Real del Monte y Pachucha, of Mexico, which property was bought for 3,800,000 pesos. Controls, through ownership of 100,000 shares, the Peruvian Mining, Smelting & Refining Co. Owns a half interest in the United States Metals Refining Co., other half being owned by Aron Hirsch & Sohn, of Halberstadt, Germany. The company also owns slightly less than a majority interest in the shares of the Richmond-Eureka Mining Co. The various subsidiary corporations are described separately, under their respective titles. Control of the United States Mining Co. was secured by exchanging stock, three-fourths in preferred and one-fourth in common shares of the United States Smelting, Refining & Mining Co., having been given, share for share, plus \$1 per share cash bonus, for each share of United States Mining Co.

Company pays 7% on preferred stock, in quarterly dividends of 1½%, payable January, April, July and October, first dividend having been paid Apr. 15, 1906. Dividends were begun, 1907, on common stock, and in 1908 the company paid 4 quarterly dividends, of 1% each, on common shares. The company's dividend requirements, for both common and preferred shares, are \$2,400,000 yearly.

The company ended 1907 with an available surplus of \$4,067,087, which was cut down, by adding \$739,285 to reserve, and other dispositions, to a net surplus of \$357,008. The floating debt, estimated at \$8,000,000 during the panic period, late 1907, was considerably reduced, early 1908. Net earnings were \$3,504,522 in 1906, and \$2,386,539 in 1907. Net earnings were said to have been circa \$350,000 in September, and \$385,000 in October, 1908, showing a substantial recovery in business and profits.

Production, 1906, including outputs of all subsidiary corporations, was 38,856,287 lbs. fine copper, 27,828,644 lbs. lead, 4,852,292 oz. silver and 102,537 oz. gold, with a gross value of \$14,747,746. Production for 1907, including outputs of all subsidiary companies, was 38,518,378 lbs. fine copper, 53,617,284 lbs. lead, 6,789,269 oz. silver and 295,822 oz. gold, with a gross value of \$18,408,655, giving net earnings of \$2,386,539, for an exceedingly bad year.

The United States Smelting, Refining & Mining Co. is an ambitious undertaking, and must be considered a serious competitor of the Amalgamated Copper Co., Federal Lead Co. and American Smelting & Refining Co., commonly termed the copper, lead and smelter trusts. The company has properties of great present value, and much greater potential worth. While the company has made mistakes, it invariably has profited by them, and in 10 years has worked from a position decidedly dubious to one where its present is assured, and its future most promising.

#### UNITED VERDE COPPER CO.

#### ARIZONA.

Office: 901-49 Wall St., New York, N. Y. Mine and works office: Jerome, Yavapai Co., Ariz. Employs circa 900 men. Hon. Wm. A. Clark, president; Jas. A. Macdonald, vice-president; H. H. St. Clair, secretary and treasurer; Chas. W. Clark, general manager; Will L. Clark, assistant general

manager; Thos. Taylor, smelter superintendent; C. B. Hopkins, engineer; Otto Strohoff, chief clerk; Geo. Bosch, master mechanic.

Organized Sept. 2, 1899, under laws of West Virginia, as a reconstruction of a company of same title organized under laws of New York, with capitalization \$3,000,000, shares \$10 par; issued \$2,969,270. Is controlled, through ownership of about 90% of total stock issue, by Senator Clark, and is operated practically as a close corporation, having about a dozen shareholders only. Annual meeting, third Monday in February.

Gross earnings, 1907, were \$6,557,918, with operating expenses of \$3,479,072, leaving net earnings of \$3,078,846, company ending year with a surplus of \$5,131,608, including bills and accounts receivable of \$1,508,401, investments in choice bonds and stocks of \$1,314,239, and cash of \$155,800.

Dividend payments were begun, 1892, by old company, on the basis of 25 cents per share monthly, increased, 1896, to 50 cents per share monthly, and again increased, 1898, to \$1 per share monthly, maximum dividends being \$4,498,680 in 1899, in which year the net earnings were \$5,435,970. Recent dividends have been as follows: \$2,025,000 in 1905; \$2,700,000 in 1906; \$2,700,000 in 1907, with total dividend disbursements, to end of 1907, of \$24,405,680.

Lands, 18 claims, patented, area 230 acres, with sundry adjoining property, including the North Venture and South Venture claims, which have produced a little high-grade ore, in the Verde district of the Black Hills range, at an average elevation of 5,600' above sea-level, and about 1,800' above the valley of the Verde river. Property shows porphyritic rocks, slate and schist, the mine, being in a zone of slates and intrusive dioritic rocks, the neighboring limestone being superimposed unconformably, and apparently having no connection with the ore deposits. The United Verde was a small gold and silver mine, discovered 1880, opened 1883, and closed 1885, because unprofitable, until bought, 1888, by Senator Clark, who has developed it into one of the great mines of the world.

The mine is opened on a single monstrous lens of sulphide ore, in slate, of circa 600' extreme width and about 1,900' length, proven to depth of 1,000', the ore body consisting of more or less irregular masses, in a much broken and disturbed area, the lens having a dip of 72° and being intruded by a 70' quartzite dyke that carries about 1% copper, and from 1 to 18 oz. gold per ton, which is used for converter linings. The gossan outcrop, carrying auriferous and argentiferous oxidized ores to depth of circa 160', has been worked out. The zone of secondary enrichment carries mainly chalcocite, with some covellite and other alteration minerals of copper, all highly argentiferous. The base zone carries mainly chalcopyrite, with a little bornite, both auriferous and argentiferous. No ore assortment is attempted, and no concentration is made, everything from the mine going to the furnaces, the average of ore from all openings formerly being circa 6.5% copper and 15 to 32% sulphur, with considerable gold and silver values. The ore, as a whole, is not so rich as formerly.

Underground openings are very extensive, with enormous ore reserves, estimated as high as 20,000,000 tons, which is much too high. The mine is developed to a depth of 1,000', and diamond drill borings show ore to a depth of 2,000', with decreasing values. Production is mainly from the 5th to 8th levels, inclusive. The mine is worked pillar-and-stall, and timbered with square sets, filled with waste, worked-out stopes being filled with culs, and occasionally with barren rock, blasted from the mountainside above the mine, and milled into abandoned stopes, a practice considered somewhat dangerous.

The ore is very heating, owing to its richness in sulphur, and is liable to spontaneous combustion, and, owing to the more or less shattered condition of the lens, it is difficult entirely to prevent the access of air, very little

of which will keep a sulphur fire burning incessantly. The most serious fire, in August, 1902, caused a total suspension of mining, but finally was gotten under control by pumping the mine full of carbonic acid gas, this being made by treating crushed limestone with dilute sulphuric acid, in iron tanks, the gas being forced, by natural pressure, into the top of the shaft, whence it fell, by gravity, to the bottom of the mine, displacing the lighter atmospheric air. In April, 1905, a serious explosion killed 5 men, and for a time threatened the entire mine. The fire had eaten its way to a point below the 700' level, and a cave on this level, caused by the fire, fissured the superincumbent rock-mass so that surface water from the heavy spring rains seeped down into the fire zone, generating steam that blew out the solid masonry bulkheads and endangered the lives of the miners by steam and sulphur fumes—a truly diabolical combination. In fact, the explosion at the United Verde might be termed an artificial volcano, just as the "air-blasts," at the Quincy and other Lake Superior mines, are called artificial earthquakes. The fire on the 400' level has been burning since 1897, and the mine is on fire in various places, from the 7th level to surface, fire in stopes not worked being walled off by cement bulkheads having steel gates. Mining is in progress in the fire zone, on the 300' level, under the Plenum system, introduced by J. J. Shaw. By this method, air under pressure is blown against the face of the stopes, by electric fans. The air feeds the fire, which is a smouldering one, but drives back the deadly fumes into the shattered rock-mass, and permits the extraction of ore. The fire, while dangerous and annoying, cannot destroy the copper, all of which will be recovered, eventually, by mining or leaching.

The mine is subject to bad caves, one of which carried down the office building and killed a number of employees, some years ago. Owing to fires and caves, the shafts sunk in ore were subject to drawing, causing their ultimate abandonment, new shafts being sunk in the country rock. From a miner's standpoint, the United Verde is not an especially desirable working-place, as the openings are very hot, and the acid waters cause blisters and sores upon the unprotected skin, while the mine fires and caving ground render underground work more or less hazardous. Strenuous efforts have been made to render the mine safer, but, owing to its having been opened wrongly at the start, such efforts are made at a disadvantage, but the mining system has been much improved latterly, and the United Verde, while by no means an ideal place for the employment of persons with weak nerves, is much safer than formerly.

Development is by shafts of 500' and 1,000', and by tunnels of 800', 2,640' and 6,593', tunnels having electric haulage. The old main shaft, 6x18' in size and 800' deep, is no longer in use. The new main shaft, with 5 compartments, and 1,000' deep, was located 900' from the old main shaft, to sink continuously in country rock, but cut ore at 600' depth, and has held it to the bottom, considerably extending the known ore limits of the mine. Equipment of the new main shaft includes 4 cages, worked in counterbalance.

The new drainage tunnel, of 6,593' length, was begun Dec. 23, 1906, and completed Sept. 10, 1908, being driven from both ends, in less than 21 months. This tunnel, running from the Verde valley, connects with the workings on the bottom level, at depth of 1,000', and drains the entire mine. The tunnel is 7x9' in the clear, and at the bottom is a 2x2' water conduit. The tunnel has one track, with room for a second, to be added later.

The surface plant and smelter are located on top of the mine, the precipitous walls of the cañon rendering such a location obligatory, when the mine was opened. Equipment includes a steam plant, of about 2,600 h. p., with 2 powerful hoists, and a compound air-compressor of 6,000 cubic feet capacity per minute, having steam cylinders of 28" and 52", with 48" stroke, and air

cylinders of 24" and 44". Electric light and power are furnished by a generator direct-connected to a 350-h. p. engine. Fuel is coke, costing \$12.75 per ton, for the smelter, inferior wood, costing \$8 per cord, for the roast-heaps, and coal and petroleum for steaming purposes. There is a 175,000-gallon tank at the mine and a 500,000-gallon tank at Jerome Junction, for oil storage.

Water is received through 2 miles of 10" pipe, from the Walnut Springs dam, which was rebuilt, 1907. The supply being somewhat scanty, water is husbanded with care.

The precipitation plant, formerly near the smelter, has been removed to the mouth of the drainage tunnel, the new plant consisting of a flume one-half mile long, 5' wide and 10" deep, with a grade of 0.8%, with settling tanks 120' apart, copper being precipitated from the mine water on scrap-iron.

All ore above 12% in copper tenor is sent direct to the smelter, balance being trammed through the tunnel on the 500' level to the roast-yard, where the ore is heap-roasted, with cordwood, on contract, each 500-ton heap requiring 5 to 9 weeks for roasting. After roasting the ore is trammed back into the mine, through the tunnel, and hoisted through the shafts to the smelter, the exceedingly precipitous nature of the ground rendering it impracticable to secure direct connection between the smelter and roast-yard, except through the mine.

The smelter is built on the hanging wall side of the mine, too close to the ore body, and there has been considerable trouble from caving ground. The smelter was practically rebuilt, 1903, while in blast, and another large new furnace was installed, 1907. Equipment includes 5-rectangular water-jacket blast-furnaces, 4 of circa 500 tons daily capacity each, and a fifth furnace, 48x240", of 750 tons capacity, giving the works a nominal capacity of about 2,750 tons daily, but, in practice, one blast-furnace is held in reserve, as a spare. The reverberatory furnace, formerly used for smelting fine-dust and ores exceptionally rich in gold and silver, has been dispensed with, as has a small tilting furnace for casting anodes. The smelter stack has a screen-top, to catch fine-dust, which carries high values in gold and silver. The converter department has 6 stands, 15 shells and two 50-ton traveling cranes. Anodes are shipped for refining mainly to the Waclark Wire Works, at Elizabeth, New Jersey, controlled by Senator Clark, where the gold and silver are parted electrolytically, copper being used mainly for drawing into wire. There have been rumors at intervals that the smelter would be removed, one of these detailing, very circumstantially, the alleged plans of the management to build a new smelter at Farmington, New Mexico, near coal, but, while the smelter may be removed later, it will not go to the fuel, but will remain near the ore, and possibly new works may be built near the mouth of the drainage tunnel, which would seem about the best site available in the near vicinity of the mine.

The United Verde & Pacific Railroad, controlled by the company, is a 28-mile narrow-gauge line connecting the mine with the Santa Fe, Phoenix & Prescott railroad, at Jerome Junction, this line traversing a very difficult country. Consideration has been given, tentatively, to the construction of a railroad from Flagstaff to Jerome.

Underground employees work 8-hour shifts, and such as wish it are furnished rooms for \$5 per week, and table board for \$7 per week, in a fine hotel built by Senator Clark.

Production has been as follows: 43,995,932 lbs. fine copper, which was the largest recorded production, in 1899; 29,275,503 lbs. copper, 668,842 oz. silver and 23,754 oz. gold in 1904; 32,683,051 lbs. copper, 486,041 oz. silver and 15,915 oz. gold in 1905; 38,822,265 lbs. copper, 428,317 oz. silver and 12,913 oz. gold, with a gross value of \$8,038,126, in 1906; 33,015,457 lbs. copper, 396,038

oz. silver and 11,733 oz. gold, valued at \$6,557,918, in 1907; circa 34,000,000 lbs. copper, with corresponding gold and silver values, in 1908.

In earlier years the United Verde made copper for 5 cents per pound, and even a trifle less, after deducting gold and silver values contained, but present costs are much higher. Cost, per pound of finished copper, after deducting gold and silver values, has been as follows in recent years: 9.17 cents per pound in 1904; 9.27 cents per pound in 1905; 8.69 cents in 1906; 10.54 cents in 1907, the costs for 1907 having been abnormal. Under average circumstances, the copper of the United Verde may be figured as costing 9 to 10 cents per pound, with a marked tendency toward increasing costs.

The United Verde, owing to the former policy of the management, now practically abandoned, of withholding all information, has been lied about more industriously than almost any other mine in the world; and it has been stated, repeatedly, that the mine made copper for nothing, the gold and silver values covering all expenses, but this statement never was true, though likely to do service in the press, and in the prospectus of new mining corporations, more anxious for cash than for truth, for many years to come. The United Verde also has been pointed out, repeatedly, as a perfect example of blind luck, but this story is no nearer truth than the others. The United Verde was taken by Senator Clark when it was a thoroughly discredited gold-silver mine, and, by liberal applications of cash and brains, was developed into a magnificent copper mine, consequently, the credit therefor is due to Senator Clark, and not to the goddess of chance. This mine, while it has seen its best days, as a low cost property, is one of the best copper mines of the world, and will be a large and profitable producer for many years to come.

#### UNITED VERDE COPPER EXTENSION CO. ARIZONA.

Mine office: Jerome, Yavapai Co., Ariz. J. J. Fisher, manager. Was a reorganization of the United Verde Extension Mining Co., which came to grief. Lands, 5 claims, adjoining the United Verde, having a 581' shaft, said to show promising ore in bottom. Has steam power.

#### UNITED VERDE EXTENSION MINING CO. ARIZONA.

Dead. N. L. Amster denies ever having been consulting engineer for this company. Formerly at Jerome, Yavapai Co., Ariz. Described Vol VI.

#### UNITED VERDE JUNIOR COPPER CO. ARIZONA.

Dead. Lost charter 1902; lands 1906. Was a stock-jobbing scheme, promoted by Benj. F. Peach and Edwin Wallace. Formerly at Jerome, Yavapai Co., Ariz.

#### UNITED VERDE JUNIOR COPPER MINING CO. ARIZONA.

Dead. Formerly at Jerome, Yavapai Co., Ariz.

#### UNITED VERDE SYNDICATE, LTD. BRITISH COLUMBIA.

Office: care of S. E. Ceperly, Vancouver, B. C. Mine office: Howe Sound, New Westminster district, B. C. Lands, 6 claims, area 240 acres, 40 miles from Howe Sound, on Fitzsimmons Creek, showing large bodies of heavily mineralized schist, carrying 1.5 to 2% copper and \$2.84 gold per ton, with a little silver. Property idle and cannot be operated to advantage until rail connections are secured.

#### UNITY COPPER & GOLD MINING CO. NEW MEXICO.

Dead. Charter forfeited 1902. Formerly at Tres Piedras, Taos Co., N. M.

#### UNITY COPPER MINING CO. WYOMING.

Office: Chicago, Ills. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. Property is the Haskins group, near the Doane mine. Was developing by tunnel, at last accounts.

#### UNITY MINES CORPORATION. UTAH.

Office: 52 Broadway, New York, N. Y. Mine office: Alta, Salt Lake Co., Utah. W. J. Robinson, president; Harry A. Lee, vice-president; D. L. Schwartz,

**THE COPPER HANDBOOK.**

secretary; E. W. Penfield, treasurer; preceding officers, Theo. Cook and Chas. F. Quincy, directors. Organized 1906, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Controls, through stock ownership, the Continental Mines & Smelting Corporation and the Continental Transportation Co.

**UNIVERSAL COPPER MINING CORPORATION, LTD.**

MEXICO.

Office: 31 Lombard St., London, E. C., Eng. F. Richards, secretary. Organized Dec. 21, 1896, under laws of Great Britain, with capitalization £40,000, shares £1 par; issued, £9,476. Property is merely a share interest in the New Ario Copper & Exploration Co., Ltd.

**UNUK RIVER MINING & SMELTING CO.**

ALASKA.

Mine office: Ketchikan, Alaska. J. W. Daly, manager. Has gold and copper ores.

**UPINGTON COPPER SYNDICATE.**

CAPE COLONY.

Office: Brown's Bldg., Johannesburg, Transvaal. Mine office: Reimoza, Cape Colony. A. Dickson, J. Dale lace, E. Brayshaw, J. J. Hoffman, N. Tenhoff and C. E. Campbell, directors; J. G. Davis, secretary. Organized circa June, 1908, under laws of Transvaal, with capitalization £10,000. Lands are an option of the Farm Acoovoerby, on the Orange river, near Reimoza, circa 30 miles southwest of Upington. The option is for £5,000 cash and 16,000 shares, giving a purchase price of 15s. per morgen. The property shows cuprite and malachite, associated with iron, in quartz gangue, ore assaying 20 to 40% copper from a number of shallow test pits.

**SOCIEDAD MINERA UPOLONGOS.**

ARGENTINA.

Dead. Lands sold to Famatina Development Corporation, Ltd. Formerly at Chilecito, Rioja, Argentina. Described Vol. V.

**UREA MINING CO.**

MEXICO.

Dead. Formerly at Velardeña, Cuencamé, Durango, Mex.

**URIQUE DEVELOPMENT CO.**

MEXICO.

Letter returned unclaimed from former mine office, Urique, Arteaga, Chihuahua, Mex. Lands include the Barranca de Gloriapán mine, said to give good smelter assays, and the Santos Reyes mines, said to have a vein of about 18" average width, carrying circa 100 oz. silver per metric ton, with some bonanza ore carrying circa 1,000 oz. silver per metric ton, opened by 2 tunnels, blocking out considerable ore of good copper and silver tenor.

**URUÁCHIC MINING & SMELTING CO.**

MEXICO.

Mine office: Uruáchic, Rayón, Chihuahua, Mex. H. T. Boddington, superintendent. Has auriferous and argentiferous copper ore, with steam power.

**UTAH AMALGAMATED COPPER CO.**

UTAH.

Dead. Was reorganized, 1908, as Utah Gold & Copper Mines Co. Former officers were Dr. C. E. Watkins, president; F. L. Burt, secretary and treasurer; L. G. Grew, superintendent. Capitalization was \$1,000,000, shares \$1 par. Former landed holdings are described under title of Utah Gold & Copper Mines Co. Formerly at Newhouse, Beaver Co., Utah.

**UTAH APEX & HIGHLAND BOY CONSOLIDATED MINING CO.**

UTAH.

Mine office: Bingham Canyon, Salt Lake Co., Utah. Organized Feb. 8, 1904, under laws of Maine. No trace of operations secured, and company almost certainly abortive.

**UTAH-APEX MINING CO.**

UTAH.

Office: 53 Tremont St., Boston, Mass. Operating office: 306 Auerbach Bldg., Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Employs 60 men. E. R. Hastings, president; John W. Horne, treasurer; preceding officers, Henry R. Bradley, Jas. D. Casey, Wm. F. Fitzgerald, John P. Gorman, R. F. Haffenreffer, Jr., Cowley Lambert and Chas. A. Morse, directors; Robt. S. Oliver, general manager; H. L. Parker, superintendent; E. D. Gardner, engineer; Arthur L. Pearse, consulting engineer.

Organized May, 1902, under laws of Maine, as a merger of Copperfield Mining Co. and York Mining Co., with capitalization \$2,500,000, increased, 1906, to \$3,000,000, shares \$5 par. Issued 26,000 shares of new stock, to shareholders, early 1907, and stock outstanding, April, 1907, was \$2,641,000. Has authorized the issue of \$500,000 convertible bonds, at 6%; outstanding, \$180,000, September, 1908. Owns a 50% interest in the Markham Gulch Mining & Milling Co., which has a 150-ton mill. Has absorbed, since organization, the Highland Boy Mining Co., Petro Mining Co. and Minnie Mining Co., and December, 1908, secured, for circa \$100,000, a controlling share interest in the Phoenix Mining Co., property of which adjoins the Utah-Apex. Federal Trust Co., Boston, registrar. Annual meeting, second Tuesday in September.

Lands, 24 claims, area 162 acres, on York Hill, in Carr Fork Cañon, adjoining the Utah Consolidated on the south and west, location being considered good. Property originally was the York and Copperfield groups, to which the Dana, Petro and Highland Boy Consolidated groups were added. The properties, before absorption by the present company, produced circa 300,000 tons of ore, including chalcopyrite and lead carbonates and sulphides. Lands show limestone and quartzite, carrying the Parnell, Petro, York and Andy bedded deposits, 3 of which are more or less developed, these being traversed by 6' fissure veins, of which the Leonard, Louisa, York and Petro have been opened, and proven to carry ore, the Dana fissure, which is the widest, being undeveloped. The property carries ore values mainly in copper, though with good values in lead, silver and gold, ores carrying an excess of iron, giving low smelting charges, because of the premium paid for each excess unit of iron by Utah smelters. First class copper ores carry only about 2% copper and circa \$6 to \$8 per ton combined gold and silver values, while second class copper ores carry about \$3 per ton in combined gold and silver values. First class lead ores carry 35 to 50% lead, with gold and silver values, and second class lead ores range 7 to 14% in lead tenor, with small gold and silver values. In October, 1908, sixteen shipments returned an average of 1.67% copper, 35.89% lead, 8.44 oz. silver and 50 cents gold per ton. The mine shows considerable first class ore, and large quantities of second class ore, and ore reserved were increased largely, during 1908, being estimated, at end of year, at 154,000 tons of silver-lead ore, of \$17 average value per ton.

Development is by 3 shafts and 6 tunnels, with circa 5 miles of workings. The 6 tunnels are known as the Parnell, Minnie, Smilax, Andy, Andy No. 2 and Parvenu, each circa 200' apart vertically, and connected by incline shafts, all on the Parnell vein, which is estimated, by the company, to average 5' in width, and to be mineralized for about 1,000' on its strike and 2,000' on its dip. The tunnels are connected by incline blind shafts, of 200' and 300', equipped with electric hoists. The Andy tunnel opens 8 ore chutes on the Parnell vein. The Parvenu tunnel, which is the principal opening, is circa 3,000' in length, planned to be extended to length of nearly one mile, cutting the Parnell vein with a back of circa 2,200'. The company planned, late 1908, reducing extraction costs by connecting the Parvenu tunnel, on the 700' level, with other workings, by a 3-compartment blind shaft, to be raised 350'.

A 3,000' Bleichert aerial tram runs from the portal of the Andy tunnel to a loading station, whence ore is hauled by team to the Markham mill, circa 1½ miles distant. The company also has planned the construction of a 2,500' railway spur, from the mouth of the Parvenu tunnel to the Copper Belt railroad.

Equipment includes a 15-drill air-compressor and 2 electric hoists, machinery plant not being extensive, owing to extraction of ore mainly through tunnels.

Production, of circa 100 tons of ore daily, during 1907, was discontinued,

Oct. 1, 1907, returns to that date being \$229,419.13, the last 18 shipments of 1907, of circa 25 tons each, giving average returns of about \$18 per ton. Production was resumed, Aug. 15, 1908, with shipments of about 30 tons daily, increased later to 40 or 50 tons daily. Property considered decidedly promising.

#### UTAH-ARIZONA GOLD & COPPER MINING CO.

**ARIZONA**

Office: Salt Lake City, Utah. Mine office: Chloride, Mohave Co., Ariz. Lafayette G. Burton, general manager; W. O. Young, superintendent. Lands include the old Hall mine, 20 miles from Chloride, in the Weaver district. Company is said to have bought machinery for a 10-stamp mill, June, 1908.

#### UTAH-BINGHAM MINING CO.

**UTAH**

Office: 547 Tremont Bldg., Boston, Mass. English office: 6 Moorgate St., London, E. C., Eng. Operating office: D. F. Walker Bldg., Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Employs 25 men. Clarence S. Ward, president; Warren N. Akers, vice-president; Alfred R. Shrigley, secretary; J. E. Meadowcroft, London secretary; preceding officers, Robt. F. Miller and F. J. Minton, directors; M. F. Rowe, assistant treasurer; W. W. Bellows, general manager; P. M. McCrea, superintendent. Organized Feb. 3, 1906, under laws of Maine, with capitalization \$2,000,000, shares \$5 par, increased, Apr. 18, 1908, to \$2,750,000, shares \$5 par; issued, \$2,313,595. Owns 532 shares in the Ilim Mining Co. Federal Trust Co., Boston, registrar.

Lands, 17 claims, patented, area circa 115 acres, near the Telegraph and Old Jordan mines, showing limestone, quartzite and porphyry, carrying fissure veins and irregular ore bodies in limestone, latter striking northeast with average dip of 30°. The property shows 5 known ore bodies, 4 of which are said to carry ore of fair assay tenor, mainly silver-lead, with a little auriferous copper ore, latter expected to occur in considerable quantities at greater depth. The limestone ore body, of irregular outline, circa 200' in extreme width and traceable about 3,000', carries malachite, chalcocite, chalcopyrite and galena, estimated by company to average 2 to 5% copper, 10 to 40% lead, 5 to 16 oz. silver and 80 cents gold per ton.

Development is by a 200' shaft and by tunnels of 250', 360', 420', 600' and 900', with a total workings of about 2 miles, of which about 3,000' are now in use.

Equipment includes a 100-h. p. electric plant, with a 100-h. p. General Electric motor, taking current from the Telluride Power Co. Has a hoist, good for 500' depth, and a 5-drill Ingersoll-Sergeant air-compressor. Buildings, 10 in number, include a 20x40' wooden machine shop, 20x30' smithy, 24x26' office and 16x80' boarding house.

Production, last quarter of 1908, was 100 to 150 tons of ore weekly, sold direct to smelter, secured at estimated average mining cost of \$1 per ton. The property has developed considerable ore bodies, estimated, apparently conservatively, at 100,000 tons, with prospects of much greater tonnage to be opened at depth. Property considered promising.

#### UTAH BUCKHORN MINING CO.

**UTAH**

Dead. Was succeeded, circa January, 1908, by Del Verde Tunnel Co. Formerly at Ogden, Weber Co., Utah.

#### UTAH CONSOLIDATED GOLD MINES, LTD.

**UTAH**

Dead. Reorganized, 1903, as Utah Consolidated Mining Co. Formerly at Bingham Canyon, Salt Lake Co., Utah.

#### UTAH CONSOLIDATED MINING CO.

**UTAH**

Office: 949-42 Broadway, New York, N. Y. Mine office: Bingham Canyon, Salt Lake Co., Utah. Works office: Murray, Salt Lake Co., Utah. Has circa 4,000 shareholders. Urban H. Bronghton, president; Adolph Lewisohn, vice-president; T. L. Hermann, second vice-president; preceding officers, James Phillips, Jr., and C. N. King, directors; F. P. Addicks, secretary and treasurer;

Joseph R. Risque, general manager; W. R. Smith, general superintendent; W. M. Johnson, assistant superintendent; C. L. Morris, smelter superintendent; S. Severin Sorenson, mechanical engineer; E. P. Mathewson, consulting metallurgical engineer.

Organized 1908, under laws of New Jersey, with capitalization \$1,500,000, shares \$5 par, as a reconstruction of Utah Consolidated Gold Mines, Ltd., a British corporation that, in turn, succeeded the Silver Gold Mines, Ltd., October, 1896. Property of the Utah Consolidated Mining Co. is 2,490 shares of the 2,500 shares of the capital stock of the Highland Boy Gold Mining Co., of New Jersey, latter corporation holding direct title to the Utah properties. Shares are listed on the Boston Stock Exchange.

Dividends of the present company, and its predecessor, have been as follows: \$732,000 in 1901; nothing in 1902; \$900,000 in 1903; \$900,000 in 1904; \$1,050,000 in 1905; \$1,500,000 in 1906; \$2,100,000 in 1907; \$600,000 in 1908. Net earnings have been as follows: \$1,066,637 in 1903; \$1,164,348 in 1904; \$1,867,385 in 1905; \$2,835,098 in 1906; \$1,179,412 in 1907.

Lands, 31 claims, patented, area 239 acres, known as the Highland Boy group, in Carr Fork Cañon, circa  $2\frac{1}{2}$  miles from Bingham Cañon. Company also owned a smelter site, in Pine Cañon, Tooele Co., Utah, circa 4 miles across the divide from the mine, but this was sold, late 1908, to International Smelting Co. The company has about 150 acres of mineral land; unexplored previous to 1907, which is to be thoroughly tested; and considerable diamond drilling was done, 1907-1908.

The property has 6 distinct ore bodies, with 3 main ore chutes developed, largest being approximately 320' in extreme width, by 340' in length, and of unknown depth. It was claimed in the press, 1907, that the Highland Boy one body had faulted into the Yampa, but this does not seem proven, though lower ore values are encountered at depth. The ore chutes apparently are leaner in the bottom levels, though carrying good values, and likely to continue workable to great depth. Ores are sulphide, carrying 2 to 13% copper and 42.50 combined gold and silver values per ton, average ones carrying about 30% each of iron, silica and sulphur, rendering them self-fluxing. Extensive underground development was done, 1907-1908, proving much new ore of promise, though the average of ore is lower in grade, since 1906. Some good new ore bodies have been opened toward the west, and considerable lead ore of promise has been developed. During 1907 the mine made nearly 2 miles of new openings, and caved stopes were reopened, 1908. Ore reserves, 1907, were estimated at 1,902,980 tons.

The Highland Boy mine is opened by a 900' shaft and 7 tunnels, of 1,000' to 2,500' length, extraction being almost entirely through No. 7, the lowest tunnel, which is 700' below the crest of the mountain. All tunnels are connected, and ore is milled down to the bottom tunnel for removal. There are 2 large electric hoists on the 700' level, ore from the bottom workings being raised through blind shafts to the level of the lowest tunnel. The ore breaks easily, and in good sized bodies, extraction being by the top slice cutting system, with square-set timbering; expense for latter being heavy, with cables used for underground filling; and ore is broken mainly by contract. The mine has upwards of 15 miles of workings, with electric traction in No. 7, the lowest and main working tunnel.

A 12,700' aerial tram leads from the portal of No. 7 tunnel to ore bins on the Rio Grande Western railway. There is a subsidiary aerial tram, crossing Carr Fork Cañon, used for handling timber and mining supplies.

The smelter, at Murray, 17 miles north of the mine, and 10 miles south of Salt Lake City, is of circa 800 tons daily capacity, equipment including 10 McDougall calciners, 8 Wethey calciners and 9 reverberatory furnaces; 8 of the

latter being 17x48' 6" in size. A 27x56x18' dust-chamber has a steel hopper-bottom, and the works have a 190' stack, 5' 6" in diameter. The smelter includes a converter department. The smelter power plant has a 450-h. p. Nordberg tandem-compound steam engine, and a 250-kw. Westinghouse electric generator. The smelter did good service, giving very clean slags, and produced blister copper of 99% copper tenor, with very low smelting costs, but was blown out, January, 1908, owing to trouble with the agricultural interests in the Salt Lake Valley, a court decree enjoining the company from smelting ores carrying in excess of 10% sulphur, and from sending out arsenical fumes. The farmers of the valley demanded \$300,000 for permission to allow the smelter to run, but finally came down to a demand for \$125,000, providing the company would restrict production to 700 tons daily, which offer was refused peremptorily, and the smelter was blown out, January, 1908.

On suspension of smelting at the company's own plant, a 12-month contract was made with the Garfield smelter, February, 1908, which contract was extended, for 18 months, from Sept. 24, 1908. Smelting at the Garfield plant has been marked by much friction between the Utah Consolidated and the American Smelting & Refining Co., the contention of the former being that costs are greater by about 2 to 2½ cents per pound of finished copper, at Garfield, than they were at the company's own smelter.

The company planned, tentatively, a \$1,250,000 smelter in the Pine Cañon district of Tooele county, Utah, 4 miles from the mine, which would have necessitated a tunnel through or a costly aerial tram over the mountain between, or very possibly a combination of tunnel and aerial trams. In November, 1908, the company made a smelting contract with W. D. Thornton, of Butte, Montana, which was assigned by him to the newly-organized International Smelting Co. This contract, for 10 years, provides for treating up to 1,900 tons daily of Utah Consolidated ore, on terms materially more favorable than were given by the Garfield Smelting Co., the contract also providing for the sale, by the Utah Consolidated to the new smelting company, of the smelter site in Pine Cañon, and extensive smoke easements secured in connection therewith. The contract calls for beginning of smelting April, 1910. It will be necessary for the Utah Consolidated to construct, meantime, a transportation system between its mines and the smelter, unless the International company should see fit to provide such a system, with a view to securing other business also from the Bingham camp.

Production has been as follows: 292,700 tons ore, yielding 13,553,483 lbs. fine copper, in 1904; 287,148 tons ore, yielding 17,264,474 lbs. copper, 374,685 oz. silver and 28,290 oz. gold, giving an average extraction of 3% copper, 1.3 oz. silver and 0.1 oz. gold per ton, in 1905; 18,533,974 lbs. copper, 457,812 oz. silver and 42,001 oz. gold in 1906; 279,642 tons ore, yielding 18,987,557 lbs. copper, 390,296 oz. silver and 34,554 oz. gold, giving average returns of 50.87 lbs. copper and 1.4 oz. silver per ton, in 1907. At end of 1908 mine was shipping circa 800 tons of ore daily, to the Garfield smelter, said to average 2.65% copper, with reduced gold and silver values.

Ores smelted averaged returns of 57.9 lbs. copper, 1.1 oz. silver and \$2 gold per ton, with a copper cost of circa 5 cents per lb., in 1904; 60.3 lbs. copper, 1.8 oz. silver and \$1.98 gold per ton, with net costs of copper 7.6 cents per lb., in 1905; 62.4 lbs. copper, 1.6 oz. silver and \$2.87 gold per ton, with net costs for copper of 4.8 cents per lb., in 1906, this being the lowest priced copper made by any large mine in the world, but apparently this low cost was made by drawing unduly on rich reserves; 50.87 lbs. copper per ton, with net costs of 7.45 cents per lb., in 1907. In 1908 costs for smelting are said to have been about 2 cents per lb. above former figures, due partly to increased cost of transportation, but largely to increased smelting charges at the Garfield

smelter. The Utah Consolidated is a very fine mine, with a good management, and should be capable of increased production, though it is probable that the low costs of 1906 never will be repeated.

#### UTAH CONSOLIDATED MINING & MILLING CO. UTAH.

Office: care of John Y. Smith, secretary and treasurer, Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. Thos. R. Gintler, president; Hon. Reed Smart, vice-president; preceding officers, A. N. Holdway and Hugh J. Cannon, directors. Organized under laws of Utah, with capitalization \$250,000, shares 25 cents par. Lands, 4 claims, near the Sioux Consolidated, with development planned by tunnel.

#### UTAH COPPER CO. CALIFORNIA

Mine office: Lone Pine, Inyo Co., Cal. Samuel McRoberts, superintendent. Organized 1907, under laws of Maine.

#### UTAH COPPER CO. UTAH.

Office: 604 McCornick Bldg., Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Works office: Garfield, Salt Lake Co., Utah. Employs circa 900 men. Chas. M. MacNeill, president; Daniel C. Jackling, vice-president, general manager and chairman executive committee; Spencer Penrose, secretary and treasurer; John Hays Hammond, managing director; Pope Yeatman, associate managing director; A. Chester Beatty, consulting engineer; F. A. Gillespie, assistant secretary and treasurer; preceding officers, Wm. B. Thompson, Col. Chas. Hayden, J. D. Hawkins, Silas W. Eccles and Kenneth K. McLaren, directors; Robert C. Gemmell, general superintendent; J. D. Shilling, mine superintendent; John McDonald, assistant mine superintendent; Frank G. Janney, mill superintendent; Geo. F. Waddell, assistant mill superintendent; William Spencer, mining engineer; G. O. Bradley, mechanical engineer; John M. Hayes, cashier.

Organized June, 1903, and reorganized Apr. 30, 1904, under laws of New Jersey, with capitalization \$4,500,000, shares \$10 par, increased, October, 1905, to \$6,000,000, and again increased, January, 1908, to \$7,500,000, shares \$10 par; issued, \$7,347,500. Retired, 1906, outstanding balance of original bond issue of \$750,000, at 7%, paying a premium of 5% therefor. Bonds, authorized, \$3,000,000, in denominations of \$1,000, at 6%, convertible into stock at \$20 per share, at option of holder, prior to Jan. 11, 1911; outstanding, Dec. 31, 1907, \$2,964,000. Dividends, quarterly, of 50 cents each, were paid Sept. 30 and Dec. 30, 1908, amounting to \$666,824. Controls, through stock ownership, the Bingham & Garfield Railway Co., organized July, 1908, under laws of Utah, with capitalization \$1,000,000, shares \$100 par. A large share interest in the Utah Copper Co. is held by American Smelters Securities Co. Shares are listed on the Boston and Paris Stock Exchanges. Morton Trust Co., New York, registrar. Annual meeting, fourth Friday in January.

Lands, 18 claims, area 200 acres, with circa 8,000 acres in mill and smelter sites, also sundry surface rights, for dumping waste. In 1908 the company bought surface rights to 29 acres, for \$17,500, from the Little Eddy and Puritan companies, and surface rights to 80 acres, for \$15,000, from Bingham Amalgamated company, for railroad right of way, waste tracks and dumping room. Mineral lands, bought of De Lamar-Wall Mining & Milling Co., lie on both sides of Bingham cañon, permitting ore extraction by tunnel, to great depth.

Lands show porphyry and quartzite, country rock being monzonite, an altered, decomposed, friable porphyry, that breaks easily, yet stands well, ore being mainly chalcocite, with some chalcopyrite, quite evenly disseminated throughout the porphyry, with occasional veinlets carrying high-grade chalcocite and bornite. The porphyry ore runs 0.75 to 2.75% in copper tenor, and the average of assays of 6,000 samples, 1906, was 1.98% copper, 0.15 oz. silver and

0.16 oz. gold per ton, which was practically identical with the average assays of ore milled to that date. The monzonite ore body has been proven by extensive diamond drill borings, conducted on surface and from the main tunnel to depth of 500', proving a continuance of the ore body for a thickness of 200' to 600' with an estimated average depth of 510' of workable ore. The capping, of leached country rock, carrying unworkable copper values, ranges 50' to 65' in depth, with ore of workable tenor underneath for 300' to 600' depth, succeeded by monzonite too low in copper tenor to be workable.

The mine, while having a single ore body, is being developed both underground and open-cast, but is essentially a quarrying proposition, like the Rio Tinto and Gyanby. The underground mine, operated by the stop slice caving system, eventually will be broken into open pits, and the entire mine worked open-cast. The mine openings are rectangular, laid out like the streets of a city, with blocks above blocks, like the successive floors of a building. There are 13 tunnels, entering the hills at approximately right angles to the gulch. These tunnels are avenues, and, crossing the avenues, at right angles, parallel with the gulch, are streets, these being opened 150' apart. Paralleling the tunnels, or avenues, are drifts, corresponding to city alleys, these being 75' on either side of the avenues. The tunnels are 10x10', or larger, and all openings are of exceptionally large dimensions, connections between the various floors being secured by uprises from alley to alley. Stop levels are opened at intervals of 17' and 25'. The avenues, streets and alleys are named on the same system as is used in the street nomenclature of Salt Lake City, and the underground mine, as a whole, has nearly 20 miles of openings, under about 40 acres of ground. Timbering costs are said to be less than 2 cents per ton of ore mined, and the mine has, blocked out, above the main tunnel level, about 25,000,000 tons of ore. The main working tunnel has a double tram-track, laid with 30-lb. rails, with an electric haulage system.

The open-cast workings are planned on a truly colossal scale, in magnitude comparable only with the greatest iron mines on the Mesaba Range of Lake Superior. Removal of both overburden and ore is by steam-shovels, and stripping was begun with steam-shovels, August, 1906, the capping ranging 50' to 65' in depth. For the third quarter of 1908, stripping averaged 87,000 cu. yds. of capping monthly, or at the rate of about 10 acres yearly, each acre being estimated to carry about 1,000,000 tons of payable ore. The ground must be blasted before removal by steam-shovel, and the method of mining followed provides for removal of ore in 60' benches, in sections 40' thick and 1,000' long, each section carrying circa 180,000 tons of ore, requiring, for blasting, about 25 tons of dynamite, ground being broken at a cost of about 1½ cents per ton. A single blast has torn down 15,000 tons of ore. Mining equipment, for open-cast operations, includes 7 Vulcan and Marion steam-shovels, of 70- to 90-ton weight each, 3 being employed in stripping and 4 for removal of ore.

For removal of ore and deposition of overburden, the company has 10 miles of standard gauge tracks, laid with 65-lb. steel rails, equipment including 5 locomotives, and 125 dump-cars of 6 cu. yds. capacity each. The waste-rock from the capping is loaded on cars, and dumped down the cañon, on lands bought for the purpose.

At the end of 1908 the company estimated that there had been developed, on a 72-acre tract, an average of 1,000,000 tons of ore per acre, at an average depth of 310', giving 72,000,000 tons of ore proven, sufficient for nearly 30 years production, on the basis of 2,500,000 tons of ore extraction yearly. The principal disadvantage of steam-shovel work lies in the mine being on both sides of a precipitous gulch, which causes the steam-shovel employed on stripping to run speedily into ore, the cuts being unpleasantly short, owing to the sharp pitch. This disadvantage is overcome, partially, by switchbacks, and in case

of serious trouble there are alternative methods available for the removal of overburden and ore, these including the construction of a cog-line railway, to the top of the ore body, to give access to the upper portion.

Mining equipment includes a steam plant, with air-compressors and power drills, but, owing to ore extraction being mainly open-cast, and underground ore being secured through tunnels, the mining plant is smaller than may be found at many properties having a tithe of the productive capacity of the Utah Copper Co.

The company has had very poor service from the Rio Grande Western railroad, which, holding the entire Bingham camp at its mercy, is inclined to be somewhat dictatorial and dilatory. For this reason, the Utah Copper Co. secured a charter, 1908, for the Bingham & Garfield Railway Co., and plans the construction of a 20-mile railway line, from Bingham Canyon to Garfield, at an estimated cost of about \$1,000,000.

The company has 2 mills, the first being near the mine, and the second, which is one of the greatest in the world, at Garfield Beach, 19 miles distant.

The old mill, remodeled 1908, of circa 900 tons daily capacity, was so planned that it could be increased, by units, to circa 6,000 tons ultimate capacity, but the development at the mine rendering it probable that this capacity would be insufficient, a more extensive millsite was secured, on Great Salt Lake. The old concentrator, at Copperton, 1½ miles below Bingham, receives ore over a spur of the Bingham branch of the Rio Grande Western railway, the railroad track entering the mill over a trestle, ore being dumped into bins beneath the track. The building is 193x927' in size, of wood, sheathed with iron. Equipment includes 2 Gates centrifugal crushers, 4 sets of rolls, 6 Hartz jigs, 4 Wilfley tables, 2 Overstrom tables, 2 Card tables, 52 elime tables, 24 Chilean mills, 18 six-foot Flott vanners, 6 hydraulic classifiers, and 11 revolving screens. The crushing department, 26x44' in size, has two 1,200-ton Gates crushers, and 2 sets of 36" and 30" Gates rolls. Ore is drawn from the bins, through chutes, to a 200' belt-conveyor that carries ore to the crushers. The boiler-house, 86x100', has eight 75-h. p. boilers, with automatic stokers, and 125-h. p., 150-h. p., and 350-h. p. engines.

The new mill is located on a 3,000-acre site, 4 miles east of the Garfield smelter and one mile east of the works of the Boston Consolidated, reached by an 8-mile branch of the Rio Grande Western railway. The mill is of steel frame, on concrete foundations, with reinforced concrete floors, iron siding, and composition roofing. The mill is in two 3,000-ton units of 6 sections each, giving a capacity of 600 tons daily to each section. Each unit is 890x505' in size; the two units, with their auxiliary buildings and yards, occupying about 20 acres, and the plant is so designed that two additional units can be constructed, whenever desired, giving the mill a daily capacity of 12,000 tons. Milling was begun June, 1907, with 2 sections, and the 12th and final section of the mill was started circa November, 1908.

The ore-bins are of 30,000 tons capacity, there being bins of 23,000 tons capacity in the coarse-crushing department, and of 7,000 tons capacity in the fine-crushing department.

Equipment of each section of the mill consists of 2 No. 7½ Gates crushers, 2 sets of 20x34" rolls, of special design; 12 sets of 16x36" rolls, of special design; 18 six-foot Chilean mills, of special design; 36 jigs, of special design; 24 No. 5 Wilfley tables, and 52 six-foot suspended vanners, of special type.

The 13,000-h. p. power plant, circa 2,000' from the mill, has two 26x54x48" Allis-Chalmers Corliss cross-compound condensing engines, direct-connected to two 1,500-kw. alternating current generators, and three 32x70x48" Nordberg-Corliss cross-compound condensing engines, direct-connected to three 2,500-kw. alternating current generators. The boiler plant has twenty 600-h. p.

Heine water-tube boilers, working under 175 lbs. steam pressure, equipped with stokers having separate mechanical drives, of special design.

The machine-shop, 50x106', of steel frame and brick walls, on concrete foundations, is thoroughly equipped for general repair work.

Water formerly was taken from the Garfield Water Co., but a sufficient supply has been developed on the company's own lands. The pumping plant, of 10,500 gallons capacity per minute, has one 12" two-stage turbine pump, direct-connected to a 250-h. p. General Electric induction motor, with capacity of 2,500 gallons per minute; one 18" two-stage turbine pump, direct-connected to a 350-h. p. General Electric induction motor, with capacity of 3,500 gallons per minute, and one 15" two-stage turbine pump, direct-connected to a 450-h. p. General Electric induction motor, with capacity of 4,500 gallons per minute. These pumps force water, from a pond, through 2,000' of 24" pipe, against a head of 230' to a 5,500,000-gallon concrete reservoir. There also is an auxiliary pumping plant, forcing water to a 500,000-gallon high-service concrete reservoir, 100' above the main reservoir, this having 2 Worthington 8" single-stage pumps, direct-connected to induction motors, with combined capacity of 1,500 gallons per minute.

The nature of the ore, which is mainly very finely disseminated chalcocite, necessitates fine crushing, which causes considerable sliming. The ore concentrates easily, but losses in tailings are heavy, having been, 1906, at the old mill, 0.50 to 0.75% copper, and, 1908, the mills treated ore partially oxidized, which did not give very clean extraction, but the mills should be better on ores mined from greater depth. The new mill was expected to put 18 to 22 tons of ore into one, giving concentrates averaging 26 to 30% copper and \$6 to \$10 combined gold and silver values per ton. For the first eleven days of August, 1907, the ore treated was said to have averaged 1.91% copper, by assay, with an extraction of 1.36%, or 27.2 lbs. fine copper per ton, with losses of 0.55% copper in tailings, giving a recovery of 71%. In May, 1908, the mill was putting about 23 into one, with a recovery of only about 67% of assay values, and in July, 1908, the mill was said to be making an average recovery of 23 lbs. fine copper per ton. The management hopes, eventually, to increase the extraction to 80% of assay values, but it seems doubtful if this can be done, with ore that slimes so readily, with such high concentration.

Production was 4,898,906 lbs. fine copper for calendar year 1906, and was 33,118,409 lbs. fine copper for year ending June 30, 1908. Production, 1908, was 6,527,939 lbs. for the first quarter, 11,568,390 lbs. for the second quarter, and 12,900,095 lbs. for the third quarter, with a total production of 42,689,875 lbs. fine copper for the year. These figures render it obvious that the mine has a productive capacity of about 50,000,000 lbs. fine copper yearly, with its present milling capacity of 7,000 tons per diem.

Costs were said, for August, 1907, to have been about 45 cents per ton for actual mining, or, with general administrative costs, taxes, etc., 68 cents per ton for mining. President MacNeill stated, early 1908, that mining costs, by steam-shovel, were about 25 cents per ton only. For the second quarter of 1908 net earnings were \$493,694, on a production of 11,568,390 lbs. fine copper, made at an estimated average cost of 8.16 cents per lb. fine copper. For the third quarter of 1908, net earnings were \$501,391.60, with copper made at an estimated average cost of 8.76 cents per lb. These figures would indicate the ability of the company to make copper for an average cost under 10 cents per lb., and perhaps for 9 cents per lb., but the estimated average cost of 7 cents per lb. is not likely to be reached. Former estimated costs of \$1.75 to \$1.85 per ton of raw ore treated, apparently should be increased to \$2 to \$2.25 per ton, to allow a reasonable margin for safety, and, with an average recovery of 23 lbs. fine copper per ton of ore treated, cost of finished copper would be 8.7 cents per lb.

on the basis of \$2 cost per ton, or 9.8 cents per lb. on the basis of cost of \$2.25 per ton of ore. It is obvious, however, that while the Utah Copper Co. has not reached the extreme low cost predicted by its management, and merely seems likely to do so, it has fully demonstrated its ability to make copper, at the rate of 50,000,000 lbs. per annum, at a cost safely within 10 cents per lb., and is making copper, beyond question, at a somewhat lower average cost than the average of costs of the ten largest copper producers of the world, of which the Utah now is one. The ore reserves of the mine are as nearly inexhaustible as those of any mine of any metal.

The Utah Copper Co. has been well managed, and the original owners, connected with the United States Reduction & Refining Co., are regarded with much favor, as thoroughly experienced and capable mining men, but the property has suffered somewhat, in the eyes of conservative investors, through the acquisition of a heavy share interest, said, in some quarters, to constitute a control, by the Guggenheims, and suspicions of the possible future of the property, if under Guggenheim control, were aggravated by newspaper talk of merging this property with other Guggenheim interests, at Ely, Nevada, which merger would not be to the best interests of the shareholders of the Utah Copper Co. Thomas W. Lawson apparently was "sold a 'call' on a large block of stock of the Utah Copper Co., in 1908, and endeavored—at least ostensibly—to boost the shares, whereupon they immediately sold lower, this being the usual effect of Lawson's endorsement of a mining property. The management is entitled to commendation for giving quarterly reports that furnish valuable detailed information, and apprise shareholders of the manner in which their interests are being conserved,

#### UTAH DEVELOPMENT CO.

#### UTAH

Dead. Was succeeded, circa September, 1908, by North Utah Mining Co. Formerly at Bingham Canyon, Salt Lake Co., Utah. Fully described Vol. VII.

#### UTAH & EASTERN COPPER CO.

#### UTAH

Office: 127 Church St., New Haven, Conn. Operating office: Herald Bldg., Salt Lake City, Utah. Mine office: Dixie, Washington Co., Utah. Works office: Shem, Washington Co., Utah. Louis E. Stoddard, president; Chas. E. Graham, vice-president; T. W. Farnam, secretary and treasurer; preceding officers, E. G. Stoddard, W. D. Bushnell and Fredk. F. Brewster, directors; Chas. H. Doolittle, general manager. Organized Feb. 7, 1901, under laws of West Virginia with capitalization \$1,500,000, increased later to \$3,500,000, shares \$5 par, in \$2,000,000 preferred and \$1,500,000 common stock.

Lands, 11 claims, patented, area 220 acres, and a 46-acre smelter site, mining lands, including the old Dixie mine, in the Tutsagubet or Cave Springs district, near Green River. Property shows 5 ore bodies, in limestone, one, of 40' estimated average width, carrying cuprite, azurite and massive malachite, giving average assays of 15% copper. Principal development was by a 775' blind shaft, sunk from the breast of a 225' tunnel, but the shaft caved, June 1, 1903, and it was necessary to run a new tunnel, of 800', to reopen the mine. Old workings were said to show about 100,000 tons of ore. The mine uses gasoline power.

The old 25-ton smelter, antiquated and poorly located, is idle. The new smelter, at Shem, has a 100-h. p. water-jacket blast furnace, with water power, secured from the Santa Clara river, three miles distant, and an auxiliary steam plant. The smelter is about 50 miles from Arcoa, on the Rio Grande Western railway, the nearest shipping point, and transportation for 14 miles of this distance, with a down-grade haul, is by traction engine.

Production has been as follows: 1,448,597 lbs. fine copper in 1904; 400,166 lbs. in 1905; 391,779 lbs. in 1907. The property was closed down, October, 1907, owing to depression in the metal market. Notwithstanding lack of rail

connections, which is a very serious handicap, property is considered valuable, and management good.

#### UTAH-EMERALDA COPPER MINING CO.

NEVADA.

Office: Provo, Utah. Letter returned unclaimed from former mine office, Fitting, Humboldt Co., Nev. W. M. Boy, president; J. T. Hammond, vice-president; L. A. Croft, secretary and treasurer; preceding officers, L. M. Stole, J. B. Jensen, W. H. Ray and S. H. King, directors; Wm. M. Roylee, general manager; John F. Westphal, superintendent. Organized 1907, under laws of Utah, with capitalization \$1,000,000, shares \$1 par. Lands, 42 claims, in the Walker Lake district, opened by tunnel, said to show a 16' vein with a 4' paystreak carrying caprite and native copper. A carload shipment of ore was said to assay 8% copper, 40 oz. silver and \$8 gold per ton. Idle.

#### UTAH EXTENSION COPPER MINING CO.

UTAH.

Dead. Was merged, 1908, in North Utah Mining Co., of Bingham. Organized Nov. 15, 1906, under laws of Maine, with capitalization \$750,000. Officers were L. L. Height, president; E. W. Cuptill, treasurer; I. W. Dyer, clerk. Formerly at Bingham Canyon, Salt Lake Co., Utah.

#### UTAH GOLD & COPPER MINES CO.

UTAH.

Mine office: Newhouse, Beaver Co., Utah. Dr. C. E. Watkins, general manager; John T. Breckon, superintendent. Capitalization \$1,000,000, shares \$1 par.

Lands, 30 claims, in 5 groups, south of Newhouse, in the Washington district of the Needle Range Mountains, also 160 acres at State Line, Iron Co., Utah. The Beaver County lands include the Blue Bell group, having pits and shafts, deepest 50', showing ore, with development mainly by tunnel, showing silver-lead ore assaying up to 17% lead and 14 oz. silver per ton, and copper ore assaying up to 9% in tenor.

#### UTAH GOLD MOUNTAIN MINING CO.

COLORADO & UTAH.

Mine office: Marysville, Piute Co., Utah. Letter returned unclaimed from former mine office, Telluride, San Miguel Co., Colo. Organized October, 1906, under laws of Utah, with capitalization \$4,500,000, shares \$1 par, as a merger of, the Log Cabin Gold & Copper Co., Ltd., and the Gold Development Co. Lands, 67 claims, area 1,300 acres, 12 miles west of Marysville, in the Mount Baldy district, said to have 3 tunnels, with circa 3,000' of workings, showing a wide vein said to give ore of good average assay value. Is said to have an air-compressor.

#### UTAH IDEAL MINING CO.

UTAH.

Letter returned unclaimed from former office, Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Wm. H. Flower, president; Wm. Rees, secretary and treasurer. Organized March, 1908, under laws of Utah, with capitalization \$30,000, shares 10 cents par. Lands, 7 claims, in Big Cottonwood cañon.

#### UTAH INDIAN PEAK MINING CO.

UTAH.

Office: care of Peter Porter, secretary and treasurer, Salt Lake City, Utah. Mine office: Lund, Iron Co., Utah. E. G. Rowe, president. Organized 1907, with capitalization \$500,000, shares \$1 par. Lands are in the Needle Range Mountains, 8 miles west of Lund.

#### UTAH MIDLAND COPPER MINING CO.

UTAH.

Mine office: Basin, Grand Co., Utah. Julius V. Brand, manager. Is said to have ore carrying 2 to 30% copper, and \$6 to \$50 per ton combined gold and silver values. Presumably idle.

#### UTAH MINING CO.

MEXICO.

Mine office: Temósáchic, Guerrero, Chihuahua, Mex. J. C. Warrel, superintendent. Organized under laws of Arizona, with capitalization \$3,000,000.

Lands, adjoining the Tres Amigos mine, are said to carry an 80' vein, opened by a 100' tunnel showing copper ore.

#### UTAH MINING, MILLING & TRANSPORTATION CO.

UTAH.

Office: Frisco, Beaver Co., Utah. C. P. Fritchard, general manager. Lands include the Hub mine, adjoining the Burning Moscow, in the Star district. Property has a vein of 2' to 5' width, carrying argentiferous lead and copper ores, developed by a permanent working shaft of circa 200' depth.

#### UTAH & MONTANA COPPER MINING CO.

MONTANA.

Mine office: Phillipsburg, Granite Co., Mont. Mine is said to have produced, under a former management, considerable low grade ore, from surface workings.

#### UTAH-NEVADA COPPER CO.

UTAH.

Office: 801 Equitable Bldg., Denver, Colo. Mine office: Elgin, Grand Co., Utah. John P. Brockway, president; Dr. W. F. Temple, vice-president; Wm. M. Ingersoll, secretary and treasurer; E. P. Wolverton, general manager; preceding officers and N. T. Plummer, directors. Organized Jan. 9, 1906, under laws of Arizona, with capitalization \$1,250,000, shares \$1 par. International Trust Co., Denver, registrar.

Lands, 45 claims, area 900 acres, also seven 5-acre millsites, in the Keg Springs district of Emery county, Utah, and 1,220 acres of hydrocarbon deposits, in eastern end of Wayne county, Utah, giving total holdings of 2,215 acres. The Keg Springs lands show sundry fissure veins and contact deposits between limestone and porphyry, carrying melaconite and chalcocite, assaying up to 70% copper, 30 to 50 oz. silver and \$5 to \$15 gold per ton. Development is exclusively by open-cuts, company estimating that 200,000 tons of second-grade ore, worth \$50 to \$70 per ton, is exposed thereby, which is a serious overestimate. Mill tests of second-grade ore gave concentration of 6 into 1, ore treated being said to assay 18.8% copper, 4 oz. silver and 2 oz. gold, which would give concentrates of the exceptional richness of 112.8% copper, in addition to gold and silver values, unless a considerable portion of the copper were lost, which probably was the case. Ores of such grade do not require concentration.

Owing to serious dissensions, and complaints about the handling of the company's affairs, the management was taken away from Wm. F. Kendrick and associates, after work had been suspended for some time because the latter furnished no funds. Property considered promising, but management is not regarded favorably. Idle and apparently moribund.

#### UTAH-NEVADA DEVELOPMENT CO.

NEVADA.

Office: 829 D. F. Walker Bldg., Salt Lake City, Utah. Mine office: Black Horse, White Pine Co., Nev.

#### UTAH-NEVADA DEVELOPMENT CO.

UTAH.

Mine office: Robinson, Juab Co., Utah. Leslie L. Savage, manager. Has a 100-ton concentrator, completed late 1908.

#### UTAH-NEVADA GOLD & COPPER MINING CO.

UTAH.

Office: care of David Jensen, vice-president, Ogden, Utah. Mine office: Promontory, Box Elder Co., Utah. J. Stanley Dee, president; W. D. Pyper, treasurer; I. C. Dallimore, secretary. Organized 1903, with capitalization \$500,000, shares \$1 par. Lands, 6 claims, in the Newfoundland district of Box Elder and Weber counties, Utah, having sundry open-cuts and shafts of 50' and 70', showing 2 veins of 3' to 5' width, carrying chalcopyrite and pyrite and quartz gangue, assaying up to 32% copper, 17 oz. silver and \$12 gold per ton. Presumably idle.

#### UTAH & NEW YORK GOLD & COPPER MINING & MILLING CO.

UTAH.

Office: care of G. D. B. Turner, secretary and treasurer, Salt Lake City, Utah. Mine office: Milford, Beaver Co., Utah. J. E. Galigher, president;

A. F. Schneider, vice-president. Lands include the Blue Bird group, near the Hickory mine of the Majestic, having a 225' main shaft.

**UTAH SMELTING CO.** UTAH

Dead. Was succeeded, 1908, by Independent Smelting Co. Formerly at Bonneville, Box Elder Co., Utah. Described Vol. VII

**UTAH UNITED COPPER CO.** UTAH

Office: 222 D. F. Walker Bldg., Salt Lake City, Utah. Mine office: Milford, Beaver Co., Utah. Employs 4 men. John T. Treasure, president; A. J. McMullen, vice-president and general manager; Chas. A. Weaver, secretary; A. D. McMullen, treasurer; D. P. Rohlfing, engineer. Organized Sept. 1, 1908, under laws of Utah, with capitalization \$600,000, shares \$1 par, as a merger of Wasatch Mining & Milling Co., and Skylark Copper Mining & Milling Co. Annual meeting, second Tuesday in October.

Lands, 12 claims, 2 patented, area 240 acres, also a 10-acre millsite, in the Beaver Lake district, showing fissures and contact veins, in and between limestone and granite porphyry, there being 3 ore bodies, estimated by company to range 20' to 100', 50' to 200' and 50' to 300' in width, of which one, traceable 6,300', is opened by shafts of 30', 100', 150', 310' and 415', and by 4 tunnels, longest 350', estimated to show 50,000 tons of ore blocked out for stoping. Ore is oxidized to depth of 170', and sulphide below. Ores are claimed to average 6.2% copper, up to 60% lead, 6 oz. silver and \$15.40 gold per ton. Company plans continuous development.

**UTAH YERINGTON MINING CO.** NEVADA

Office: Provo, Utah. Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. John Roundy, president; Joa. Wirthlin, vice-president; Heber C. Jex, secretary and treasurer; preceding officers, Heber C. Harris and Jack Cockrell, directors. Organized 1907, under laws of Utah, with capitalization \$100,000, shares 10 cents par. Lands, 5 claims.

**UTE COPPER CO.** UTAH

Office: Salt Lake City, Utah. Mine office: Bingham Canyon, Salt Lake Co., Utah. Thos. Weir, president; John Weir, Jr., vice-president; J. M. Burt, secretary and treasurer; preceding officers, Henry Catrow and N. J. Catrow, directors. Organized 1907, under laws of Utah, with capitalization \$3,000,000, shares \$5 par. Lands, circa 225 acres, patented, including the old Winnemucca mine, which was an important silver lead producer in early days. Property is opened by the 900' Weir tunnel, and is said to be developing through the tunnel of the Bingham-Butte Mining Co. Has an air-compressor.

**UTOPIA & BISBEE DEVELOPMENT CO.** ARIZONA

Office: Utica, N. Y. Letter returned unclaimed from former mine office, Bisbee, Cochise Co., Ariz. Organized circa 1906, to take over the Erickson group, in Tombstone Cañon, northwest of Bisbee. Presumably idle.

**UTICA MINING & MILLING CO.** COLORADO

Office: 1420 Chestnut St., Philadelphia, Pa. Mine office: Ward, Boulder Co., Colo. Ores carry gold, silver, and copper. Has water power and a 20-stamp mill. Presumably idle.

**UTOPIA MINING & MILLING CO.** WYOMING

Mine office: Centennial, Albany Co., Wyo. Development is by a tunnel, said to show a 12' vein carrying ore giving high assay values in gold, with fair silver and copper values.

**COMPANIA MINERA DE LAS VAGAS LOS VILLOS.** CHILE

Office: Valparaiso, Chile. Mine office: Petorca, Aconcagua, Chile. Organized Aug. 6, 1905, under laws of Chile, with capitalization 400,000 pesos, shares 10 pesos par.

SPAIN.

**HOERNOS Y MINAS DE PEÑAFLOR.**

Office: Glorieta, 1, Valencia, Spain. Mine office: Peñaflor, Sevilla, Spain, Don Baldomero Deu, president and agent. Capitalization, 1,500,000 pesetas, shares 250 pesetas par. Property is the Elvira mine and extensions, carrying copper and iron pyrites, at Peñaflor, and a group of claims, area 144 hectares, at Pueblo de los Infantes, Sevilla.

**VALENSUELLA COPPER CO.**

ARIZONA.

Office: 8543 W. 23d Ave., Denver, Colo. Mine office: Quartzite, Yuma Co., Ariz. Col. Richard Darling, president and general manager; F. W. Deidesheimer, treasurer; Geo. C. Foulkes, secretary. Organized November, 1901, under laws of Arizona, with capitalization \$1,250,000, shares \$1 par.

Lands, 7 claims, patented, area circa 100 acres, also a 60-acre mill and smelter site, 12 miles southwest of Quartzite, 70 miles from the Southern Pacific railroad and 15 miles from steamer landing on the Colorado river, supplies being received by water. Country rocks are limestone and schist, carrying 2 contact veins, of fair size, developed by shafts of 200' and 270', with about 1,300' of workings, showing malachite, azurite and oxide ores, giving average assays of 12% copper, 4 oz silver and \$4 gold per ton. Has gasoline power, with two 500' hoists, 2 engine-houses, 18x24' smithy, and 6 dwellings, also a 1,000' artesian well. Has a 30-ton Vulcan water-jacket blast-furnace. Idle.

**VALENTINE COPPER & GOLD MINING CO.**

UTAH.

Dead. Formerly at Bingham Canyon, Salt Lake Co., Utah. Described Vol. VI.

**VALENZUELA COPPER MINING CO.**

ARIZONA.

Office and mine: Benson, Cochise Co., Ariz. Organized 1907. Lands, circa 25 miles northwest of Benson, near the San Domingo mine of the Hub Mining &amp; Investment Co., are said to show extensive outcrops of self-fluxing copper ore.

**VALEO MINING CO.**

UTAH.

Office: care of Hon. Thomas Kearns, general manager, Salt Lake City, Utah. Mine office: Park City, Summit Co., Utah. J. P. Boyle, superintendent. Has auriferous and argentiferous copper ores. Idle.

**VALERIE MINE.**

YUKON

Mine office: White Horse, Yukon, Canada. Arthur D. Palmer, owner and manager. Mine, circa 3 miles southeast of the Arctic Chief, has a 100' shaft, in an 18' vein said to carry ore averaging about 10% copper. Has shipped a little high grade sulphide ore. Employs circa 15 men.

**SOCIETE ANONYME FRANCAISE DES MINES**

SERVIA.

**DE CUIVRE DE VALIEVO.**

Office: 18 Rue Rougement, Paris, France. Mine office: Rebelj, Valievo, Servia. M. Dueos, president; A. Bevelley, vice-president. Organized Jan. 10, 1901, under laws of France, with capitalization 2,000,000 francs, shares 100 francs par. Debentures, 56,000 francs, at 6%, in bonds of 100 francs par.

**COMPANIA MINERA BRONCOS DE VALLENAR.**

CHILE.

Office: Iquique, Chile. Mine office: Valenar, Atacama, Chile. Organized Nov. 30, 1900, under laws of Chile, with capitalization 36,000 pesos, shares 50 pesos par.

**VALLEY MINING & MILLING CO.**

COLORADO.

Dead. Formerly at West Cliff, Custer Co., Colo. Fully described Vol. VI.  
**VALLEY VIEW MINING CO.**

CALIFORNIA.

Office: San Francisco, Cal. Mine office: Lincoln, Placer Co., Cal. Lands, 90 acres, patented, showing impregnations 250' wide, with circa 25' of ore, between schistose walls. Has a gossan outcrop, nearly 110' wide and 1,000' long, carrying average gold and silver values of about \$4 per ton. Ore shipped has average about 5% copper. Has two 5' Huntington mills. Idle several years.

**VALLEY VIEW MINING CO.**

MONTANA.

Dead. Formerly at Anaconda, Deer Lodge Co., Mont.

**VALEUBIO GROUP.**

SPAIN.

Office: care of M. Iglesias, owner, 2 Tokenhouse Bidg., London, E. C., Eng. Mine office: Paimogo, Huelva, Spain. Property, including the Valerbio, San Carlos and San Andres mines, with total area of circa 280 acres, lying between the Romanera and Monterubio groups, and carrying the western extensions of the San Vicente veins, is under lease to Spanish Copper Co., Ltd.

**VALTARIO COPPER MINES, LTD.**

ITALY.

Office: 70 Queen Victoria St., London, E. C., Eng. Mine office: Conchia, Borgetto, Parma, Italy. Marquis N. Mellupi, chairman; F. Lambert, managing director; A. Ireland, secretary. Organized Apr. 25, 1907, under laws of Great Britain, with capitalization £120,000, shares £5 par; issued, £38,485.

**VAL VERDE COPPER CO., LTD.**

ARIZONA.

Dead. Formerly at Humboldt, Yavapai Co., Ariz. Fully described Vol. IV.

**VAN ANDA COPPER & GOLD MINES CO., LTD.**

BRITISH COLUMBIA.

Dead. Formerly at Van Anda, Texada Island, B. C. Fully described Vol. V.

**VAN BRITT COPPER CO.**

ARIZONA.

Mine office: Planet, Yuma Co., Ariz. Organized 1908. Lands, on Bill Williams Fork River, are said to show ore giving average gross assay values of circa \$80 per ton.

**VANCOUVER & BOUNDARY OREBED**

BRITISH COLUMBIA.

**DEVELOPMENT & MINING CO.**

Dead. Formerly at Penticton, Boundary district, B. C.

**VANCOUVER COPPER CO., LTD.**

BRITISH COLUMBIA.

Office: 4 Sun Court, Cornhill, London, E. C., Eng. Mine office: Mount Sicker, Vancouver Island, B. C. J. Procter, chairman; Cecil M. Bryant, consulting engineer; W. Cooper, secretary; Edw. Stables, superintendent. Organized Feb. 27, 1907, under laws of Great Britain, with capitalization £110,000, shares £1 par; working capital, £30,000. Debentures, £20,000 first-mortgage bonds, at 6%, due July, 1912.

Lands include the Lenora mine, adjoining the Tyee, carrying a continuation of the Tyee ore bodies in a chute of 30' to 40' width, with a strong gossan capping. Property includes the 5-mile Mount Sicker narrow-gauge railway, with 1,136 acres of right-of-way, sundry town lots at Crofton, and the Mount Sicker hotel. Also holds, under bond and lease, the Indian Chief group, at Sidney Inlet, Vancouver Island, B. C., from which 2 ore shipments were made, late 1907. Under former management the Lenora ores were divided into 2 grades, first grade averaging 7.98% copper, 3.5 oz. silver and 0.07 oz. gold per ton, and second grade, which constituted about two-thirds of the production, averaging 1.8% copper and 0.016 oz. gold per ton. Production, 1907, of Lenora,

was circa 1,700 tons of ore, carrying about 140,000 lbs. fine copper. Property considered promising.

**VANCOUVER ISLAND COPPER CO., LTD.****BRITISH COLUMBIA.**

Mine office: Sidney, Vancouver Island, B. C. Organized 1907, under laws of British Columbia, with capitalization \$100,000, shares \$1 par. Lands are at Sidney Inlet, in the Clayquot division of the Alberni district, Vancouver Island, B. C. Is said to have contracted for a 200-ton Kiblet aerial tram, to connect with ore bunkers at tidewater.

**VANCOUVER ISLAND MINING & DEVELOPMENT CO., LTD.****BRITISH COLUMBIA.**

Office: 45 Leadenhall St., London, E. C., Eng. Mine office: Duncans, Vancouver Island, B. C. F. H. Faviell, chairman; J. I. Fifield, secretary. Organized Nov. 18, 1902, under laws of Great Britain, with capitalization £50,000, shares £1 par; issued £35,895. Lands, circa 1,800 acres, apparently held under 2-year option, lying mainly east of the Tyee and supposedly carrying the eastern extension of the Tyee. The Westholm has a 510' two-compartment shaft, 700' west of known occurrence of ore in the Tyee, and has about one-half mile of workings, showing, on the 500' level, a wide mineralized zone with occasional concentrations of 3 to 10% copper tenor. The Blue Bell has a 110' shaft, from which 5 carloads of ore, shipped 1908, gave returns of 5 to 8% copper.

**VANCOUVER RAILWAY SYNDICATE, LTD.****BRITISH COLUMBIA.**

Dead. Property sold, February, 1907, to Vancouver Copper Co., Ltd. Formerly at Mount Sicker, Vancouver Island, B. C.

**VAN-BOI MINING CO., LTD.****BRITISH COLUMBIA.**

Office: Salisbury House, London, E. C., Eng. Mine office: Rossland, Trail district, B. C. Lord Ernest Hamilton, chairman; preceding officer, F. C. D. Haggard, A. B. Deable and H. W. Morrison, directors. Organized July 9, 1908, under laws of Great Britain, with capitalization £34,500, in 30,000 preference shares of 1s. par. Property is the Vancouver group, 8 claims, 1 fractional, in the Slocan district, carrying mainly silver-lead ores.

**VARIN & HUGUET.****ALGERIA.**

Mine office: El Miliah, Philippeville, Algeria. Property is the Achaiches mine, which, in 1905, employed 47 men. At last accounts planned to smelt ore at the mine. Presumably idle.

**VEILED PROPHET COPPER CO., LTD.****ARIZONA.**

Dead. Formerly at Clifton, Graham Co., Ariz. Described Vol. VI.

**VEKOL MINING CO.****ARIZONA.**

Office: Tucson, Ariz. Mine office: Vekol, Pinal Co., Ariz. Employs circa 50 men. Maj. E. S. Garnett, president; J. V. Neuhaus, vice-president; J. M. Cotton, treasurer; S. J. Garnett, secretary; Wm. Forbach, superintendent.

Lands, 42 claims, said to have been bought for circa \$200,000, in the Vekol Mountains, about 35 miles southwest of Casa Grande. Lands include 6 old properties, dating from 1881, with about 6 miles of workings, said to have produced, in the past, circa \$3,000,000 in silver and lead, and the old ore dumps are said to contain 350,000 tons of second grade ore that probably can be treated at a profit. The old mines shipped some ore carrying up to 4,000 oz. silver per ton, with considerable lead and a small amount of copper, with strong indications of increased copper values at depth. The mine has a new 380' two-compartment shaft, said to show good ore.

Equipment includes steam power, air-compressor and 3 hoists, one good for 1,000' depth. Buildings include a smithy, machine-shop, carpenter shop, office and laboratory. The mill is of 40 tons rated daily capacity. Property considered promising.

**VELARDENA MINING & SMELTING CO.****MEXICO.**

Office: 71 Broadway, New York, N. Y. Mine and works office: Velar-

deña, Cuencamé, Durango, Mex., Wm. C. Potter, chairman executive committee; H. M. Moran, general manager; Wm. Davey, mine superintendent; W. H. Foster, smelter superintendent. Is controlled through ownership of 60% of capital stock, by American Smelters Securities Co.

Lands, 2,500 pertenencias, area 6,177 acres, including the town of Velardeña, with a population of 5,000. Lands include the Ternerés and Santa María silver-lead mines, the Copper Queen mine, carrying argentiferous copper ore, and a number of smaller properties. The mines, first opened circa A. D. 1650, were worked originally for silver-lead carbonates, succeeded at depth by zinciferous and cupriferous silver-lead sulphides.

The Copper Queen, or Reina de Cobre mine, also known as El Cobre mine, is 27 kilometers by rail from Velardeña, and the ore is mainly copper, said to average about 3% copper and 250 grams silver per ton, though there is considerable silver-lead. Ores, as developed in this property, are mainly oxidized, and normal production is 400 to 500 tons daily of low grade ore.

The Santa María mine, at Velardeña, is opened by numerous shafts, and production is 100 to 500 tons daily of silver-lead ore.

The Ternerés mine is said to have produced \$22,000,000 worth of ore before coming under the present ownership. Development is by a 600' main shaft, showing good ore in the bottom, and by a main tunnel with electric haulage. The property has about 25 miles of workings, and production, mainly copper ore, though with considerable silver-lead ore, amounts to about 400 tons daily. The Ternerés has an aerial tram to Velardeña.

A 1,200-h. p. central power plant has steam power and gas producers, also a complete electric plant, with power generated partly by water, but mainly by steam and gas engines. Equipment includes electric hoists and electric air-compressors.

Buildings include necessary shops, offices and a considerable number of dwellings for employes.

The company has a private narrow-gauge railroad, known as the Ferrocarril Velardeña, of about 20 miles length, connecting the mines and smelters, the principal branch being a 29-kilometer line from Velardeña to the Copper Queen mine. The company also plans an aerial tram from the mines to the new smelter, 8 miles distant.

The concentrator, rated at 200 tons, may be increased to 500 tons daily capacity.

The reduction works include two smelters, the oldest being antiquated and out of commission.

The new smelter, blown in 1907, is about 4 miles from Pedricefia, on the Mexican National Railway. This has three 150-ton lead furnaces and three 250-ton copper furnaces, with room for an additional copper cupola. There are twelve 250-ton charging bins, surmounted by a movable electrical steel bridge, for distribution of charges, charging-cars being loaded automatically from the bins, and hauled to the charge-floor by electric locomotives. Each blast-furnace has an elliptical double brick-lined settler, 4x12' inside measurement, and slags are handled by 10-ton cars, hauled by electric locomotives. There are extensive dust-chambers and flues leading to a 230' brick stack. A briquetting plant handles flue-dust and fines. The works have no converter, matte being shipped to the Aguascalientes smelter for reduction. The lead smelter includes 5 Godfrey roasters and 5 Huntington-Heberlein converters for the desulphurization of lead sulphides, with a capacity of 125 tons daily.

#### OLIVERIO L. VELASCO y CA.

#### MEXICO.

Office: Apartado 953, Mexico, D. F. Mine office: Chichihualco, Bravos, Guerrero, Mex. Oliverio L. Velasco, general manager. Property is El Mel-

gavego mine, carrying gold, silver and copper etc., employed over 75 men at last accounts.

**SOCIÉTÉ ANONYME DES MINES DU VELAY.** FRANCE.

Office: 19 Rue Dubois, Lyons, France. Mine office: Aserat, Brioude, Haute-Loire, France. Organized June 30, 1906, under laws of France, with capitalization 400,000 francs, shares 100 francs par.

**SOCIÉTÉ MINIÈRE DE VELEZ RUBIO.** SPAIN.

Office: 43 Rue de Courcelles, Paris, France. Mine office: Velez Rubio, Almeria, Spain. Organized Feb. 14, 1902, under laws of France, with capitalization 1,500,000 francs, shares 100 francs par.

**VELVET-PORTLAND MINE, LTD.** BRITISH COLUMBIA.

Dead. Reorganized, Nov. 18, 1903, as New Velvet Portland Mine, Ltd. Formerly at Rossland, Trail district, B. C. Fully described Vol. V.

**VELVET (ROSSLAND) MINE, LTD.** BRITISH COLUMBIA.

Dead. Merged, January, 1904; in Velvet-Portland Mine, Ltd. Formerly at Rossland, Trail district, B. C.

**VENICE COPPER CO.** MEXICO.

Dead. Formerly at Soyopa, Urés, Sonora, Mex.

**VENITA MINING CO.** WASHINGTON.

Letter returned unclaimed from former mine office, Orient, Ferry Co., Wash. Christopher New, superintendent. Lands, 3 miles south of Orient, are opened by tunnel and an incline shaft showing auriferous copper sulphides.

**VENTURE HILL MINING CO.** ARIZONA.

Office and mines: Jerome, Yavapai Co., Ariz. Thos. E. Campbell, president and general manager; Geo. H. Avery, vice-president and superintendent; Chas. F. Avery, secretary; Frank E. Jordan, treasurer. Organized 1900, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par. Lands, 6 patented claims, area 110 acres, 2 miles south of Jerome, showing 2 fissure veins, claimed by company to average 90' width and to carry average value of 4.7% copper, 6.5 oz. silver and \$4 gold per ton, in oxide and sulphide ores, which is an overestimate, developed by shafts of 65' and 87', and tunnels of 205' and 457'. Out of funds and idle several years.

**VERDE APEX COPPER MINING CO.** ARIZONA.

Office: 3 West Main St., Bloomsburg, Pa. Letter returned unclaimed from former mine office, Jerome, Yavapai Co., Ariz. Chas. B. Lutz, president and treasurer; Jas. H. Mercer, vice-president; M. P. Lutz, secretary. Organized 1900, with capitalization \$3,000,000, shares \$1 par. Property was sold by sheriff, 1906, but redeemed by president for benefit of shareholders. Lands, 6 claims, area circa 90 acres, in Mescal Gulch, about 2 miles south of Jerome, slightly developed by 2 tunnels and a shaft. Idle since circa 1904, and apparently moribund.

**VERDE CHIEF COPPER MINING CO.** ARIZONA.

Office: 1616-20 Bread St., New York, N. Y. Mine office: Jerome, Yavapai Co., Ariz. Chas. L. Temphins, president; Dr. W. E. Delabarre, vice-president; Frank K. Kohler, secretary and treasurer; R. H. Smith, assistant secretary and treasurer. Organized June 29, 1900, under laws of Arizona, with capitalization \$3,000,000; shares \$1 par. Annual meeting, first Monday in July.

Lands, 13 claims, area 280 acres, in the Verde district, 7 miles south of Jerome, including the Carrigan & Gadsden group, in Mescal Gulch, adjoining the Cleopatra, having circa 1,700' of workings, showing auriferous and argentiferous sulphides. The Paragon group, 3 patented claims, has tunnels of 185', 160' and 1,066', the 150' tunnel showing ore. Diamond drilling is said to have given unsatisfactory results, and option on lands held by Lloyd G. Haines was not exercised. Idle.

**VERDE CONSOLIDATED COPPER CO.**

ARIZONA.

Office: Prescott, Ariz. Mine office: Jerome, Yavapai Co., Ariz. T. E. Chophadi, secretary and treasurer. Capitalization \$1,500,000, shares \$1 per. Lands, 8 claims; 2 miles south of Jerome. Idle several years.

**VERDE GRANDE COPPER CO.**

ARIZONA.

Office: 252 Grant Bldg., Kansas City, Mo. Mine office: Jerome, Yavapai Co., Ariz. Hon. I. H. Kinley, president; Wm. A. Forrester, vice-president; M. J. Belrn, Jr., secretary; John McQueeney, treasurer; R. A. Smith, assistant treasurer; J. C. Scott, superintendent; preceding officers, Thos. Taylor, Jos. Larson and R. B. Kirwin, directors. Also has an advisory board, of Jerome mining and business men. Organized September, 1906, under laws of Arizona, with capitalization \$8,000,000, shares \$1 par.

Lands, 10 claims, area 120 acres, partly patented, about one mile south and west of the United Verde, on the southern slope of Smelter Hill, the United Verde being on the opposite slope, lands being located on a precipitous hill, with poor roads. Development is by 3 short tunnels and a 720' two-compartment main shaft on the Little Daisy claim, planned to be sunk 1,000', sunk in slate and schist showing scattering copper sulphides carrying good gold and silver values, ore occurring mainly in schist. Management believes that lands carry the extension of the United Verde ore body. Equipment includes a 50-h. p. hoist and Rand air-compressor, with bunk-house, eating-house and smithy. Company plans a smelter, but should open a mine first. Work has been pushed vigorously.

**VERDE GRANDE COPPER CO.**

MEXICO.

Office: 308 North 6th St., St. Louis, Mo. Operating office: Apartado 98, Hermosillo, Sonora, Mex. Mine office: Ures, Sonora, Mex. J. L. Zimmerman, president; Wm. A. James, first vice-president; G. P. Hammer, second vice-president; Thos. Tyson, secretary; R. D. Wood, treasurer; Jairus D. Fresh, general manager; Jas Penman, superintendent. Organized 1901, under laws of Arizona, with capitalization \$2,500,000, shares \$5 par.

Lands, 500 acres, in the Ures district, circa 40 miles northwest of Hermosillo, partly timbered with ironwood, cottonwood and mesquite. Main tract of 460 acres includes La Verde Grande, La Cobriza and San Luis groups, claimed to show veins of 10' to 100' width, with widest vein lowest in grade. The Verde Grande group has contact deposits in limestone, near igneous intrusives, giving ores assaying 6% copper, 6 oz. silver and \$1 gold per ton. La Verde and La Cobriza groups have a contact vein, between granite and quartzite, claimed to be of 30' to 60' width, and traceable 7,000', carrying argentiferous and auriferous ore, assaying 5.5 to 16% copper, with gangue of talcose limestone, said to be interstratified with granite and quartz. Property as a whole has 6 shafts and tunnels, with nearly one mile of workings, claimed by management to show 200,000 tons of ore.

The smelter, 1½ miles from the principal workings, completed 1904, has a 100-ton Allis-Chalmers water-jacket blast-furnace, but company claimed that coke was too expensive and installed a 30-ton Medbury furnace, burning charcoal, made in 3 kilns, from ironwood and mesquite, claimed to be made for 16 pesos per ton. The management reported, Apr. 24, 1906, that "on account of the exceeding hardness of the charcoal, and in order to reduce the speed necessary of the pulverizer, they would add additional machinery which would considerably reduce the power at present required to run the machinery, and thereby lessen the expense of refining the ore." Any management that finds it difficult to pulverize charcoal should be set to pounding sand, as the next easiest job. At last accounts, June, 1908, the management explained to shareholders, who seemed a trifle disappointed, at the lack of long-promised dividends, that the proposition, as developed, was truly magnificent, but that, owing

to low pieces of copper, it was necessary to tap richer veins, and it was found necessary to develop sulphide ores, the management explaining that sulphur is a fuel, and sulphide ores the least refractory in reduction.

From December, 1907, to June, 1909, production was 51,181 lbs. black copper, of 95 to 96% tenor, 4,021 oz. silver, and 16 oz. gold, sold for 12,495 pesos.

A leaching plant was being installed, 1904, but nothing has been heard of it recently, and presumably it was a failure, like everything else tried by the company. At last accounts the company was considerably in debt, to several large shareholders, who had advanced funds to keep the property going. The advertising of this company has been utterly untruthful, though the present management apparently is not the one that promoted the corporation; hence should not be held responsible for its bad start, but the methods of development and operation employed have been vacillating and inefficient from the beginning, and the company's metallurgical efforts are ridiculous.

#### **VERDE KING COPPER CO. ARIZONA.**

Dead. Formerly at Jerome, Yavapai Co., Ariz. Fully described Vol. VI.  
**VERDE MINING CO., LTD. IDAHO.**

Mine office: Osburn, Shoshone Co., Idaho. L. J. LePage, president; J. E. Lefever, vice-president; W. G. Lefever, treasurer; A. L. Williams, manager; preceding officers and C. C. Gillen, directors. Organized September, 1906, with capitalization \$1,000,000, shares \$1 par. Lands, 12 claims, in McFarren Gulch, 3 miles from Osburn, adjoining the Gray on the southwest. Has a shaft and tunnel, showing ore assaying up to 6% copper, 11% lead and 25 oz. silver per ton.

#### **VERDE MINING & MILLING CO. WYOMING.**

Office: 523 Bee Bldg., Omaha, Neb. Letter returned unclaimed from former mine office, Battle, Carbon Co., Wyo. C. M. Jacques, president; J. E. Thacher, secretary and treasurer; G. F. Hinton, general manager; preceding officers, G. H. Lyons and A. H. Crow, directors. Lands, 4 claims, area 80 acres, showing a 35' fissure vein, carrying malachite, bornite and chalcopyrite, giving assays of 5 to 21% copper, 6 oz. silver and \$5 gold per ton, opened by shafts of 40' and 115'. Has a 40-h. p. steam plant. Idle several years and apparently moribund.

#### **VERDE QUEEN COPPER CO. OF ARIZONA. ARIZONA.**

Dead. Succeeded, December, 1906, by Jerome Verde Copper Co. Formerly at Jerome, Yavapai Co., Ariz.

#### **VERDE RIVER COPPER CO. ARIZONA.**

Office: care of Geo. Hundinger, secretary, Newport, Ky. Mine office: Jerome, Yavapai Co., Ariz. Lee Pfau, president; C. M. Werk, vice-president; Samuel Leonard, superintendent. Organized with capitalization \$2,500,000, shares \$1 par, as a merger of the New England-Arizona Mining Co. and Pfau Gold Mining & Reduction Co.

Lands apparently 85 claims, in the Cherry Creek district, circa 9 miles south of Jerome, including the Pfau group of 16 claims, area 200 acres; the New England-Arizona group of 17 claims, and a new group of 8 claims, carrying flaking ore and timber, about 5 miles east of the Pfau. The New England-Arizona mine, 2 miles from Turkey, has a number of shallow shafts and short tunnels. The Pfau mine has several thousand feet of working, with steam power and a 100-ton concentrator. Company is not regarded with especial favor.

#### **FRANCISCO VERGARA L. CHILE.**

Office and mine: Petorca, Acogasqua, Chile. Property is El Mauro mine, opened 1860, and El Mauro smelter, making circa 225,000 lbs. fine copper yearly, when working. Idle several years.

**VERMONT & ARIZONA COPPER CO.****ARIZONA.**

Office: 150 College St., Burlington, Vt. Letter returned unclaimed from former mine office, Tombstone, Cochise Co., Ariz. Hon. Hamilton S. Peck, president; C. G. Norris, vice-president; J. H. McLoud, secretary and treasurer; preceding officers, W. H. Varnum, C. H. Stevens, Geo. A. Kimball, W. R. Cheney, Dr. D. C. Hawley and Hon. W. T. Smith, directors; J. A. Collier, superintendent. Organized July 25, 1899, under laws of Arizona, with capitalization \$1,500,000, shares, \$5 par.

Lands, 11 claims, area 220 acres, 4 miles from Gleeson, in the Turquoise district, on the western slope of the Dragon Mountains, showing 2 gold and silver veins and several copper veins, latter giving assays of 23 to 43% from selected carbonate ore. Development is by a 230' main shaft, with circa 1,500' of workings, there also being about 1,000' of workings on 10 adjoining claims. Company claims to have developed a large body of low-grade milling ore. Equipment includes steam power. Idle and apparently moribund.

**VERMONT & BOSTON MINING CO.****VERMONT.**

Dead. Formerly at Berkshire, Franklin Co., Vt.

**VERMONT COPPER CO.****VERMONT.**

Office: 48 Exchange Place, New York, N. Y. Mine office: South Strafford, Orange Co., Vt. F. A. Berthold, secretary. Organized circa 1906, under laws of Arizona, with capitalization \$1,000,000, as successor of Elizabeth Copper Co.

Property is the old Elizabeth mine, opened 1793, for magnetic pyrites, used in making copperas. It being found, eventually, that the mine carried an average of about 3% copper, in the form of chalcopyrite disseminated in pyrrhotite, the Elizabeth became the largest American copper producer, previous to the opening of the rich mines of Lake Superior. Ore bodies occur as lenses, in foliated micaeous schists, the lenses overlapping and wedging out at bottom. Main ore body at the Elizabeth has been mined for 700' in length, and at one point was 100' wide. Main tunnel is 1,340' long, and mine is estimated, by present management to have about 300,000 tons of ore in sight. Equipment includes a steam plant and small smelter, also a concentrator using the Rowland magnetic separation process. Nearest railroad, 8 miles, is the Boston & Maine. A dam has been started, to develop hydro-electric power, and company plans a 300-ton smelter. Mine was reopened March, 1908, by predecessor of present company.

**VERONA MINING CO.****UTAH.**

Mine office: Bingham Canyon, Salt Lake City, Utah. Forrest E. Derrenouque, manager. Development is by a 300' tunnel.

**VERONICA COPPER MINING CO.****MONTANA.**

Dead. Presumably succeeded by Butte & Veronica. Formerly at Butte, Silver Bow Co., Mont.

**AKTIESELSKABET VESTERDALENS KOBBERGRÜBEN,****NORWAY.**

Office: Mälsterstein, Sweden. Mine office: Næverfjord, Norway. Henning Nordlund, chairman; August Siljeström, superintendent. Organized 1903, under laws of Norway. Production, 1902, was 160 tons first grade and 1,500 tons second grade ore, containing circa 375,000 lbs. fine copper. Employed circa 60 men at last accounts.

**VETA GRANDE MINING CO.****MEXICO.**

Dead. Formerly at Bacochi, Arizpe, Sonora, Mex. Described Vol. VI.

**VETA GRANDE MINING CO.****MEXICO.**

Dead. Property included the Bertha, Carolina and Castillo mines, carrying auriferous and argentiferous copper ore, with a 20-ton mill. Perry Sharpe was manager. Former office was Mills Bldg, San Francisco, Cal. Formerly at Altar, Sonora, Mex.

**VETA GRANDE MINING & MILLING CO.** COLORADO.

Office and mine: Steamboat Springs, Routt Co., Colo. Lands, on Copper Ridge, 4 miles from Steamboat Springs, have a 177' tunnel, cutting a vein of 20' estimated width, carrying good gold values.

**VETA RIOA SILVER & COPPER MINING CO.** MEXICO.

Dead. Formerly at Charcas, Moctezuma, San Luis Potosi, Mex.

**VETERAN-ELY EXTENSION COPPER CO.** NEVADA.

Dead. Was organized circa 1906, with capitalization \$1,000,000, shares \$1 par. Formerly at Ely, White Pine Co., Nev.

**VETERAN-ELY COPPER CO.** NEVADA.

Dead. Lands sold, circa 1907, to Cumberland-Ely Copper Co. Formerly at Ely, White Pine Co., Nev.

**VETERAN MINE.** NEVADA.

Owned by Cumberland-Ely Copper Co.

**VICKERY-THOMPSON MINING CO.** MEXICO.

Dead. Succeeded by Thompson-Lehmer Mining Co. Formerly at Ocotlán, Oaxaca, Mex. Described Vol. VI.

**VICURAYWIN MINING CO.** NEW MEXICO.

Mine office: Hatchita, Grant Co., N. M. Organized 1908. Lands are on the hill back of the King mine.

**VICTOR & BELLE CROWN MINING CO.** ARIZONA.

Mine office: Salome, Yuma Co., Ariz. John B. Martin, president and general manager; F. C. Piper, vice-president; J. H. Matteson, secretary and treasurer; preceding officers, J. E. Matteson; T. H. Finnegan, W. E. Enos and R. R. McDonald, directors. Lands, 7 claims, in the Harevar Mountains, circa 8 miles north of Salome, opened by a 100' tunnel, showing a 5' vein with a 3' paystreak, and a 150' shaft showing a 7' vein with a 30' paystreak assaying 15 to 20% copper and \$15 to \$20 gold per ton.

**VICTOR BONANZA MINING CO.** CALIFORNIA.

Dead. Formerly at Dos Palos, Merced Co., Cal.

**VICTOR CONSOLIDATED MINING CO.** IDAHO.

Mine office: Wallace, Shoshone Co., Idaho. E. P. Spalding, general manager. Has silver-lead and argentiferous copper ores.

**VICTOR CONSOLIDATED MINING CO.** UTAH.

Mine office: Eureka, Juab Co., Utah. Vivian McCane, general manager; Joseph Treloar, superintendent. Lands include the Victor, Boss Tweed and other mines, carrying gold, silver and copper ores. Has steam power. Production, 1907, was only 4 carloads of ore.

**VICTOR COPPER MINING CO.** ALASKA.

Mine office: Ketchikan, Alaska. Lands, on Seal Bay, Gravina Island, 12 miles from Ketchikan, are slightly developed by tunnel.

**GEWERKSCHAFT VICTORIA BLIERZ UND** GERMANY.**ZINKBLINDE GRUBEN.**

Office: Köln, Germany. Mine office: Nassau a/L, Rheinprovinz, Germany. Lands, 376 hectares, carrying silver, lead, zinc and copper ores.

**VICTORIA BOULDER MINING CO.** COLORADO.

Mine office: Salina, Boulder Co., Colo. Ores carry gold, silver and copper. Has steam power. Presumably idle.

**VICTORIA CHIEF COPPER MINING & SMELTING CO.** NEW MEXICO.

Office: 100 Broadway, New York, N. Y. Mine office: Engle, Sierra Co., N. M. Col. Robt. R. Hopper, president; Stephen J. Maez, vice-president; W. H. Weston, general manager; J. H. Bigelow, secretary and treasurer; preceding officers, Wm. Buchanan, Henry G. Munger, Eugene S. Neal, Howard Clinton Dickinson and Dana A. Rose, directors. Organized 1906, under laws of Arizona, with capitalization \$3,000,000, shares \$1 par.

Lands, 11 claims, 1 fractional, area 246 acres, owned in fee, and 3 claims, 1 fractional, area 30 acres, held under bond and lease. Property, on the western slope of the Caballo Mountains, is about 2 miles east of the Rio Grande River, 12 miles from the Santa Fé railroad, at Engle, and 25 miles west of Cutler. Company claims its lands are in the same general range of mountains as the Bisbee camp of Arizona, which is absolutely untrue, the Victoria Chief being in the Caballo Mountains, caballo being Spanish for horse, while the Bisbee camp is in the Mule Mountains, and between the two lie the Burro Mountains, burro being Spanish for jackass.

Ore occurs in chutes, in vertical fissures, in quartzite, ores being cuprite, malachite, bornite, and chalcopyrite, from which selected ores are said to assay up to 25% in copper tenor. Management claims to have developed a considerable body of 20% ore, carrying copper, gold and silver values, which statement is not credited. Wm. A. Farish is said to have stated, December, 1902, that the mine could feed a 100-ton smelter with ore of 10% and possibly of 15% tenor, which also is doubted.

The property was bought of the defunct Black Peak Gold Mining Co., at sheriff's sale. The only work of importance is by 2 tunnels, showing occasional ore chutes up to 10' in width, and 50' to 100' long. The ores apparently are shallow, and confined to quartzite. There is a 500' tunnel on the Marion claim, said to give ore returning average assays of 29% copper and \$1.20 gold and silver per ton. This property was said, March 11, 1906, to have 2,200' of workings. The property is 12 miles from Engle, to which a wagon road has been built, supplies having been packed in previously.

The company is said to have ordered, November, 1906, a 10x10" compressor, 3 rock-drills and a 32-h. p. gasoline engine. Buildings include a general store, and the company was said, 1907, to be building a fine hotel at Cutler, and to be making wax models of the mountains.

The company was said to plan a \$250,000 smelter, which would be the height of folly, until ore is developed. A small amount of ore from the Oahu claim was shipped, by burro, some years ago by former owners, and the present company shipped a carload of ore, 1907, to El Paso smelter, running 20.3% copper.

The company claims to be free from debt, with lands paid for, and claimed to have \$75,000 in the treasury, which is considered doubtful, and is said to have started a national bank at Engle. In October, 1906, the company was selling stock at 75 cents per share, with guarantee to buy some back within 6 months, at 6% interest, if the purchaser were dissatisfied. The company was financed by Hopper & Bigelow, junior member of the firm being a woman. There has been some litigation over titles, said by company not to be serious. Though asked repeatedly, company has failed to furnish any definite statements. The company claimed, in its advertisements, to own 10 full mines, of 20 acres each, which was untrue, as the "mine" were merely claims. The company claimed, in its advertisements, that its mine was located in a country "that has demonstrated, beyond doubt, the greatest possibilities in copper mining in the world." This is about as far from the truth as anyone could get. The company is regarded with suspicion.

#### VICTORIA COPPER MINING CO.

MICHIGAN.

Office 512-60 Congress St., Boston, Mass.; Mine office, Victoria, Ontonagon Co., Mich. Employees circa 100 men. Hon. Fred H. Williams, president; Chas. D. Hatchette, vice-president; James P. Graves, secretary and treasurer; preceding officers, Wm. F. Humphrey and Arthur W. Chesterton, directors; Geo. Hooper, superintendent; Thos. Carlyon, mine superintendent; Chas. Caddo, mill superintendent; R. S. Schultz, Jr., engineer; C. R. Everett, clerk.

Organized Jan. 16, 1899, under laws of Michigan, with capitalization

\$2,500,000, shares \$25 par; paid in, \$12. Has called an assessment of \$1, payable Jan. 11, 1909, last preceding assessment having been \$1, August, 1905. Net earnings, 1907, after deduction of construction charges, were \$13,837.38. Company began 1908 with quick assets of \$68,074.23, and bills payable of \$19,407.70, leaving a balance of assets of \$48,666.53. Shares are listed on the Boston Stock Exchange. First National Bank, Boston, registrar. Annual meeting, fourth Monday in February.

Lands, 2,395 acres, including 2,289 acres mining lands, in Sections 19, 20, 29, 30 and 31, Town 50 North, Range 39 West, and Sections 24, 25 and 36, Town 50 North, Range 40 West, in Ontonagon county, Michigan, giving a tract with an extreme width of 2 miles east and west, and an extreme length, north and south, of 2 $\frac{1}{4}$  miles, lying just west of the Ontonagon river, practically all on the mineral belt, only about 100 acres lying on the Eastern Sandstone. The tract may carry the western extension of the amygdaloidal bed under development by the Lake Copper Co. Neighboring mines, all idle for many years, are the West Minnesota on the north, National on the east and Devon on the west. Nearest active property is the Michigan, 3 miles northeast. Litigation over a 40% undivided interest in 320 acres of land, in the main mine tract, resulted, 1908, in a verdict of \$9,647.70 damages against the company. The lands are well timbered, with an inexhaustible supply of good sandstone for building purposes. Nearest railroad is the Chicago, Milwaukee & St. Paul, at Rockland, 3 miles distant.

The first attempt at Lake Superior copper mining, in historic times, was made, on what is now Victoria property, in the winter of 1770-1771. The next mining done was in 1849, when the property was opened, under the name of Cushin, on a line of prehistoric pits containing masses of native copper, one weighing upwards of a ton. Name was changed, 1850, to Forest, and the property was reorganized, 1858, as Victoria Mining Co. Under these titles the property made 186 tons 1,279 lbs. fine copper, at a loss of about \$180,000. The first stamp-mill was burned by a forest fire, and the second was swept away by a flood. The property was operated regularly, on a small scale, 1849-1855, and thereafter spasmodically. The mine was unwatered in 1881, but remained idle until work was begun, March 1, 1899, by present company.

The mine is located on a high and steep hill, notwithstanding which the solid rock is covered with heavy sand and clay drift. The Forest amygdaloidal bed, on which the mine is opened, is 5' to 30' wide, with an average width of circa 12', very irregular in width, rolling in dip and bunchy in contents, with a strike of N. 66° E., and average dip of 61° to the northwest, the strike giving about 1 $\frac{1}{2}$  miles of outcrop on Victoria lands. The Forest bed evidently is one of the cupriferous amygdaloids of the Evergreen belt, opened to the northeast by the Mass and Adventure, but which one of the series is uncertain.

The old mine had 4 shafts, numbered from east to west, opened erratically, with shafts and levels at various intervals, lifts being opened at distances of 55' to 65', as the spirit moved. Old No. 2 shaft, chosen for new operations, was cut down to 2-compartment size. The formation is much disturbed near the surface, and the lode is irregular in dip, with widening noted at depth, and with more regular walls. Some good stoping ground is shown from the 7th level downward, until near the bottom, where the bed widens to about 80', carrying only occasional bunches of copper. The Forest amygdaloidal bed is low in grade, but fairly regular in copper contents, showing a little heavy copper, but carrying values mainly in medium grade stamp-rock. All levels down to the 18th are connected by winzes, giving ventilation and safety. The ground stands well and the mine is without timber, except in the shafts. About 400,000 tons of stamp-rock have been developed. The copper chute

rakes to the southwest, and the best ground, below the 15th level, has been found in the southwestern drifts. The mine operates 18 power drills.

In addition to productive openings, on the Forest lode, the mine has about 3,000' of crosscuts, showing sundry cupriferous beds, but none of promise equal to the Forest. The footwall crosscuts show an amygdaloid underlying the Forest at an average depth of only 6', this bed being well mineralized for 4' to 5' along the footwall, producing small masses up to 50 lbs. weight, the copper occurring mainly on the foot, with considerable epidote on the hanging-wall. Underlying this epidotal bed, at a distance of circa 60', is a 6' amygdaloid, showing much epidote and allied minerals, and a little stamp-rock. An amygdaloid called the Glenn, opened 1900, gave a fair showing of copper at the bottom of a shallow shaft. Diamond-drill borings north of the mine have shown nothing of special promise. The mine has crosscut tunnels of 780', 150' and 419', and some work was done, 1908, in a tunnel on the side of a bluff near the river, where a lode carrying some copper was cut.

No. 1 shaft, which is 240' east of No. 2, is an old opening, remaining from a previous management, and is 188' deep, and idle.

No. 3 shaft, 1,190' west of No. 2, also is an old shaft, of 350' depth, and is idle.

No. 4 shaft, also an old opening, is only 180' in depth, and also is idle.

No. 2 shaft, 8x12' inside measurements, with 2 compartments, is 2,089' deep, bottomed at the 22d level, with levels opened at 100' intervals below the 4th. The mine has 29,563' of workings, estimated to show 400,000 tons of stamp-rock, with 300,000 tons blocked out for stoping. The east drift, on the 22d or bottom level, showed some good ground, but the west drift was in poor ground continuously, during 1908. A crosscut, of circa 1,500' length, sent south on the 19th level, has shown one amygdaloidal bed of some promise.

No. 2 shaft has a frame shaft-rockhouse, 34x40', with a 16x36' wing, and 90' high. The power-house is 36x40', with a 24x28' wing, of wood on stone foundations, with steel roof. There is a 20x48" Webster, Camp & Lane duplex-cylinder hoist, with single conical drum of 8' minimum and 12' maximum diameter and 11' face, raising 4-ton skips, set on concrete foundation, bedded on rock. The old 12x28" Nordberg hoist, with drum of 5' diameter and 6' 9" face, rated at only 1,200' capacity, was used for sinking No. 2 shaft to its full depth of 2,089'. Equipment includes two 12-drill Rand air-compressors and 20 rock-drills.

An exploratory shaft, started October, 1907, circa 2,600' east of the present shaft, with 140' deep, March, 1908, and a little drifting was done, meeting with small encouragement.

Buildings include a 30x60' machine-shop, of wood, with iron roof, a 28x34' carpenter-shop, 24x50' smithy, 24x72' warehouse, a 2-story frame boarding-house and office, 27x64', with a 10x37' wing, a 19x41' frame schoolhouse, stone changing-house, general store and 58 dwellings, with a total of 80 buildings owned by the company. A 10x16x28' storage cistern holds water from the mine for feeding boilers, and water for domestic use and fire protection is pumped, by a steel windmill, from a well having a storage tank and 750' of water mains.

The company has a sawmill with a 56" circular saw, furnishing timber and lumber for requirements of the property, which, 1907, sawed 282,936' of lumber.

A large water-power has been developed from Glenn Falls, on the west branch of the Ontonagon river, about one mile from the mine, at a cost of \$200,000. This is the best natural water-power of the Lake Superior copper district, the stream dropping nearly 150' in 1 1/4 miles, by a series of small falls, between which are numerous rapids, with sandstone bottoms. Power is developed by means of a dam, canal and shaft. The dam, built up from excavations

tions in bedrock, is 320' between abutments, and has 32 eighteen-inch "I" beams, 10' apart, sunk vertically 5' to 10' in bedrock, with cement filling. The dam has an extreme height of 24', with width of 14' at the bottom and 8' at the top, and has a 320' main section, with wings of 100' and 160', giving a total length of 580', built with an arch up-stream, giving great strength. The dam is faced, on the water side, with 5x10' plates of  $\frac{1}{2}$ " steel, bolted to the steel "I" beams through the concrete. The center of the dam has an apron 80' wide, also a floating boom to guide logs, as the stream is used for logging operations, the dam being substantially built, so that it cannot be torn out by a log-jam. The outlet is a 44" steel pipe, leading from the bottom of the dam to the power canal. In order to insure an equable water supply a storage dam has been built at the head of the river, near Lake Gogebic.

The canal diverting water from the dam, nearly 6,000' in length, runs for about 2,000' through sandstone and 4,000' through alluvium. On the bank of the canal is a pipe-line, providing compressed air for the removal of sand by an air-lift, this being a novel form of dredging. The canal is 25' wide at the top, 16' wide at the bottom and 16' deep. The outlet of the canal has 6 gates, in two sets, separated by a heavy concrete abutment. The gateways are made of 20" "I" beams, set vertically 6' apart, with 6 gates of heavy oak planking, worked vertically by rack and pinion, actuated by water power. The canal leads, from the fore-dam, to 3 vertical inlet shafts, 10' from center to center, each 5' in diameter and 334' 6" deep, lined with concrete. The shafts were sunk through solid sandstone, by means of 5" holes bored to the required depth, after which the 5" holes were enlarged to 5'-holes, by reaming with a special bit having 4 cutting arms, each 30" in length, actuated by a No. 9 Rand drill.

Air formerly was drawn into the shafts through 5,000 tubes of  $\frac{3}{8}$ " diameter, but there now is a single opening at the top of each shaft, air being carried downward, as bubbles, by the falling water. At the bottom of the three shafts is a tunnel of 360' length, leading to a large fan-shaped air-compression chamber, 26' in height, 18' wide at the entrance of the tunnel and 60' wide at the extreme end, lined with boiler-plate. The impinged air, pulled down the shafts by suction and swept along the tunnel in bubbles by the rushing waters, is released, in the compression chamber, and the constant accession of fresh air-bubbles, in myriads of millions, causes compression, the air being held from escaping backward by the superior pressure of the falling water. The plant was designed for an air-pressure of 123 lbs. per square inch, and, when this pressure is exceeded, the air forces the water in the chamber below the mouth of a 12" vent-pipe, leading to surface. When, in operation, the pressure exceeds 123 lbs. per inch, which it does speedily when the power is not used, the air rushes upward through three hundred feet of pipe with tremendous force, carrying along with it some of the water which pulled it down, throwing a fine spray hundreds of feet in the air, with terrific roar. Despite reports to the contrary, the air-chamber is not leaking. The outflow shaft, which would be called a tail-race if on surface, is sunk at an angle of 80°, and leads to the lower river.

The hydraulic-pneumatic power plant was completed May, 1906, and begun furnishing 4,000 to 5,000 h. p. under a full head of water, and has shown an efficiency of 82%, under test. This plant is the most powerful single-unit air-compressor in existence, and was the fifth installation of the sort in the world. It is possible to operate one, two or three of the inlet shafts, if so desired, with corresponding variation of the energy developed. There has been some trouble with shortage of water, this being a difficulty that is faced by many power plants dependent upon water. The simplicity and economy of the Victoria power plant lie in its being absolutely automatic. No machinery is required,

the power being drawn off by a pipe, from the compression chamber. Not a pound of waste nor a gallon of oil is required for the operation of the plant.

The mine and mill are connected by a 4,800' tramline in 2 sections, the upper having a grade of 6% and the lower a grade of 12%. A stationary hoist at the top of the incline serves as a starter, loaded cars bring back empties. A retarding engine might be made to develop power from the tram-line, were it not that the Victoria already has all the power it can use, delivered practically free, except for the interest on the cost of the installation. The tram-line enters the mill over a 700' trestle.

The mill, near the hydraulic works, is 50x126' in size, of wood, on concrete foundation, equipped with an Alis-stamp, which was given a 24" cylinder, 1908, increasing its capacity to circa 500 tons daily. Foundations of mill and machinery are of concrete beds, capping solid sandstone, machinery being anchored by eye-bolts cemented into the rock. The stamp, and part of the washing machinery and shafting, were brought from the old mill of the Belt mine. Washing machinery includes 28 Hartz jigs, 4 Wilfley tables, a Standard table taking middlings from the Wilfleys, 8 slime-tables, and 4 sizers. The mill was started June, 1906, and is said to give tailing losses of only about 0.1%. Mineral is smelted by the Calumet & Hecla.

Production has been as follows: 546,334 lbs. fine copper in 1906; 104,783 tons of rock hoisted and 95,035 tons of rock stamped, yielding 1,207,337 lbs. fine copper in 1907, giving an average production of 0.63%, or 12.7 lbs. finished copper per ton, secured at a cost of 15.8 cents per lb. Company ended 1908 stamping circa 425 tons of rock daily, making therefrom about 60 tons fine copper monthly, with an average return of about 12 lbs. per ton. The old mine, as a whole, is not looking especially well, but the company plans cross-cutting to the Eastern Sandstone, and, having plenty of land in that vicinity, may be considered to have fair prospects of finding something of greater promise than the present workings. The property has a great advantage in the possession of the cheapest power imaginable, and has a prudent and capable management.

#### VICTORIA COPPER MINING CO.

UTAH.

Mine office: Ashley, Uintah Co., Utah. Long idle and apparently moribund.

#### VICTORIA GOLD & COPPER MINING CO., LTD. BRITISH COLUMBIA.

Office: English Point, B. C. Mine office: Rossland, Trail district, B. C. Frank E. Starkey, president and general manager; Albert G. Starkey, secretary and treasurer. Capitalization \$1,000,000, shares \$1 par. Lands, 200 acres, lying west of Rossland. Idle several years and presumably moribund.

#### VICTORIA MINE.

CALIFORNIA.

Mine office: Hornitos, Mariposa Co., Cal. Property shows a mineralized zone of schistose diabase between granodiorite walls, with a gossan of 300' to 600' width carrying cuprite, malachite, azurite, bornite and tetrahedrite, all ores, including those in the gossan, being more or less auriferous. Mine was a considerable producer, circa 1865, employing 300 men. Idle since circa 1906.

#### VICTORIA MINE.

ONTARIO.

" Owned by Mond Nickel Co., Ltd.

#### VICTORIA MINING & SMELTING CO.

NEW MEXICO.

Office: 502 Main St., Joplin, Mo. Mine office: Organ, Dona Ana Co., N. M. Capitalization, \$2,500,000. Lands, 25 claims, area 500 acres, on the eastern side of the Organ Mountains, of which 18 are said to be silver-lead claims and 7 copper claims, yielding ore assaying 26% in lead tenor and 9% in copper tenor, with good silver values.

#### COMPANIA MINERA VICTORIAS DE CHACARILLAS.

CHILE.

Office: Iquique, Chile. Mine office: Pica, Tarapaca, Chile. Organized

**VICTORIAS—VIDAL I VIDELA.**

1399

Nov. 28, 1906, under laws of Chile, with capitalization \$3,600,000 pesos, shares 100 pesos par.

**VICTOR MINING CO.**

COLORADO.

Office and mine: Grand Junction, Mesa Co., Colo. Organized 1907. Lands, 8 claims, in the La Sal district, said to give assays of \$33 gold per ton from surface ores.

**VICTOR MINING & SMELTING CO.**

MEXICO.

Letter returned unclaimed from former office, Nogales, Ariz. Mine office: La Cananea, Arizpe, Sonora, Mexico. J. L. Trauger, acting president; Paul Jones, secretary. Organized May 9, 1905, under laws of Arizona, with capitalization \$1,000,000, shares \$10 par, increased, 1907, to \$1,500,000. Lands, circa 18 miles north of La Cananea, are said to show copper ore. Presumably idle.

**VICTORY COPPER MINING CO.**

ALASKA.

Mine office: Ketchikan, Alaska. Patrick Henry, general manager. Company is said to plan driving a tunnel through a mountain.

**PELIK VICUÑA.**

CHILE.

Office and mine: Higuera, La Serena, Coquimbo, Chile. Property is 5 mines and a smelter. The Champeta mine, opened 1855, the principal property, is the deepest in the district, showing a considerable number of parallel veins, with a main vein of 5' to 7" width dipping 45° to 80°. The oxidized zone, of about 70 meters depth, is followed by 30 meters of rich secondary sulphides, succeeded by chalcopyrite of 10 to 15% reported average copper tenor, presumably after selection. The Panchita mine, opened 1850, is about 350 meters in depth. The San Ramón mine, opened 1851, is 270 meters in depth, having a vein of 4' average and 15' extreme width, carrying low-grade ores. La Cortada mine, opened to depth of 600 meters and length of 300 meters horizontally, shows a vein of 3' to 4' average width, ores of La Cortada and San Ramón averaging about 5% copper tenor only, rendering them unavailable at present, though of future promise. La Seditaria mine, opened 1893, is about 180 meters in depth with slight development.

The smelter, at Higuera, 18 kilometers from Teterabillo, the nearest rail-road point, has 8 reverberatory furnaces, producing eges of about 50% average copper tenor. The Champeta mine in 1903 produced 11,950 metric tons of ore, of 10 to 11% average copper tenor, and production of all properties, 1903, was 1,618,402 lbs. fine copper.

**SANTIAGO VICUNA.**

CHILE.

Office and works: Huasco, Freirina, Atacama, Chile. Property is two smelters. El Astillero works, at Huasco, include a smelter and mill, latter having a rock crusher and stampa. The smelter has 6 blast-furnaces calcining furnaces and 3 reverberatory furnaces, burning imported coke; employing 93 men at average wages of 1.5 pesos daily, and, in 1903, smelted 23,000 metric tons of ore averaging 4.85% copper, making bars of 96% copper tenor, with slags averaging 0.8% copper. Production, 1903, of this smelter, was 1,818,864 kilograms fine copper.

El Llario smelter, at Morada, 27 kilometers from Barco, the nearest railway station, has 2 reverberatory furnaces, producing eges of about 50% average copper tenor, with slags running 0.5% copper, employing 50 men, at average wages of 1.75 pesos daily. Carriage charges to railway are 6 pesos per metric ton, and fuel is imported coke, costing 27 pesos per ton. Production, 1903, from 2,929 tons of 15% ore, was 359,070 kilograms fine copper. Production, 1903, of both works, was 3,698,291 lbs. fine copper.

**VIDAL I VIDELA.**

CHILE.

Mine office: Cerillos, Coquimbo, Chile. Property is the Hermanos mine, idle except for leaching mine waters, from which 162 metric tons of precipitate

of 65% copper tenor were secured, 1903, and sold to smelter at Guayacan, being equal to 233,044 lbs. fine copper.

**VIELLA COPPER CO., LTD.**

SPAIN.

Dead. Compulsorily wound up, February, 1903. Formerly at Viella, Huasca, Spain.

**COMPÀNIA MINERA VIESCA Y COAHUILA.**

MEXICO.

Mine office: San Juan de Guadalupe, Durango, Mex. Property is El Sol, La Lyne and La Estrella mines, carrying argentiferous lead and copper sulphides. Has steam power, employing circa 150 men, at last accounts.

**VIGNES KOBBERVÆRKS AKTIEBOLAG.**

NORWAY.

Office: Talbodgaden 8B, Christiania, Norway. Mine office: Røros, Trondhjem, Norway. Property includes the Vigsnes and Stavanger, better known as the Meraker mines, old properties opened to great depth, deepest shaft being 2,410'. Properties were among the principal copper producers of Norway, and were worked, 1865 to 1894, by a Franco-Belgian company, producing 900,000 tons of cupriferous pyrites, production, 1895, having been 950 long tons fine copper. Ore averages about 2% copper and 45% sulphur, with small quantities of ore of higher copper tenor. Has a hydro-electric power plant, installed 1907, and about 10 miles of aerial trams, connecting the mines with a concentrator, built 1907. Company plans a production of circa 50,000 tons of cupriferous pyrites yearly, beginning 1909.

**VIKING COPPER MINING CO.**

WASHINGTON.

Office: care of Frank P. Milcark, Spokane, Wash. Mine office: Orient, Ferry Co., Wash. Lands, 3 claims, 3 miles from Orient, near the Napoleon mine, in the Pierre Lake district. Mine has a vein of 125' claimed width, carrying low and medium grade auriferous copper ore, with a 50' shaft and a 400' tunnel, planned to cut the vein at depth of 930'.

**VILLAGE BELLE GOLD & COPPER CO.**

COLORADO.

Office and mine: Walden, Larimer, Co., Colo. David Hendrickson, president and general manager; M. C. Ward, vice-president. T. John Payne, secretary and treasurer; preceding officers, George Pest and Thomas H. Sampson, directors. Organized July 16, 1902, under laws of Wyoming, with capitalization \$100,000, shares \$1 par. Lands, 4 claims, unpatented, reported by company as 150x300' in size, which would give an area of 4 acres, said to carry an 8' vein having ore averaging 15% copper and 7 oz. silver per ton, opened by a 100' shaft and 150' drift. Has a 20-h. p. steam hoist and a 25x64' mill.

**COMPÀNIA MINERA DE VIÑA DEL MAR.**

CHILE.

Office: Santiago de Chile. Mine office: Freirina, Atacama, Chile. Organized Feb. 8, 1905, under laws of Chile, with capitalization 60,000 pesos, shares 200 pesos par.

**VENDEEN-ARIZONA COPPER CO.**

ARIZONA.

Dead. Formerly at Kelvin, Pinal Co., Ariz. Described Vol. VII.

**VINDICATOR COPPER MINING CO.**

CALIFORNIA.

Letter returned unclaimed from former mine office, Greenwater, Inyo Co., Cal. Lands, east of Greenwater, were slightly explored, circa 1907. Idle and presumably moribund.

**VINDICATOR GOLD & COPPER MINING CO.**

UTAH.

Dead. Formerly at Umta, Weber Co., Utah. Described Vol. VII.

**VINSON CREEK GOLD & COPPER CO.**

OREGON.

Letter returned unclaimed from former mine office, Austin, Grant Co., Ore. Burton Miller, president and general manager. Organized circa January, 1908, with capitalization \$1,000,000. Lands, 4 claims, 5 miles from Austin, showing a strong vein, traceable about 2,000'; having a 25' shaft showing ore assaying 13.16 to 25.3% copper, with small gold values, and a tunnel planned to cut the vein at a depth of 400'.

**VIOLA GOLD & COPPER MINING CO.**

WASHINGTON.

Office: care of H. M. Kinneer, president, Spokane, Wash. Mine office: Leomin, Okanogan Co., Wash. A. J. Squires, vice-president; T. W. Brown, secretary and general manager; Arthur W. Lindsey, treasurer; preceding officers and Joseph Coleman, directors. Lands, 7 claims, area 140 acres, in the Galesia district, on the southern slope of Minas Mountain, 17 miles south of Leomin, showing a quartz-porphyry dike, carrying ore, giving good assay values in copper, lead, silver and gold. Presumably idle.

**VERGELINA MINING CO.**

VIRGINIA.

Mine office: Vergeline, Halifax Co., Va. Has gold and copper ores, with a 10-stamp mill.

**VIRGINIA-ARIZONA COFFEE CO.**

ARIZONA.

Office: Richmond, Va. Letter returned unclaimed from former mine office, Globe, Gila Co., Ariz. Jas. W. Graves, president; Julius A. Hobson, vice-president; Thos. Armstrong, secretary and treasurer. Organized March 18, 1907, under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Idle and apparently moribund.

**VIRGINIA BELLE GOLD & COPPER MINING CO.**

ARIZONA.

Dead. Lost lands, 1904, to Arizona Belle Mining Co. Formerly at Veil, Pima Co., Ariz. Described Vol. V.

**VIRGINIA BELLE MILLING & DEVELOPMENT CO.**

MONTANA.

Office: Seatale, Wash. Mine office: Cooke, Park Co., Mont. Organized circa January, 1908, to take over an old mine, formerly producing silver but latterly showing copper.

**VIRGINIA C. MINING, MILLING & SMELTING CO.**

MEXICO.

Office: 16 North Eighth St., St. Louis, Mo. Mine office: Conchelito, Rayón, Chihuahua, Mex. Col. Philemon Chew, president; Thos. B. Raines, vice-president and manager; preceding officers, W. W. Candy; R. H. Stevens and W. A. Clayton, directors. Organized under laws of Arizona with capitalization \$1,250,000, shares \$1 par. Lands, circa 75 miles from a railroad, include the Hidalgo mine, opened by 4 tunnels, the Santiago tunnel showing antiferous and argentiferous copper sulphides assaying 22.12% to 42.73% copper, 7.6 to 13 oz. silver and up to 40 cents gold per ton. Has steam power and plans a reduction plant.

**VIRGINIA CONSOLIDATED COPPER CO.**

MARYLAND &amp; VIRGINIA.

Office: 618 Walnut St., McKeesport, Pa. Mine offices: Libertytown, Frederick Co., Md., and Stony Man, Page Co., Va. W. Harry Hamilton, president; J. H. Lohman, vice-president; T. A. Robertson, secretary; George B. Humick, treasurer; Thos. A. Dunshee, general manager; C. C. Cramer, mill superintendent. Organized Oct. 15, 1901, under laws of New Jersey with capitalization \$1,000,000, shares \$1 par; issued, \$515,000.

Lands formerly were 1,070 acres, in 2 tracts, in Maryland and Virginia, but have been reduced to 64 acres of mineral lands, 3 acres of timber lands and a 6-acre millsite.

The Virginia tract, formerly 220 acres, freehold, on Hoak Mountain, has been reduced to 12 acres, and apparently there is a \$2,500 trust deed outstanding for that tract. The Virginia property formerly was said to show 3 parallel veins, traversing trap and quartzite, one of which, opened by a 320' shaft, with 950' of workings, was said to be of 18' average width, and to give average assays of circa 8% copper, 4 oz. silver and \$1.60 gold per ton, mainly from carbonate ores, with occasional occurrences of native copper. Equipment included a gasoline hoist and 3-drill air-compressor.

The Liberty mine, in Frederick county, Maryland, area formerly 850 acres, was held under a 20-year bond and lease, but holdings have been reduced to 52 acres of mineral land, 3 acres of timber land and a 6-acre millsite. The

**Liberty mine** is an old property, long idle, 45 miles S.E. of St. Louis, reported by company as deposits in limestone, apparently opened to depth of 30' only, showing malachite, mica-schist, chalcopyrite, bornite and tennantite, with values mainly in bornite, giving average assays of 2.10% copper, 4.7 oz. silver and \$1.80 gold per ton. Property was estimated, 1908, by management, to show 50,000 tons of ore. The Liberty mine, closed down, 1880, on account of the American Civil War, was reopened, 1888, for a short time only, and has not been a producer since.

Equipment of the Liberty mine includes a 65-h.p. weak plant, with hoist good for 1,000' depth, and a small stamp mill. Buildings include a 16x28' machine-shop, 20x28' carpenter-shop, 2 small smithies, an office and 5 dwellings. The old 60-ton wooden centrifugal crushers, 3 Wilfley tables and a sizer. Machinery for a new mill was bought of the Wellman-Beaver-Morgan Co., but the Virginia Consolidated Copper Co. being unable to pay for it, machinery was returned. Idle and apparently mothballed.

#### VIRGINIA COPPER CO., LTD.

**Office:** 136 Liberty St., NEW YORK, N. Y. **Mine:** HIGH HILL, Halifax Co., Va. Hon. Commodore P. Vedder, president; E. M. Davis, vice-president; Jas. B. Van Woert, secretary; Richard Lamb, general manager; Evan Davies, superintendent. Organized Aug. 30, 1908, under laws of Great Britain, with capitalization £300,000, shares £1 par. Lands, 1,617 acres, including the High Hill mines, in the Virginias district, developed by 8 shafts of 140' to 300' depth, with about one mile of workings. Property shows 3 veins, giving assays up to 5.50% copper, 2 oz. silver and 50 cents gold per ton, from highly siliceous ores. Has a 350-h. p. steam plant and concentrator. Idle several years.

#### VIRGINIA COPPER MINING & SMELTING CO.

ARIZONA.

Dead. Formerly at Casa Grande, Pinal Co., Ariz. Described Vol. VI.

#### VIRGINIA MINING CO.

IDAHO.

**Office:** 56 Vine St., Salt Lake City, Utah. Mine office: Baker, Lemhi Co., Idaho. Employes 5 men. M. B. Sewien, president; J. D. Pardee, vice-president; W. A. Byers, secretary, treasurer and general manager; preceding officers, J. B. Wardner and John Clark, directors. Organized 1904, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par; issued, \$900,000.

Lands, 12 claims, 8 partly patented, area 240 acres, in the Sand Creek district, showing slate, granite and porphyry, carrying 3 lussure veins, said to average 2' in width and to be traceable 6,000', showing chalcopyrite and galena assaying up to 7% copper, 2% lead, 2 oz. silver and \$25 gold per ton. Property is reported to have 3,000' of workings, with 7,000 tons of ore in sight. Equipment includes a 3-stamp mill. Company plans continuing development.

#### VIRTUE COPPER CO.

OREGON.

Mine office: Baker City, Baker Co., Ore. E. S. Platta, president; M. N. Thompson, vice-president; Grant Carroll, treasurer; A. W. Butler, secretary; preceding officers and Albert Backus, directors. The property shows copper ore.

#### VIRTUE MINING & DEVELOPMENT CO.

ARIZONA.

Office and mine: Paradise, Cochise Co., Ariz. Edw. P. Epley, president; Hugh Rowe, vice-president; Geo. A. Walker, secretary and treasurer. Organized August, 1908, under laws of Arizona, with capitalization \$1,000,000, shares \$2 par. Lands, 7 claims, area 140 acres, one-half mile from Portal and 6 miles from Patagonia, having a 200' tunnel.

#### MINA LA VIUDA.

CHILE.

Mine office: Algarrobo, Caldera, Atacama, Chile. Mine, opened 1878, shows, with its extension, large bodies of ore opened to depth of about 300 meters vertically, having a vein of about 7' average width, carrying high

grade chalcopyrite, below a depth of 280 meters. Vein dips at 45°. Production has been greatly hampered by poor transportation facilities, but owners have built about 40 kilometers of good wagon road to Caldera, and, 1906, built a 21-kilometer railroad to Caldera, at cost of 300,000 pesos, greatly reducing shipping costs. Employs circa 125 men, at daily wages of \$5 to \$7.50 pesos. Production, 1903, was circa 4,200 metric tons of ore averaging 11.8% copper, equivalent to an output of 992,590 lbs. fine copper.

**VIVANDIERE CONSOLIDATED MINING & SMELTING CO., COLORADO.**

Office: Chicago, Ills. Mine office: Turret, Chaffee Co., Colo. Lands, 5 claims, opened by a 615' shaft, showing concentrating ore. Has a steam plant, hoist, air-compressor and 50-ton mill, equipped with a crusher, Elspass mill and concentrating tables. Mine said to be under lease, expiring 1911, to a Leadville syndicate.

**VIVIAN & SONS.**

Office and works: Swansea, Glamorganshire, Wales. The Hafod works, at Swansea, dating from 1810, include smelters for treatment of gold, silver and copper ores, and a small electrolytic furnace. Firm also owns the Margam works, at Port Talbot, near Swansea, latter having rolling mills making copper, brass and yellow metal sheets, tubes and other finished products.

**COMPANIA MINERA VLAADIVOSTOCK DE COLLANUAHLI, CHILE.**

Office: Iquique, Chile. Mine office: Collahasi, Tarapacá, Chile. Organized March 31, 1906, under laws of Chile, with capitalization \$40,000 pesos, shares 16 pesos per.

**VOLCANIC COPPER MINING & SMELTING CO.** CALIFORNIA.

Dead. Formerly had an office at 356 South Broadway, Los Angeles, Cal.

**VOLCANIC MINE.** BRITISH COLUMBIA.

Mine office: Grand Forks, Boundary district, B. C. R. A. Brown, owner. Lands, 102 acres, on the north fork of the Kettle river, showing a great hill of cupriferous pyrrhotite. Vein, claimed to be 800' wide, shows small values in copper and gold near surface, with promise of better values at depth. Has an 890' tunnel, which has not yet reached the ore body. Property, though low in grade, is considered promising, because of vast size of its ore body.

**VOLCANIC MINING, SMELTING & DEVELOPMENT CO.** BRITISH COLUMBIA.

Dead. Formerly at Grand Forks, Boundary district, B. C. Described Vol. IV.

**VON GERMET COPPER, LTD.** CHILE.

Dead. Liquidated, October, 1905. Formerly at Antofagasta, Chile.

**VORTEX MINING CO.** IDAHO.

Letter returned unclaimed from former office and mine, Osburn, Shoshone Co., Idaho. Ira Griggs, president; John Pritchard, secretary; Stanley P. Fairweather, treasurer; Frank DeLong, superintendent. Lands, on Reservoir Creek, circa 3 miles from Osburn, have a 75' tunnel, showing a vein of about 25' width, and a lower tunnel of 360' length. Idle and presumably moribund.

**VULCAN CONSOLIDATED COPPER CO.** NEVADA.

Dead. Was succeeded by Nevada Vulcan Mining Co. Formerly at Soda Villa, Mineralda Co., Nev. Described Vol. IV.

**VULCAN COPPER CO.** OREGON.

Letter returned unclaimed from former office, San Francisco, Cal. Mine office: Takilma, Josephine Co., Ore. Company bought the property of the Mountain View Copper Co., for \$24,000. Mine is said to show a promising vein of bauxite. Equipment includes a 30-ton Vulcan smelter, reverberatory, blown in, Idle and presumably moribund.

**VULCAN COPPER MINING CO.** CALIFORNIA.

Office and mine: Dunsmuir, Siskiyou Co., Cal. Employs 15 men. John R. Lyle, president and general manager; Alvin J. Knight, secretary and treas-

urer. Organized Oct. 18, 1905, under laws of Oklahoma, with capitalization \$3,500,000, shares \$1 par; issued, \$500,000. Annual meeting, October 26.

Lands, 14 claims, 6 patented, area 250 acres, known as the Great Verde mine, between the Balaklala and Trinity mines, on Squaw Creek, 10 miles from Kennett, showing rhyolite and andesite, with an occasional gneiss. Property carries chalcopyrite disseminated in pyrite; estimated by company to average 3.5% copper, 2 oz. silver and \$8 gold per ton. Development is by 9 tunnels, of circa 1,500' length, showing occasional native copper and chalcopyrite up to 20% in claimed copper tenor. Diamond drilling, 1907, is claimed to have developed good sulphide ore, and company shipped, 1907, a little ore to the Kennett smelter.

#### VULCAN COPPER MINING CO.

WYOMING.

Office: Wausau, Wis. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. W. M. Monroe, president; W. D. Kellogg, secretary. Organized 1898, with capitalization \$1,000,000, shares \$1 par. Lands, 120 acres, in the Encampment and Battle Lake districts. Has 3 shafts, deepest about 100', showing a 15' sulphide ore vein. Idle some years and apparently moribund.

#### VULCAN COPPER MINING & SMELTING CO.

NEVADA.

Dead. Reorganized, 1901, as Vulcan Consolidated Copper Co. Formerly at Sodaville, Esmeralda Co., Nev.

#### VULCAN-ELY COPPER CO.

NEVADA.

Office: Commonwealth Bldg., Denver, Colo. Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. Geo. W. Wagner, president; S. H. Grove, vice-president; E. G. Smith, secretary and treasurer. Organized circa 1907, with capitalization \$5,000,000, shares \$1 par. Ely Trust Co., Ely, Nevada, registrar and transfer agent. Lands, 285 acres, in 2 groups of 95 and 190 acres, the smaller, adjoining the Pittsburg-Ely on the west, being claimed to have a good surface showing. Apparently no development undertaken. Presumably moribund.

#### VULCAN MINING, SMELTING & REFINING CO.

NEVADA.

Mine office: Cherry Creek, White Pine Co., Nev. P. A. Danaher, general manager. Mine, circa 30 miles from Ely, has copper and silver-lead ores, and, 1907, made frequent small ore shipments.

#### VULTURE PEAK COPPER CO.

ARIZONA.

Office and mine: Wickenburg, Maricopa Co., Ariz. Byron Smith, superintendent. Organized 1907. Lands, said to be extensive, which were in litigation until recently, are said to have a 3' vein carrying 17% copper ore, with ore assaying up to 51.8% copper, 8.5 oz. silver and \$8 gold per ton. Plans a 1,000-h. p. power plant, on the Hassayampa river, near Wickenburg.

#### WABASH COPPER MINES CO.

NEVADA.

Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. Lands, 18 claims, known as the Minnesota group, having a contact vein between limestone and granite, with a gneiss capping of 50' to 100' width, with several shallow pits, deepest 10', showing ore of 2 to 40% copper tenor.

#### WABASH MINING CO.

CALIFORNIA.

Letter returned unclaimed from former office, Los Angeles, Cal. Mine office: Letcher, Fresno Co., Cal. Dr. J. H. Bryant, president. Lands, 16 claims, adjoining the Copper King, opened by 2 shallow shafts, and tunnels of 300' and 400'. Idle several years and presumably moribund.

#### WABASH MINING CO.

UTAH.

Office: 521 Atlas Bld., Salt City, Utah. Mine office: Park City, Summit Co., Utah. Col. Nicholas Treweek, president and general manager; John E. Barnes, vice-president; W. Mont. Ferris, secretary and treasurer; preceding officers, John M. Daugherty and J. Leonard Birch, directors; G. M. Gillett,

**superintendent.** Organized under laws of Utah, and reorganized February, 1906, with capitalization \$2,000,000, shares \$5 par; issued, \$750,000. Has levied numerous assessments.

Lands, 320 acres, 140 acres freehold and 180 acres held under bond and lease. Has an 800' main shaft, with about 3 miles of workings, showing 6 veins, including a big new vein, cut on the 600' level, ores carrying mainly silver and lead values, with a little copper and gold. Is said to have expended circa \$500,000 on development. Employs 30 men. Property considered promising.

**WABUSKA COPPER CO.**

**NEVADA.**

Mine office: Wabuska, Lyon Co., Nev. J. E. McDermott, manager. Lands, 16 miles from Yerington, have 2 shallow shafts, deepest 120', showing a 20' contact vein between limestone and porphyry, carrying sulphide ore of 1 to 30% copper tenor. Has several mine buildings.

**WABUSKA COPPER MINES CO.**

**NEVADA.**

Mine office: Wabuska, Lyon Co., Nev. Was developing with a small force, at last accounts.

**WAGNER AZURITE COPPER CO.**

**NEVADA.**

Office and mine: Tonopah, Nye Co., Nev. Employs 10 men. Frank Everett, president and general manager; S. K. Bradford, vice-president; Baynard Lyon, secretary and treasurer; J. T. Spatt, superintendent. Organized July 15, 1907, under laws of Nevada, with capitalization \$2,000,000, shares \$1 par. Annual meeting, first Tuesday in November.

Lands, 16 claims, unpatented, area 320 acres, in the Wagner district, with two railroads within one mile, showing limestone, porphyry and rhyolite, said to give a good surface showing, opened by a 215' shaft. Equipment includes a 15-h. p. hoist and a 2-drill air-compressor.

**WAGNER-GREEN MINING & MILLING CO.**

**COLORADO.**

Dead. Formerly at Pearl, Larimer Co., Colo.

**WAHNITA COPPER MINING CO.**

**MICHIGAN.**

Dead. Was fraudulent. Name changed to Erie Consolidated Mining & Reduction Co. Formerly at Matchwood, Ontonagon Co., Mich. Fully described Vol. II.

**WAHSATCH MINING CO.**

**UTAH.**

Office: 2206 Lincoln Ave., Ogden, Utah. Mine office: Brigham City, Box Elder Co., Utah. H. C. Baker, president and general manager; J. W. Abbott, vice-president; H. R. Wadleigh, secretary. Organized April, 1904, under laws of Arizona, with capitalization \$1,500,000, shares \$5 par, stock issue being divided into 5% cumulative preferred and common shares.

Lands, 505 acres, patented, on the western slope of the Wahsatch Mountains, 4 miles from Brigham City. Mine, as opened, carries mainly lead and silver values, but the company has copper deposits in a prospective stage. Equipment includes a 150-ton concentrator, connected with the mine by a 4,200' aerial tram. Water is piped to the mine and mill under a considerable head, estimated to be capable of generating 180 h. p. Presumably idle.

**WALCOTT COPPER MINING CO.**

**WYOMING.**

Office and mine: Walcott, Carbon Co., Wyo. W. C. Sammons, C. A. Hansen, W. W. Petty, O. O. Shields, F. A. Raynor, A. C. Wagner and J. R. Dodd, directors. Organized circa January, 1907, with capitalization \$1,000,000.

**WALDO SMELTING & REFINING CO.**

**OREGON.**

Office: P. O. Box 1487, Colorado Springs, Colo. Mine office: Takilma, Josephine Co., Ore. Chas. L. Tutt, president; K. H. Babbitt, vice-president; Spencer Penrose, secretary and treasurer; J. A. Hull, assistant secretary and treasurer; preceding officers, J. A. Hayes, J. O'B. Gunn and Col. T. Walm Morgan Draper, directors; E. W. Walter, general manager. Organized Dec.

3, 1901, under laws of Colorado, with capitalization \$3,000,000, shares \$100 par. Is under same management as Takilma Smelting Co., and owns a share interest therein.

Lands, 20 patented claims, area 400 acres, with millsite, also 650 acres of placer lands, near the Queen of Bronze mine, showing 5 fissure veins, of about 10' average width, carrying sulphide ores of 12% copper and \$8 gold average values. Has a shaft and 3 tunnels. The Copper King shaft, about 200' deep, has an 85' crosscut-drift, showing a good ore body. The 700' Lyttle tunnel and the 400' No. 2 tunnel, on the same claim, show good ore bodies. The 310' Cowboy tunnel connects with the incline shaft, 160' below surface, and is to be extended to intersect known ore bodies. Property is about 40 miles from the Southern Pacific railroad. Officers of the company are men of standing, with long and successful mining experience, and the property is considered promising.

#### **GEWERKSCHAFT WALDSTOLLN.**

GERMANY.

Dead. Formerly at Dernbach, Weimar, Germany. Described Vol. VII.

#### **WALES COPPER MINING CO.**

ALASKA.

Dead. Merged, 1904, in Hadley Consolidated Copper Co. Formerly at Hadley, Prince of Wales Island, Alaska. Described Vol. IV.

#### **WALKER LAKE COPPER-GOLD CO.**

NEVADA.

Office: 305 Clay Peters Bldg., Reno, Nev. Mine office: Dutch Creek, Esmeralda Co., Nev. E. R. Dodge, president; E. C. Harris, vice-president; G. H. Cramer, secretary and treasurer; preceding officers, B. H. Long and Michael Knopf, directors. Lands, 34 claims, area 680 acres, in 8 groups, fairly timbered and watered, in the Walker Lake and Mount Grant districts, having an 85' shaft showing auriferous and argentiferous copper ore.

#### **WALKER LAKE COPPER MINING & SMELTING CO.**

NEVADA.

Office: 404 Empire Bldg., Denver, Colo. Mine office: Hawthorne, Esmeralda Co., Nev. Organized early 1907, under laws of Arizona, with capitalization \$1,000,000. Lands, 4½ miles east of Walker Lake, are claimed to show a 2' vein of ore assaying 0.8% copper at depth of 9'. Is not regarded favorably.

#### **WALKER LAKE EXPLORATION & DEVELOPMENT CO.**

NEVADA.

Mine office: Hawthorne, Esmeralda Co., Nev. Frank House, general manager; Andrew Bain, superintendent. Lands, on Cat Creek, 8 miles from Hawthorne, show a vein of 9' estimated average width, carrying native copper.

#### **WALKER LAKE INDIAN RESERVATION MINING CO.**

NEVADA.

Office: care of Wm. H. Wilson Co., fiscal agents, Goldfield, Nev. Mine office: Dutch Creek, Esmeralda Co., Nev. G. R. Potter, president; J. L. Lindsay, treasurer; Francis D. Adams, secretary. Capitalization \$1,000,000. Lands, 3 lode claims, area 60 acres, and 160 acres of placer claims, west of Walker Lake, said to show a dike carrying ore assaying 10 to 20% copper, with small gold and silver values. Apparently no development undertaken.

#### **WALLACE & MISSOULA MINING CO., LTD.**

MONTANA.

Office: Wallace, Idaho. Letter returned unclaimed from former mine office, Nine Mile, Missoula Co., Mont. P. M. Riley, president; J. H. Scott, vice-president; Edw. Blackman, treasurer; preceding officers, Jos. Thomas and Jas. A. Wayne, directors. Organized 1907, under laws of Idaho, with capitalization \$1,000,000, shares \$1 par.

#### **WALLACE COPPER CO.**

ARIZONA.

Mine office: Wickenburg, Maricopa Co., Ariz. J. C. Dobbins, superintendent. Lands, 160 acres, patented, in the Bradshaw Mountains, having a 260' shaft. Formerly employed up to 50 men. Presumably idle.

**WALLAROO CENTRAL COPPER MINING SYNDICATE.** **SOUTH AUSTRALIA.**

Mine office: Kadina, Daly Co., South Australia. Property is the Bingo mine, having a shaft of circa 100' depth. Diamond drilling has shown copper sulphides.

**WALLAROO EXTENDED COPPER MINING CO., LTD.** **SOUTH AUSTRALIA.**

Mine office: Wallaroo, Daly Co., South Australia. Lands, 196 acres, 3 miles west of Kadina, adjoining the western boundary of the Wallaroo mine. Property has numerous pits and trenches, from early-day prospecting, and No. 1 shaft, 96' deep, shows, at 75' depth, a 4' vein, supposedly an extension of the Wallaroo, carrying disseminated bornite and chalcopyrite.

**WALLAROO & MOONTA MINING & SMELTING CO., LTD.** **AUSTRALIA.**

Office: Steamship Bldgs, Currie St., Adelaide, South Australia. Mine offices: Wallaroo, Daly Co., South Australia, and Moonta, Daly Co., South Australia. Works office: Port Wallaroo, Daly Co., South Australia. Employed 2,553 men, Jan. 1, 1907, and 1,573 men June 30, 1908, of whom 738 were at Wallaroo, 494 at Moonta and 341 at Port Wallaroo. Jas. Harvey, chairman; preceding officer, Sir J. Lancelot Stirling, Sir R. C. Baker, Simpson Newland and Hon. J. J. Duncan, directors; David Davidson, secretary; H. Lipson Hancock, general manager; Jas. Pryor, assistant general manager; Union Bank of Australia, Ltd., bankers; Elder, Smith & Co., Ltd., London agents.

Organized 1899, under laws of South Australia, as a merger of the Moonta and Wallaroo companies, with capitalization £400,000, shares £2 per; issued, £320,000. To end of 1907 paid 30 dividends, aggregating £444,000, dividends being £80,000 in 1906 and £140,000 in 1907. The Wallaroo company, previous to the merger, produced copper to the value of £2,229,096, paying dividends of £430,254, therefrom, and the Moonta company, before the merger, produced copper to the value of £5,396,146, paying dividends of £1,168,000 therefrom, giving the property a total dividend record, to Dec. 31, 1907, of £2,042,254. Gross profits, 1907, were £49,835 6s. 4d., company ending the year with balance of assets of £112,081 5s. 4d. Liberal allowances are made yearly for depreciation, amounting, 1906, to £15,142 17s. 7d., with total allowance for depreciation, to end of that year, of £142,873 18s. 9d.

Lands are extensive, including the Wallaroo and Moonta groups, about 10 miles apart, with various smaller properties, and site of the reduction works, at Port Wallaroo, all in the Yorke Peninsula, on Spencer Gulf. The Wallaroo mine was discovered 1860, and the Moonta 1861, and both mines have been operated, practically continuously, since 1863.

The mines use waste rock for filling, and, 1907, sent underground 40,000 long tons of tittle, for filling depleted stopes. The properties suffer from air-blasts, similar to those of the Lake Superior copper mines, though only slight earth-shocks are experienced. Cornish pumps have been replaced by Bellis & Marcom electric pumps. During 1907 the mines made 5,675' of new openings, and the management very wisely took advantage of two years of high prices for copper to make extensive underground development, and to add largely to surface equipment. The mines having been opened nearly half a century ago, when mining practice was crude, there are entirely too many shafts for economical ore extraction, and the policy of the present management has been, and continues to be, for a reduction of the number of working shafts, and greatly increased hoisting capacity for such shafts as are retained in commission.

The Wallaroo group, 6 miles east of Port Wallaroo, includes the Kukilla, an adjoining property, the entire tract having an area of circa 2,000 acres. The property shows schists and slates, mainly metamorphosed mica-schist,

carrying 6 practically parallel veins, with ESE. strike, dipping quite uniformly at 60° NW., veins ranging 6' to 33' in width, opened for about one-half mile in length, and to depth of circa 2,000'. The gossan showed a little atacamite and carbonate ores, succeeded by a leached zone of 35' to 40', followed by native copper, cuprite, melaconite, azurite, malachite and chalcopyrite, but the oxidized ore bodies were worked out, many years ago. At depth the ore is mainly chalcopyrite, associated with pyrite, hematite and occasional molybdenite, with quartzose gangue containing calc-spar and some schistose country rock. Ore is slightly auriferous and argentiferous, and ranges 2 to 4% in copper tenor, as mined, but is hand-cotted, and concentrated about 4 into 1, before sent to the smelter. The mine maintains good average values in the deepest workings. Ore is won mainly by overhand stoping, and wide stopes are timbered by wooden pillars, with waste filling on either side of the drifts.

The Wallaroo and Kurilla mines, jointly, have about 30 shafts, mainly inclined on the veins, with circa 35 miles of workings, many of the shafts being old and abandoned. Operating shafts hoist with 2-ton and 3-ton skips, the principal shafts being Taylor's, Young's, Office, Boor's and Elder's.

Taylor's shaft, 2,282' deep, is the principal opening. The old shaft was badly injured by fire, January, 1904, and was replaced by a new vertical shaft from surface, connecting with the lower levels of the old workings. The fire did much damage, destroying the pumping apparatus to a depth of 2,000', but, by heroic efforts, pumps were installed with compressed air power, since replaced by electric pumps. Extensive storage-bins were installed, 1908, between various levels in Taylor's shaft.

The Office shaft is 1,976' in depth. Young's shaft is 1,858'. Boor's shaft has been equipped with a big Waddle fan, the suction exhausting foul air from the mine, this scheme of ventilation rendering stoping possible where otherwise work would be out of the question.

The Kurilla mine, opened to depth of 1,176' on a vein parallel to the main vein of the Wallaroo, has an ore body of 10' to 12' width, which is bunchy, carrying high-grade chutes of ore averaging about 11% in copper tenor, after hand-cobbing. The Kurilla is practically a portion of the Wallaroo mine.

The Moonta group, including the Moonta, Moonta Central and North Yelta miles, has an area of 2,673 acres, leasehold from the crown. Country rock is felsite-porphry, closely joined; with jointing planes usually showing a green amphibolic coating. The porphyry does not outcrop, but is covered by silicious limestone containing circa 15% silica, which weathers into spherical masses. The Moonta has 27 veins, of 6" to 20' width, with 5 practically parallel main veins, having a general average strike of N. 30° E., with numerous stringers and laterals, there also being 2 series of cross fissures. The 5 veins worked, in hard felsite-porphry, showed considerable atacamite in the upper workings, succeeded by a barren zone of 60' to 125', below which were oxidized ores, succeeded by chalcopyrite and occasional bornite, associated with pyrite, with quartz gangue. The Moonta ores are rich, and for years averaged 20% in copper tenor, after hand-cobbing, but are now dressed to about half that tenor only.

The Moonta has 21 trial shafts and 56 working shafts, so-called, having been opened in a period when mining practice was vastly different from that of the present day, consequently most of the working shafts have been abandoned, and extraction is mainly through Taylor's shaft and Treuer's shaft, the mine being opened to depth of 1,720'. Most of the shafts are vertical, for a short distance, thence are deflected to follow the dip of the veins, and the mine has upwards of 40 miles of underground workings, mining being by both overhead and underhand stoping.

The Moonta Central mine was unwatered, 1907, to the 180-fathom level,

workings being found in good shape, and the mine produced some fluxing ore, but was closed down, April, 1908, and allowed to fill again.

The North Yelta mine is opened by a main shaft, deepened 120' in 1907, but work was stopped, November, 1907, and the mine allowed to fill.

Equipment formerly included a great number of small, isolated machinery plants, all more or less antiquated in design, and uneconomical in operation. For some years the efforts of the management have been bent toward the consolidation of separate plants, wherever possible, and their replacement by larger and more modern installations. The new central power plant at the Wallaroo, enlarged 1907, has effected a very great saving in operating costs. Some trouble was had, 1907-1908, owing to the poor supply of Beetaloo water.

Buildings include a large number of shops and engine-houses, with large and commodious changing-houses, the principal shafts having shower-baths and lockers.

Transportation is furnished by the government railway, which connects both the Wallaroo and Moonta mines with the reduction plant at Port Wallaroo.

There are concentrators at both groups of mines, and the process followed at each is essentially the same, the exceptional weight and flaky nature of the gangue rendering concentration exceedingly difficult, but the various metallurgical problems have been met and conquered by persistence and technical skill. At the shafts ore is dumped on grizzlies, passing to bins for various sizes, whence drawn off to railway trucks, and carried to the concentrators. At the mills, after wet crushing, material goes to revolving trommels, from which oversize goes to a traveling belt, whence ore is picked by boys, and passes through crushers, with water. Ores passing a  $\frac{5}{8}$ " mesh are treated on specially designed Hancock jigs, and raggings passing  $\frac{7}{8}$ " and  $1\frac{1}{4}$ " meshes are treated separately, on other specially designed Hancock jigs, while material rougher than  $1\frac{1}{4}$ " is hand-picked from the traveling belt. The well-known Hancock jig, now in use throughout the world, was designed by H. R. Hancock, the former general manager, for the use of these mines. The largest jigs at the Wallaroo and Moonta mines treat 25 tons of material hourly. About 12 to 15% of the material handled is slimed, slimes going to spitzkasten, for classification and distribution to round tables and vanners, which turn out a product of circa 12% copper tenor.

The Devon mill, at the Wallaroo mine, was enlarged, 1907, by the addition of 5 Ball mills and 6 Card tables, and, 1908, was given one new transmission cable and 2 additional 100-h. p. motors, with a belt-conveyor for stacking tailings from the Wilfley and Card tables.

Coarse material and tailings from the wash are piled in heaps, weathered and leached. Heaps range 20' to 60' in height, the tops of the piles of coarser material being laid out in terraces. Ore-heaps are systematically sprinkled, and leach-liquor, carrying 60 to 120 grains of copper per gallon, runs to vats. The leach-heaps cover about 30 acres, and contain upwards of 1,000,000 tons of tailings, a considerable length of time being required for complete oxidation and thorough leaching.

Fine wastes and slimes go to a specially designed leaching plant, and are passed through a series of vats containing leach-liquor, 12 to 20 lbs. of sulphuric acid being added to the leach-liquor for each ton of slimes treated. The slimes in the vats are agitated by revolving arms, the pulp, after agitation, passing to settling dams and clarifying reservoirs. The leach-liquor is drawn off, in earthen-pipes, to the main precipitating works, where it joins the liquor from the various tailings heaps, and copper is precipitated therefrom on scrap-iron. The material from the settling dams is weathered and given a second, and occasionally a third, leaching. The average production

of precipitate from these plants is 15 to 20 long tons weekly. In addition to precipitate, the leaching plant makes considerable bluestone.

The smelter, at Port Wallaroo, does considerable custom work, in addition to treating the company's ores, production, 1907, from custom ores and mattes, amounting to 1,722 long tons, 17 cwt., 23 lbs. blister copper. The works have one large and one small blast-furnace, No. 1 furnace having been rebuilt, 1907, and there are 4 refining furnaces. The works have ore-sintering pots for sintering flue-dust from the blast-furnaces in connection with raw ore, and sintered flue-dust is turned mainly into bluestone. Product of the works is a blister copper of exceptional purity, the "Wallaroo" brand of metal having a deservedly high standing among critical consumers. Copper is sold through Aron Hirsch & Sohn, under a 3-year contract, renewed 1907. Slags are granulated and sent back to the mines, for underground filling, this property apparently being the first ever to make such use of slag. The power plant at the smelter has 2 Samuelson's blowers, and a Bellis & Morcom engine, with Babcock & Wilcox boilers and a large coal gantry, added 1907. At the works the company has a private railway, larger locomotives having been added, 1907.

In connection with the smelter are acid works and a bluestone plant, latter rebuilt, 1907. The acid plant, of about 20 tons daily capacity, utilizes fumes from the smelter, furnishing sulphuric acid for the lixiviation works at the mines, and, in addition sells considerable commercial acid. Production of acid, 1907, was 5,378 long tons, made at a cost of 17s. 4d. per long ton.

Labor conditions at the mines and works of the Wallaroo & Moonta are among the best to be found in Australia, where, as a rule, relations are decidedly strained between employer and employee. The company keeps faith implicitly with its men, and is awarded by unusual loyalty on the part of its workmen. Underground work is done mainly on contract, and there is a sliding scale of wages, by which bonuses are added automatically, as copper advances, and are cut off in the same manner on a declining market. The company sells houses to its men, on time, giving them easy terms, and maintains a library and reading-room, well supplied with books and periodicals. The company also has helped to improve living conditions by the construction and maintenance of parks, fostering of musical organizations, and in a variety of other ways, all of which are commendable, and all of which are appreciated by those benefited.

To Dec. 31, 1904, the present company had produced copper to the value of £4,281,342, and total value of production of mines to that date was £12,245,554. Recent production has been as follows: 14,563,097 lbs. fine copper, in 1905; 16,936,640 lbs. fine copper, 327 long tons bluestone, 8,250 oz. silver and 2,326 oz. gold, in 1906; 19,314,480 lbs. fine copper, 223 long tons bluestone, 5,845 oz. silver and 2,009 oz. gold, in 1907. For first half of 1908 production was 2,558 long tons copper, and for year probably was circa 12,000,000 lbs. fine copper. In 1907 the mines yielded 229,674 long tons of material, averaging 3.59% in copper tenor, of which the Wallaroo group furnished 151,977 tons, and the Moonta 77,697 tons. Of the 1907 production, 46,045 tons was called waste, 72,531 tons smelting ore, and 109,507 tons leaching ore. The Wallaroo mines yielded 55,129 long tons of ore, averaging 8.01% copper, returning 4,419 long tons finished copper, and 36 long tons precipitate that yielded 25 long tons finished copper, and the Moonta mines yielded 16,924 long tons dressed ore averaging 10.66% copper tenor, returning 1,804 long tons fine copper, and 835 long tons precipitate that yielded 649 long tons fine copper. Material smelted, 1907, was 75,666 long tons, including ore, matte and regulus, with a recovery of 82.59% of values by wet assay.

Cost per long ton of finished copper, 1906, was £72 11s. per long ton,

equal to 15.7 cents per pound, but costs were abnormally high in that year, owing to improvements. Like all other copper mines, costs are increasing, unavoidably, due primarily to increased wages, and partially to increased cost of material. The shareholders voted increased remuneration to the directors, March, 1907, but, at the end of that year, the directors voluntarily reduced their compensation to the former figures, on account of greatly decreased earnings, due to the metal market, thereby setting a valuable example, and proving themselves gentlemen of exceptional probity. The mines are good, the management is highly progressive, and the directors are to be commended for the exceedingly full and informing reports that they furnish to their shareholders.

**WALL STREET COPPER & GOLD MINING CO. MONTANA.**

Mine office: Boulder, Jefferson Co., Mont. Property shows ore assaying 18% copper and 7 oz. gold per ton.

**WALTHAM MINE, LTD.**

**COLORADO.**

Office: 155 Fenchurch St., London, E. C., Eng. Mine office: Russell Galeh, Gilpin Co., Colo. Dr. J. H. Gower, managing director; W. F. Coot, secretary. Organized June 16, 1903, with capitalization, £25,000, shares £1 par. Lands include the Waltham mine, carrying gold, silver and copper ores. Idle some years and presumably moribund.

**WANDILTA COPPER MINES, LTD.**

**AUSTRALIA.**

Office: 69 Moorgate St., London, E. C., Eng. Mine office: Kadina, Daly Co., South Australia. A. S. Caine, chairman; J. A. Russell, secretary. Lands, 140 acres, including the Wandilta mine, having a 2' to 3' vein, opened by a 240' shaft, with limited development. Idle some years and moribund.

**WAPITI MINING CO.**

**COLORADO.**

Office: 932 Equitable Bldg., Denver, Colo. Letter returned unclaimed from former mine office, Wapiti, Summit Co., Colo. Ores carry gold, silver, lead and copper. Has a small concentrator. Idle and apparently moribund.

**WARATAH MINE.**

**AUSTRALIA.**

Mine office: Grafton, N. S. W., Australia. Mine, at Fine Flower, near Grafton, has, at 30' depth, a vein of 4' 6" width carrying azurite and malachite.

**WARATAH SMELTER.**

**AUSTRALIA.**

Owned by English & Australian Copper Co., Ltd.

**WAR EAGLE CONSOLIDATED MINING &  
DEVELOPMENT CO., LTD.**

**BRITISH COLUMBIA.**

Office: 49 Wellington St. East, Toronto, Ont. Mine office: Rossland, Trail district, B. C. Geo. Gooderham, president; T. G. Blackstock, vice-president; preceding officers, W. G. Gooderham, A. E. Gooderham, Geo. T. Blackstock, W. H. Beatty, Chas. R. Hansver and James Cronin, directors; E. B. Kirby, general manager; Carl R. Davis, superintendent; Chas. B. Jenkins, clerk and purchasing agent. Organized January, 1897, under laws of British Columbia, with capitalization \$2,000,000, shares \$1 par; issued, \$1,750,000. Paid dividends of \$544,250, June, 1898, to February, 1906, with no dividends since. Is controlled, through stock ownership, by Consolidated Mining & Smelting Co. of Canada, Ltd.

Lands include the War Eagle, Richmond, Crown Point and other claims, carrying auriferous and argentiferous copper ores.

Like all other mines of the Rossland district, ore of the War Eagle is much lower in grade at depth. Is operated in connection with the Centre Star, mines being connected on several lines. Shipments, during 1905, were 60,860 tons, of \$890,269.21 gross value, giving an average of \$11.34 per ton, from which the company received, after deducting freight, smelting, refining and marketing charges, an average of \$5.22 per ton. Production, 1907, estimated at 1,850,000 lbs. fine copper.

**WAR EAGLE COPPER-GOLD MINING CO. BRITISH COLUMBIA**

Dead. Lands sold, 1906, to Phoenix Amalgamated Copper Mines, Ltd. Formerly at Phoenix, Boundary district, B. C.

**WAR EAGLE MINE. YUKON.**

Mine office: White Horse, Yukon, Canada. Shipped a little high-grade bornite, 1905. Presumably idle.

**WARRA DIVIDEND CO., LTD. SOUTH AUSTRALIA.**

Office: 29 Grenfell St., Adelaide, South Australia. Mine office: Hergott Springs, South Australia. Hon. Frank Johnson, chairman; F. Stevens, secretary and treasurer. Organized January, 1907, under laws of South Australia, with capitalization £4,000, shares 10s. par, 9s. paid in; issued, £3,977. Annual meeting, in October.

Lands, 160 acres, leasehold from the crown, in the Hergott district, known as the Warra Warra mine, showing kaolinized and indurated slates, sandstone and quartzite, in alternate strata, carrying native copper in fine particles, cuprite, malachite, chalcocite and chalcopyrite. Main ore body is reported as averaging circa 50' in width, and traceable one mile, carrying ore assaying 3 to 8% copper, hand-cobbled to an average tenor of 36% for shipment. Development is by vertical shafts of 60', 65', 80', 108' and 266', and by tunnels of 80', 110' and 160'.

Property was under development by the Tasmanian Copper Co., Ltd., but was abandoned, and has been taken back by the owners, who are planning to raise additional capital required for development.

**WARRA WARRA PROPRIETARY COPPER MINES, N. L. SOUTH AUSTRALIA.**

Dead. Lands sold, January, 1907, to Warra Dividend Co., Ltd. Formerly at Hergott Springs, South Australia.

**WARREN DEVELOPMENT CO. ARIZONA.**

Dead. Name changed, 1905, to Warren District Development Co. Formerly at Bisbee, Cochise Co., Ariz.

**WARREN DISTRICT DEVELOPMENT CO. ARIZONA.**

Office: care of C. D. Hanchette, treasurer, Hancock, Mich. Mine office: Bisbee, Cochise Co., Ariz. John Funkey, president; J. A. Fuller, secretary. Organized 1903, under laws of Michigan, with capitalization \$100,000, shares \$10 par; issued, \$16,000. Lands, 12 claims, area 200 acres, adjoining the Higgins group. Idle since organization.

**WARREN REALTY & DEVELOPMENT CO. ARIZONA.**

Office: 510 Lyceum Bldg., Duluth, Minn. Mine office: Bisbee, Cochise Co., Ariz. Henry B. Hovland, president; Thomas F. Cole, vice-president and treasurer; Charles A. Duncan, second vice-president; Frederic R. Kennedy, secretary; Daniel R. Smith, assistant secretary; William G. Hegardt, assistant treasurer; Col. L. W. Powell, general manager.

Organized June 29, 1905, under laws of Arizona, with capitalization \$900,000, shares \$15 par; paid in, \$12. Controls, jointly with Superior & Pittsburg Copper Co., the Warren Co., with capitalization \$665,000, owning the townsite of Warren, and various public utilities therein. Annual meeting, second Tuesday in April.

Lands, circa 1,700 acres, in the Warren district, all of possible mineral worth, but held mainly for surface values. Lands include the Cunningham group, and former holdings of the Calumet & Cochise Development Co., 3 claims of latter being of promise. Considerable diamond drilling was done, 1907, and a shaft started, 1905, on the Lone Star claim, circa 2½ miles southeast of the Junction shaft of the Superior & Pittsburg. The 3-compartment Lone Star shaft, 815' deep, October, 1908, may find ore, it is thought, at a depth of circa 2,000'. Management is good, and property valuable, primarily

for surface rights, and secondarily for the chances of making a mine on three of the Calumet & Cochise claims.

#### **WARRIOR COPPER CO.**

**ARIZONA.**

Office: 316 Crozer Bldg., Philadelphia, Pa. Mine office: Black Warrior, Gila Co., Ariz. E. M. White, superintendent; J. A. Gamble, chief clerk. Organized March 10, 1906, under laws of Delaware, with capitalization \$1,600,000, shares \$10 par, in \$750,000 cumulative 7% preferred stock, and \$850,000 common stock, as successor of Black Warrior Copper Co., Amalgamated, which came to grief financially.

Lands, circa 1,500 acres, in 3 groups, known as the Gold Gulch, Diamond H and Montgomery, latter including the Montana and Dadeville mines, adjoining claims, opened by tunnels of circa 1,000' and 1,200', with about 3,000' of workings, 1906, the lower tunnel showing a vein of circa 40'-estimated average width, carrying ore estimated at 10% average copper tenor, which estimate is considered excessive, ore being silicious, and apparently averaging up to 6% copper. The mine has a steam plant, burning petroleum.

Reduction plant includes a 100-ton concentrator, 300-ton leaching plant and 50-ton matting furnace. The leaching plant, in a 62x130' building, has six 50-ton tanks, each 20x25x5', heated by steam coils to facilitate lixiviation. Crushed ore is delivered to the tanks from a railroad track running above, planned to be replaced by a belt-conveyor.

Production, 1907, was 1,397,612 lbs. fine copper and 325 oz. silver. Old management was poor, but apparently present management is securing better results.

#### **WARRIOR MINING CO.**

**COLORADO.**

Office: 622 Main St., Peoria, Ills. Mine office: Fort Garland, Costilla Co., Colo. Dr. L. D. Forman, president; Dr. W. M. Swartz, secretary; A. W. Reagal, treasurer. Organized September, 1902, under laws of Arizona, with capitalization \$2,500,000, shares \$1 par. Lands, 9 claims, area 180 acres, in the West Blanca district, claimed to show ore assaying up to 12% copper, 20 oz. silver and 2 oz. gold per ton, but from another source it is learned that at last accounts the company had not found ore in place, though the property is considered fairly well located. Out of cash and credit, and idle.

#### **WARBOO GOLD & COPPER CO., N. L.**

**AUSTRALIA.**

Office: Sydney, N. S. W., Australia. Mine office: Stanthorpe, Queensland, Australia. Organized 1908, under laws of New South Wales, with capitalization £10,000, shares £1 par. Lands, 50 acres, leasehold, in tracts of 10 and 40 acres, latter having a 50' shaft showing a 3' vein of pyritic quartz carrying a little gold. The 10-acre lease has a 110' shaft showing a 3' to 4' vein carrying ore assaying 8% copper and 1 oz. 6 dwts. gold per long ton. Plans a smelter.

#### **WASATCH CONSOLIDATED MINING CO.**

**UTAH.**

Dead. Formerly at Milford, Beaver Co., Utah.

#### **WASATCH COPPER CO.**

**UTAH.**

Office: First National Bank Bldg., Ogden, Utah. Letter returned unclaimed from former mine office, Brigham City, Box Elder Co., Utah. David S. Tracy, president; Lee Harris, secretary and treasurer; W. D. Pyper, general manager; preceding officers, N. J. Harris, Alex Taylor, Harley Taylor and Caleb Parry, directors. Organized May 14, 1906, under laws of Utah, with capitalization \$600,000, shares \$1 par. Lands, 7 claims, area 140 acres, circa 3 miles north of Brigham City, having a 75' tunnel and 75' incline shaft, latter showing auriferous iron ore and copper. Idle.

#### **WASATCH COPPER MINING CO.**

**UTAH.**

Office: care of J. L. Ross, president, Denver, Colo. Organized October, 1906, under laws of Arizona, with capitalization \$1,200,000. Lands, said to be

circa 200 acres, somewhere in the Pinto iron district of southern Utah, are claimed to show a 150' vein, traceable for several hundred feet, opened by a 35' shaft, carrying ore assaying up to 40% in copper tenor. Presumably idle.

**WASATCH KING MINING CO.****UTAH.**

Office: Troy, N. Y. Mine office: Milford, Beaver Co., Wash. Joseph Leggett, president; Geo. E. DeFreest, secretary. Organized 1905, under laws of Utah, with capitalization \$300,000, shares \$1 par. Lands, 6 claims, area 120 acres, including the Wasatch King mine, near the Majestic, 10 miles northwest of Milford, opened by a 560' tunnel. Presumably idle.

**WASATCH MINING & MILLING CO.****UTAH.**

Dead. Merged, Sept. 1, 1908, in Utah United Copper Co. Formerly at Milford, Beaver Co., Utah.

**WASHINGTON-ARIZONA MINING CO.****ARIZONA.**

Mine office: "Poland, Yavapai Co., Ariz. Mark Bradley, superintendent. Lands include the Express mine, in the Big Bug district, formerly held by those notorious mining fakers, Douglas, Lacy & Co. Mine has an 800' tunnel, cutting a vein of auriferous copper ore with back of 480'. Shipped, 1906, circa 200 tons of ore. Presumably idle.

**WASHINGTON CO-OPERATIVE MINING SYNDICATE.** **WASHINGTON.**

Mine office: Fairfax, Pierce Co., Wash. Lands, 2 claims, 17 miles by trail from Fairfax, said to show a 25' vein, with 3' paystreak carrying disseminated chalcopyrite, assaying 5 to 33% copper, 5 to 8 oz. silver and \$2 gold per ton. Has an available water-power. Was in hands of a receiver, until company's coal lands, near Fairfax, were sold to the Western Iron, Coal & Coke Co. Idle for several years and apparently moribund.

**WASHINGTON COPPER & MILLING CO.****WASHINGTON.**

Dead. Was a rank fraud, promoted by the notorious L. E. Pike & Co., who are still permitted, by the federal postal department, to peddle worthless "mining" shares to the credulous public. These swindlers advertised the mine to be "the richest copper property in the United States, with even more flattering prospects than the Calumet & Hecla or United Verde." The "mine" consisted of 50' shaft, bottomed in gravel. Formerly at Eatonville, Pierce Co., Wash.

**WASHINGTON COPPER MINING CO.****MICHIGAN.**

Office: 42 Broadway, New York, N. Y. Operating office: care of Keweenaw Copper Co., Hancock, Houghton Co., Mich. Mine office: Delaware Mine, Keweenaw Co., Mich. Chas. A. Wright, president; Spencer R. Hill, vice-president; Chas. A. Wright, Jr., secretary and treasurer; preceding officers and Capt. Thos. Hoatsen, directors. Organized under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; issued, \$1,500,000. Is controlled, through stock ownership, by Keweenaw Copper Co. Annual meeting, fourth Tuesday in March.

Lands, 1,050 acres, on the western shore of Mosquito Lake, on which desultory work has been done, at intervals, in the past. Idle since 1901, with no plans for resumption in near future.

**WASHINGTON-IOWA COPPER MINING CO.****WASHINGTON.**

Mine office: Index, Snohomish Co., Wash. Property lies on the east fork of Silver Creek, 2 miles above Mineral City, adjoining the Edison Mining & Development Co., and both properties are worked under one management, development being through the 880' Bonanza tunnel, which has crosscut 4 veins, and is expected to cut 5 additional ore bodies, at depths ranging to 800' vertically.

**WASHINGTON SMELTING & REFINING CO.****WASHINGTON.**

Works office: Keller, Ferry Co., Wash. Organized 1904, with capitalization \$1,000,000, shares \$5 par, to build a smelter, at West Fork, on the Samm

Poil river, 15 miles south of Republic, to treat the ores of the Belcher Mining Co. and adjoining properties. No trace of operations.

**WASHINGTON SONORA GOLD & COPPER CO.** MEXICO.

Office: care of A. Sandoval, treasurer, Nogales, Sonora, Mex. Mine office: Magdalena, Sonora, Mex. A. L. Lewis, president; Percy Sharpe, secretary and general manager. Organized 1902, under laws of Arizona, with capitalization \$2,500,000, shares \$5 par. Lands, 4 pertenencias, area 10 acres, showing fissure veins and lenses in limestone, carrying a little native copper, and oxide and carbonate ores, having estimated values of 18% copper, 12 oz. silver and \$4 gold per ton, slightly developed by shafts and tunnels. Idle several years.

**WASHINGTON TUNNEL & COPPER CO.** WASHINGTON.

Dead. Former office was at Bridgeport, Conn. Lands were 36 claims, on Mineral Hill. Company planned, 1907, an 8,000' double-track tunnel to test entire property and cut 8 known ledges. Formerly at Conconully, Okanogan Co., Wash.

**WASHOE COPPER CO.** MONTANA.

Office: 42 Broadway, New York, N. Y. Mine office: Butte, Silver Bow Co., Mont. Employs circa 300 men. John D. Ryan, managing director; Wm. Skyrme, superintendent. Capitalization \$20,000,000, shares \$10 par. Is controlled, through ownership of entire stock issue, by Amalgamated Copper Co. Company holds title to the Washoe Reduction Works, which are leased to the Anaconda Copper Mining Co., and the Washoe Copper Co., at last accounts, owed \$7,500,000 to the Amalgamated Copper Co., this being the amount borrowed to construct the Washoe works.

Lands, 37 acres, including the Moonlight, Clear Grit, Cambers and Poulin mines, which were operating, 1907, also the Washoe, Pacific, Oden and Gold Hill claims, mainly fractional. Company had some litigation, 1907, with East Butte Extension Copper Mining Co., claiming latter had trespassed on ore bodies of the Washoe. Miscellaneous lands include 1,900 acres of coal lands on Bear Creek, in the vicinity of Bed Lodge, Carbon Co., Mont. The company also holds a controlling interest in the Cokedale Coal Co., owning coal lands and 100 coke-ovens.

The Moonlight mine, which is the principal producer, has ore averaging about 1 oz. silver for each unit of copper. The Moonlight has a 1,500' three-compartment shaft, connected underground with the Blue Jay, Neversweat, Anaconda and Pacific mines, and is timbered with 10x10" square and round timbers, in square sets. Equipment includes a 20x48" Dickson hoist, raising 2 double-deck cages with a 6" flat cable, and 2 Ingersoll-Sergeant air-compressors, of 50 drills aggregate capacity.

The Cambers mine has a 225' two-compartment shaft, connected with the Dutton and Henry George mines, equipped with a 10x14" hoist raising single-deck cages with 1" round cable.

The Clear Grit mine has a 600' two-compartment shaft, and is opened to depth of 1,000' by a 400' winze, being connected underground with the West Stewart and Mountain Consolidated mines. Hoisting is by bucket, development having been hampered, until 1906, by litigation with the Heinze interests.

The Poulin mine produces a limited quantity of ore averaging circa 2% copper and 5 oz. silver per ton.

The mill, at Butte, known as the Taylor & Brunton sampling works, was bought in 1904.

For year ending June, 1907, production was 124,608 tons of ore, averaging gross returns of \$10.92 per ton, costing \$4 per ton for extraction and \$2.32 per ton for reduction, with net earnings of \$266,973, and in the preceding year expenditures were \$173,721 in excess of receipts. For year ending June 1, 1908, production was 115,620 tons of ore, yielding gross values of \$1,052,956,

with net earnings of \$246,096. Production, October, 1908, was said to be 21,300 tons of ore, yielding 1,755,600 lbs. fine copper, or at the rate of circa 26,000,000 lbs. yearly, with ore averaging 2.35 to 3% copper and 5 to 6 oz. silver per ton. Production is estimated at 6,000,000 lbs. fine copper for 1907, and 9,000,000 lbs. for 1908.

#### **WASHOUGAL GOLD & COPPER MINING CO.**

**WASHINGTON.**

Office: 5312 Maple Ave., St. Louis, Mo. Mine office: Washougal, Clarke Co., Wash. F. A. Mabee, president; J. D. Wilcox, vice-president; J. B. Jordan and T. A. Altman, secretaries; Dr. Otto Sutter, treasurer; preceding officers constitute the directorate; A. D. Wright, general manager; Orrvis Wright, mine superintendent. Organized 1902, under laws of South Dakota, with capitalization \$1,000,000, shares \$1 par.

Lands, 560 acres, held on a 30-year lease, from the state, near Mt. St. Helens, in the Bald Mountain district, on the upper Washougal river. Lands, well timbered, show mainly granite, carrying several fissure veins, of nearly vertical dip, of which one, of 6' estimated average width, developed by 2 tunnels, carries auriferous and argentiferous copper, lead, zinc and silver, estimated to average 5 to 20% copper, 15% lead and zinc, 2 to 70 oz. silver and \$1 to \$15 gold per ton.

Equipment includes gasoline hoists, a 3-drill Leyner air-compressor, and a hydro electric power plant, installed 1908, having a Pelton wheel developing circa 150 h. p., under a 500' head. The company also has a sawmill and brick-yard, and, April, 1908, had an Allis-Chalmers blast-furnace on the ground, for installation. Company was free from debt, at last accounts, and employed circa 40 men, April, 1908. Property considered promising, and development seems along sound lines.

#### **WAUCHUSSETT MINING CO.**

**NEW MEXICO.**

Office: Worcester, Mass. Mine office: Orogrande, Otero Co., N. M. John W. Knibbs, president and treasurer; Col. J. A. Prescott, secretary and general manager; Chas. H. Knibbs, superintendent; preceding officers, Theo. Parker; Mr. W. W. Spender, Josiah K. Bennett and G. E. Moffett, directors. Lands include property formerly held by the Boston-Jarilla Copper Co., just west of the Nannie Baird mine, opened by a shaft showing auriferous and argentiferous copper ore, with a bond and lease on the War Dog group of 3 claims.

#### **WAUKEGAN & WASHINGTON MINING**

**WASHINGTON.**

##### **& SMELTING CO.**

Dead. Lands sold, for debt, January, 1908, to Stephen H. Kennedy. Formerly at Bossburg, Stevens Co., Wash.

#### **WEBER COUNTY MINING & MILLING CO.**

**UTAH.**

Dead. Was organized circa October, 1906, and was succeeded January, 1908, by Del Verde Tunnel Co. Albert Scocroft was president. Formerly at Ogden, Weber Co., Utah.

#### **WEBSTER MINING CO.**

**UTAH.**

Letter returned unclaimed from former mine office, Marysvale, Piute Co., Utah. Wm. E. White, superintendent; Fisher Bros. & White, lessees. Mine has produced some silver, lead and gold ores in the past. Present management has developed ore assaying 5 to 40% copper.

#### **WEILBERTHALEE BERGWERKE G. m. b. H.**

**GERMANY.**

Mine office: Markirch, Elsass, Germany. Dr. Recht, president; Jakob Siebenzueh, superintendent. Capitalization, 1,400,000 marks. Is a producer of silver, copper and antimony, mainly from tetrahedrite.

#### **WEIMER COPPER CO.**

**IDAHO.**

Office: care of John B. Weimer, manager, Salt Lake City, Utah. Mine office: Dubois, Fremont Co., Idaho. Peter Weimer, superintendent. Lands

originally were 18 claims, area 360 acres, said to have been increased, 1907, to 44 claims, area 880 acres. Mine has an open-cut and 3 tunnels, 2 longest 300' each. Property shows a contact zone of 100' to 200' width, between quartzite and limestone, carrying high-grade ore in pockets and cross-fissures, latter, of 3" to 2" width, running at right angles to ledge. Shipped, 1907, considerable ore of 16 to 18% copper tenor, production for year amounting to circa 200,000 lbs. fine copper. Planned a smelter, but company in debt and lands said to be unpaid for. Property considered promising, but company apparently in a bad way.

**C. WEISS y CA.****PERÚ.**

Mine office: Nuevo Cafete, Lima, Perú. Mine has auriferous and argentiferous copper ores, worked on a small scale, at last accounts.

**WELDON GOLD & COPPER CO.****ARIZONA.**

Office: Tucson, Ariz. Mine office: Weldon, Pima Co., Ariz. Jas. A. Greene, vice-president; Ferris S. Fitch, secretary, treasurer and general manager; preceding officers, Hon. Samuel W. Smith, Frederick M. Alger and Frank R. Osborne, directors; Luke Turnbull, superintendent; J. M. Martinez, mine superintendent; Clare Turnbull, mill superintendent; J. B. Tomlinson, consulting engineer.

Organized Jan. 26, 1901, under laws of Arizona, with capitalization \$2,500,000, shares \$1 par, issued, \$2,175,000. Was said, August, 1907, to have expended upwards of \$100,000. Has circa 450 shareholders. Annual meeting, first Monday in February.

Lands, 49 claims, partly patented, area 980 acres, and 3 millsites, with total area of 1,020 acres, in the Quijotoa district, circa 40 miles from the Arizona & Southern railway. Lands show granite, andesite, shales and limestone, reported to carry 8 contact deposits, between granite and andesite, two said to be traceable 2 miles, of which one, of 200' claimed average width, carries mainly gold values. The copper ore body shows malachite near surface, and at depth has auriferous chalcopyrite, associated with sphalerite, galena and pyrite, with a brecciated quartz gangue, giving assays of 10 to 30% copper and 5 to 70% lead. Ore values, as a whole, apparently are more in gold, silver and lead than in copper.

Development includes an old 1,800' crosscut tunnel, not used by present company, driven, circa 1880, by the Peer & Peerless Mining Co. New development consists of shafts of 330', 200', 150', 100', 112', 85' and 60', and tunnels of 430', 275', 200', 100', 132', 101', 123', 100', 200' and 100', with total workings of circa 4,500', at end 1906, estimated to show 1,000,000 tons of ore, which figures are excessive, with 90,000 tons blocked out for stoping.

Equipment is reported by company to include a steam and gasoline installation, aggregating 500 h. p. at the mine and mill. There are two 45-h. p. hoists, good for 700' depth, and Fairbanks & Morse and Leyner air-compressors of 5 drills aggregate capacity.

Buildings, 17 in number, include an 18x20' wooden machine-shop, boiler-house, carpenter-shop, smithy, boarding-house, assay office and store.

The 100-ton stamp-mill and concentrator, 75x100' in size, of wood, sheathed with iron, has 30 gravity stamps and a 250-h. p. engine. Equipment of the concentrator includes 4 Blake and Samson crushers, one 50-ton Elspass centrifugal crusher, and 3 Standard tables. In 1907 the company installed the Hendryx Electro Cyanide process, consisting of an agitator, filter and precipitator, and mill was said January, 1907, to be running double shifts, making about 2 tons of concentrates daily, according to the company's annual reports, but official returns of the Territory of Arizona, covering the year 1907, do not show any production of copper, silver or gold by this company.

**WELLINGTON COPPER MINING CO.****NEW MEXICO.**

Mine office: Cutter, Sierra Co., N. M. Organized circa November, 1907, under laws of New Mexico, with capitalization \$3,000,000, by Edw. F. Curtis, J. A. Sherman and Jas. F. Kindall.

**WELSH COPPER MINING SYNDICATE, LTD.****WALES.**

Office: 9 Fenchurch Ave., London, E. C., Eng. Mine office: Talybont, R. S. O., Cardiganshire, Wales. John Bell-Irving, chairman; Richard S. Corbett, managing director; W. H. Bartlett, secretary. Organized Apr. 9, 1902, under laws of Great Britain, with capitalization £17,500, shares £1 par. Lands, 933 acres, including the Eagair Hir mine, carrying argentiferous copper and lead sulphides, in 2 fissure veins of 40' average width, claimed by company to average 3 to 10% copper, 4 to 5% lead and 13 oz. silver per ton, opened by shafts of 150' and 500'. Has a 40-ton concentrator. Idle some years and presumably moribund.

**WENDENDALE GOLD MINING CO.****ARIZONA.**

Mine office: Wendendale, Yuma Co., Ariz. Lands, in the Cunningham Pass district, gave ore that yielded 13% copper and \$12 gold per ton, from a smelter shipment, 1906. Presumably idle.

**WENDIGO COPPER CO., LTD.****MICHIGAN.**

Dead. Was an offspring of, and, July, 1901, was absorbed by, Isle Royale Land Corporation, Ltd. Formerly on Isle Royale, Michigan. Fully described Vol. II.

**WENTWORTH COPPER CO., LTD.****NOVA SCOTIA.**

Mine office: Wentworth, Cumberland Co., N. S. Organized circa February, 1907, to take over lands, bought at foreclosure sale, of Cumberland Copper Co.

**WERDENHOFF MINING & MILLING CO.****IDAHO.**

Office: care of Hon. F. W. Hunt, president, Boise, Idaho. Mine office: Warren, Idaho Co., Idaho. Stephen A. Powell, secretary; Horace E. Neal, treasurer. Capitalization \$5,000,000, shares \$1 par. Lands, 9 lode claims and 2 placer claims, area 240 acres, in the Big Creek district, showing a mineral zone of about 250' width, carrying mainly gold values, with a little lead and copper.

**WESSEL COPPER MINING & MILLING CO.****ARIZONA.**

Office: St. Louis, Mo. Mine office: Casa Grande, Pinal Co., Ariz. Lands, 2 miles north of Toltec, have a 97' shaft showing a 10' vein assaying 10 to 14% copper, and about \$2 gold per ton, with occasional silver values.

**WEST BINGHAM COPPER CO.****UTAH.**

Office: 1104-43 Exchange Place, New York, N. Y. Mine office: Bingham Canyon, Salt Lake Co., Utah. Presumably idle.

**WEST BRITISH DEVELOPMENT SYNDICATE, LTD.****IRELAND.**

Office: 1 Crosshall St., London, E. C., Eng. Mine office: Berehaven, Co. Cork, Ireland. Harry V. Kilvert, J. P., chairman; Thos. L. Miller and H. W. Wilson, managing directors; G. S. & T. Holmes, mine managers; R. Shacklady, secretary. Organized Aug. 16, 1905, under laws of Great Britain, with capitalization £31,500, in 30,000 £1 6% cumulative preference shares and 30,000 deferred shares of 1s. par. Property is sundry leasehold lands, at Berehaven, Crookhaven, Bally and Cahermore.

**WEST BUTTE MINING CO.****MONTANA.**

Letter returned unclaimed from former office and mine, Butte, Silver Bow Co., Mont. Chas. Schmidt, president; W. McConnell, vice-president; Carroll G. Dolman, secretary and treasurer. Organized Jan. 31, 1906, under laws of Montana, with capitalization \$3,000,000, shares \$5 par. Property was options on the Columbia and Montrose claims, in the western part of the Butte district, the Columbia claim, area 9.32 acres, having a 144' shaft, claimed to have

produced about \$100,000 worth of silver ore, many years ago. Idle and apparently moribund.

#### WEST CANANEA COPPER CO.

**MEXICO.**

Letter returned unclaimed from former office, Bisbee, Ariz. Mine office: La Cananea, Arizpe; Sonora, Mex. John H. Slaughter, president; J. A. Howell, secretary and treasurer; preceding officers, W. T. Hughes, B. N. Norton, C. B. Tarbell and J. C. Gress, directors. Organized Sept. 5, 1906, under laws of Arizona, with capitalization \$500,000, shares \$1 par. Management is said to have decided to issue fresh stock to clear up a \$40,000 indebtedness. Lands, 286 hectares, circa 5 miles west of the Greene Cananea, opened by a tunnel said to have developed considerable ore of fair grade. Shipped, 1907, a little ore to El Paso smelter. Presumably idle.

#### WEST CLONCURRY COPPER CO., LTD.

**AUSTRALIA.**

Dead. Wound up August, 1907. Was organized June 28, 1906, with capitalization £32,000, shares 10s. par. Formerly at Cloncurry, Beaconsfield Co., Queensland, Australia.

#### WEST COAST MINING CO.

**ALASKA.**

Mine office: Latouche, Latouche Island, Alaska.

#### WEST COAST MINING & SMELTING CO.

**MEXICO.**

Office: Pennsylvania Bldg., Philadelphia, Pa. Mine office: Mocorito, Sinaloa, Mex. Howard L. Hains, president; Robert C. Thomas, vice-president; Chas. M. Hicks, secretary; Henry B. Neely, treasurer; preceding officers, Jas. B. Coryell, Gresham C. Colkett and Geo. B. Wilson, directors; Edward H. Hicks, general manager. Organized circa 1906, under laws of Maine, with capitalization \$2,500,000, shares \$1 par, in \$500,000 preferred 7% stock and \$2,000,000 common stock.

Lands, 8 groups, 5 to 20 miles from Mocorito, principal property being Los Tajos mine, area circa 400 acres, showing 6 copper veins, of which 3 under development, with circa 1,500' of tunnels, are said to give ores averaging 8 to 12% copper and \$10 to \$12 combined gold and silver values per metric ton. The property was claimed, 1907, to have in sight circa 200,000 tons of ore, of about \$30 per ton average value.

Equipment, installed late 1908, includes a mining plant having a 35-h. p. boiler, Ingersoll-Rand air-compressor and 6 Rand power drills. A small concentrator was practically completed at end of 1908, and was planned to be in operation not later than Feb. 10, 1909. Company planned, early 1907, a 50-ton smelter, but apparently has installed the concentrator in preference.

#### WEST COLUMBUS COPPER CO.

**UTAH.**

Office: 44 Broadway, New York, N. Y. Mine office: Alta, Salt Lake Co., Utah. Gen. Stillman F. Kneeland, president; W. F. Adams, treasurer; Jas. A. Shorten, secretary; preceding officers, F. W. Davis, John P. Stone and D. C. Krakauer, directors; Anthony O. Jacobson, manager. Organized circa 1907, under laws of Arizona, with capitalization \$400,000, shares \$1 par. Lands, 6 claims, area 100 acres, about one-half mile from the Columbus Consolidated and supposed to carry the extension of the ores of the latter. Has a tunnel showing ore assaying up to 12% copper, 90 oz. silver and \$4 gold per ton.

#### WEST COLUSA MINE.

**MONTANA.**

Owned by Boston & Montana Consolidated Copper & Silver Mining Co.

#### WESTERN AFRICA MALACHITE COPPER CO., LTD.

**ANGOLA.**

Dead. Formerly at Bembe, Angola.

#### WESTERN CONSOLIDATED MINING CO.

**MEXICO.**

Letter returned unclaimed from former mine office, Hermosillo, Sonora, Mex. Lands, 300 hectares, 18 miles north of Hermosillo, said to show about 20 veins, some worked in the past to shallow depth. Has a 150' shaft with 2 levels opened on a 4' silver-lead vein, and a 30' two compartment shaft on a

copper vein. Has two 65-h. p. boilers, a 12x14" hoist with 4' drum, and a 10-drill air-compressor, with a 1½-mile pipe-line to the Sonora River.

#### **WESTERN COPPER CO.**

**ARIZONA.**

Letter returned unclaimed from former mine office, Globe, Gila Co., Ariz. Property was said to show a 2' vein, assaying 25% copper. Idle and apparently moribund.

#### **WESTERN COPPER CO.**

**MONTANA.**

Office: Calumet State Bank Bldg., Calumet, Mich. Mine office: Butte, Silver Bow Co., Mont. Organized circa August, 1908, with capitalization \$1,000,000, shares \$5 par, as a reconstruction of Calumet & Butte Mining Co., and exchanged new stock for old, on a parity, new stock being marked \$2 paid in. Merchants & Miners Bank, Calumet, transfer agent.

Lands, 14 claims, area 166 acres, in the vicinity of Columbia Gardens, including 2 claims known as the Albert and Richelieu, near the Altoona, on which the old company spent about \$100,000. Development is by 2 shafts, deepest 530', with a crosscut started on the 500' level. Mine has about 3,000' of workings, showing native copper, azurite, and malachite. Shipped, 1907, a little ore, taken from shallow workings, averaging about 12% copper.

#### **WESTERN EXPLORATION CO.**

**ARIZONA.**

Dead. Was succeeded by Globe Mines Exploration Co. Formerly at Globe, Gila Co., Ariz.

#### **WESTERN EXPLORATION CO.**

**CALIFORNIA.**

Dead. Formerly at Winthrop, Shasta Co., Cal. Described Vol. VI.

#### **WESTERN MINING CO.**

**COLORADO.**

Office: 71 Broadway, New York, N. Y. Mine office: Lake City, Hinsdale Co., Colo. Saml. D. Nicholson, general manager; N. A. Nicholson, superintendent. Property includes the Ute and Ulay mines, carrying auriferous and argentiferous lead and copper ores. Has water, steam and electric power and a 200-ton concentrator.

#### **WESTERN MINING CO.**

**MONTANA.**

Office: Butte, Mont. Mine office: Apex, Beaverhead Co., Mont. Jas. Willoughby, superintendent. Was held, formerly, by Washoe Copper Co., under a \$125,000 bond and lease, dated Dec. 8, 1904, and the Amalgamated Copper Co., or some subsidiary corporation, supposedly owns a considerable share interest.

Lands, one claim, patented, area 20 acres, also a 3-acre millsite, in the Utopia district. Property shows granite, dolomite and quartzite, with 2 contact deposits, between granite and limestone, of 8' to 10' average width, developed by shafts of 150' and 220', and by an 820' tunnel, with 1,600' of workings, estimated to show 50,000 tons of ore, with 10,000 tons blocked out for stoping. Ores are mainly chalcocite and chalcopyrite, with a considerable variety of oxidized ores, giving average returns of circa 9% copper, 4.5 oz silver and 40 cents gold per ton. Mine, opened 1867, has been worked since, intermittently, by leasers. The mine is said to have found no large ore bodies.

Equipment includes steam and gasoline power, and a small smelter, connected with the shafts by a tramway. The smelter has a 30-ton 36" circular water-jacket blast-furnace, and, when operated, made matte averaging 55% copper, 27 oz silver and 0.13 oz. gold per ton.

Production, 1903, was circa 1,400,000 lbs. fine copper, since which there has been no regular output, though small quantities of ore have been extracted, by lessees, from time to time.

#### **WESTERN MINING & DEVELOPMENT CO.**

**ARIZONA.**

Office: Chicago, Ills. Mine office: Planet, Yuma Co., Ariz. Lands, 34 claims, known as the Copper Prince group, 12 miles northeast of Planet, on the Bill Williams Fork river, formerly owned by Signal Copper Co., and held

by present company under bond and lease. Development is by a 150' shaft, on a large body of auriferous copper ore, of medium to high grade. Water power is available from the Bill Williams Fork river. Property considered promising.

**WESTERN MINING & DEVELOPMENT CO.** COLORADO.

Office: 42 Home Bank Bldg., Detroit, Mich. Mine office: Pearl, Larimer Co., Colo. A. C. Stellwagen, president; F. W. Henninger, vice-president; J. D. Mackay, secretary and treasurer; C. E. Knapp, general manager; Harold Wilson, superintendent. Property was a lease, expiring 1906, on the holdings of the Pearl Copper Mining & Smelting Co. Idle and presumably moribund.

**WESTERN MINING & MILLING CO.** UTAH.

Office: 14 West First St., Salt Lake City, Utah. Mine office: Lincoln, Tooele Co., Utah. J. H. Hurd, agent; John B. Taylor, superintendent. Has silver, lead and copper ores, with steam power, employing about 20 men at last accounts.

**WESTERN MINING & STEEL CORPORATION.** CALIFORNIA.

Dead. Formerly at San Luis Obispo, San Luis Obispo Co., Cal.

**WESTERN MONTANA MINING CO.** MONTANA.

Dead. Former officers were A. H. Gray, president and general manager, and C. L. Butterfield, financial agent. Company, organized 1905, had an office in the Park Building, Pittsburg, Pa. Lands included the Exchequer and Snowdrift mines, lying north of the Richmond and Monitor, developed by a 400' tunnel. Formerly at Superior, Missoula Co., Mont.

**WESTERN NEVADA COPPER CO.** NEVADA.

Office: 608 Dooly Bldg., Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. Employs circa 40 men. C. E. Loose, president; Frank Knox, treasurer; preceding officers, Samuel Newhouse, Hon. Reed Smoot and D. H. Peery, directors; John Josten, secretary; Maurice M. Johnson, general manager; Frank B. Cook, assistant manager; R. H. Britt, superintendent. Organized circa November, 1906, under laws of Arizona, with capitalization \$6,500,000, shares \$5 par.

Lands, 8 claims, patented, area 150 acres, known as the Dyer group, also water rights and a smelter site on the Walker River, near the mine. Lands, circa one mile south of the Mason Valley, and said to be in the same contact zone, show a contact deposit of circa 25' width, between granite and limestone, with strong mineralization in the lime, the ore body having a north and south strike, with dip of 65°, apparently occurring as a replacement, carrying argentiferous azurite, malachite, chalcocite and chalcopyrite, estimated by company to average 5% copper, and mine has produced ore, in quantities, up to 20% in copper tenor. Development is by a 275' shaft, a 500' tunnel in ore, and a 1,014' crosscut tunnel, with 6,100' of workings, the lower tunnel being 140' vertically below the upper.

Equipment includes a 150-h. p. plant having a 25-h. p. hoist, good for 500', and a 5-drill two-stage air-compressor. There are 5 mine buildings. Company plans deepening shaft and continuing developments. Property considered promising.

**WESTERN PACIFIC MINING CO.** UTAH.

Office: 208-69 East Third South St., Salt Lake City, Utah. Mine office: Callao, Juab Co., Utah. E. J. Yard, president; Jackson H. McChrystal, vice-president; Elroy M. Clark, secretary and treasurer; preceding officers, C. O. Baxter and Jos. W. Gwynn, directors. Lands, 320 acres, adjoining the Western Utah, in the Willow Springs division of the Deep Creek district, in Tooele county, just over the Juab county line. Ore shipped to end of 1907 averaged about 13% copper, 25% lead and 22% iron, with several ounces of silver per ton.

**WESTERN QUEEN MINES CO.** ARIZONA.

Mine office: Turkey, Yavapai Co., Ariz. Dr. J. B. McNally, president and

general manager; John McKenzie, superintendent. Lands, 4 miles from a railroad, lying next west of the Corona Consolidated, having a 400' shaft, sunk by former owners, showing a vein with a 6" to 3' paystreak carrying up to 1,400 oz silver per ton, balance being low grade auriferous and cupriferous copper ore. Has shipped ore returning 22% lead and 5% copper. Has steam power.

**WESTERN SLOPE COPPER MINING & SMELTING CO. COLORADO.**

Office: Thompson Bldg., Butler, Pa. Mine office: Grand Junction, Mesa Co., Colo. J. S. Shaw, president and general manager; H. M. Armstrong, vice-president; A. F. Regal, secretary; W. R. Cowden, treasurer; F. W. Smith, superintendent; preceding officers, P. H. Sechler, J. W. Thompson, F. M. McClelland and C. M. Harden, directors. Organized July 25, 1900, under laws of Pennsylvania, with capitalization \$750,000, shares \$1 par, and apparently was reorganized, circa 1908, with a complete and salutary change in management.

Lands, 10 claims, area 200 acres, also a millsite, in process of patenting, in the Unaweep district, 23 miles southeast of Grand Junction and 12 miles from Whitewater, the nearest railroad point. The Naney Hanks claim has a 250' shaft, from which 17 carloads of ore, shipped some years ago, gave returns of 11 to 18% copper.

The former management of this company claimed to have a 50-ton melting furnace, blown in June, 1905, but there is no recent information regarding the smelter.

The old management paid regular quarterly dividends of  $\frac{1}{2}\%$ , while peddling stock, but the new directorate is considered a vast improvement upon the old. Property considered promising.

**WESTERN THARSIS MINING CO., N. L.**

TASMANIA.

Dead. Formerly at Mt. Lyell, Montagu Co., Tasmania.

**WESTERN TIN & COPPER SYNDICATE, LTD.**

ENGLAND.

Dead. Was organized Nov. 21, 1906, under laws of Great Britain, with capitalization £50,000, shares £1 par, and name changed, July, 1907, to Kelynack Tin Mine, Ltd. Formerly in Cornwall, England.

**WESTERN UTAH COFFEE CO.**

UTAH.

Office: Salt Lake City, Utah. Mine office: Ibapah, Tooele Co., Utah. W. S. McCornie, president; Duncan McVichie, vice-president; H. H. Green, secretary and treasurer; preceding officers, E. L. White, F. August Heinze, Henry M. Sweet and Hon. John A. Street, directors. Organized circa October 1906, under laws of Wyoming, with capitalization \$2,500,000, shares \$5 par.

Lands, 20 claims, area 384 acres, 100 miles from a railroad, known as the Gold Hill mine, in the Clifton section of the Deep Creek district. Mine had 14 open-cuts, pits and shafts, deepest variously reported as 170' and as 600', showing a 12' to 15' vein, with a 3' paystreak assaying up to 20% copper, 6 to 22 oz. silver and \$11 to \$14 gold per ton. Mine is claimed to have 100,000 tons of ore blocked out, which estimate is considered excessive. Closed down, late 1907, owing to lack of funds. Property considered promising.

**WEST FORK GOLD-COPPER MINING CO.**

IDAHO.

Dead. Was a rank bit of stock-jobbery, promoted by the notorious L. E. Pike, of Boston, when the United States postoffice department, so vigilant in watching petty swindlers and so blind to the big frauds, benignantly permits the continued use of the federal mails for the certain "trimming" of "suckers." Formerly in Idaho county, Idaho.

**WEST GREY ROCK MINE.**

MONTANA.

Owned by Butte & Boston Consolidated Mining Co.

**WEST LE ROI MINING CO., LTD.**

BRITISH COLUMBIA.

Dead. Compulsorily wound up, November, 1901. Formerly at Rossland, Trail district, B. C.

**WEST LYELL EXTENDED MINING CO., N. L.** **TASMANIA.**

Dead. Formerly at Gormanston, Montagu Co., Tasmania.

**WESTMORELAND COPPER CO.** **NEW BRUNSWICK.**

Dead. Formerly at Dorchester, Westmoreland Co., New Brunswick.

**WEST MOUNTAIN MINING COMPANY, OF ARIZONA.** **UTAH.**

Dead. Lands lost, and money refunded to those who bought stock. Formerly at Bingham Canyon, Salt Lake Co., Utah. Described Vol. V.

**WEST MOUNT LYELL COPPER, GOLD & SILVER MINING CO., TASMANIA, LTD.** **TASMANIA.**

Dead. Was succeeded, Oct. 7, 1897, by Copper Mines of Mount Lyell West, Ltd., also dead. Formerly at Gormanston, Montagu Co., Tasmania.

**WEST MOUNT LYELL, LTD.** **TASMANIA.**

Office: 212 Mansion House Chambers, London, E. C., Eng. Operating office: Hobart, Tasmania. Mine office: Gormanston, Montagu Co., Tasmania. R. E. Tyler, chairman; R. J. Cribb, secretary. Organized Oct. 2, 1907, under laws of Great Britain, with capitalization £100,000, shares £1 par, as a reconstruction of Copper Mines of Mount Lyell West, Ltd.

Lands, 8 claims, area 84 acres, adjoining the Mount Lyell Mining & Railway Co., Ltd., showing several wide ore bodies, giving assays of 3 to 7% copper, with small gold and silver values. Development is by 2 tunnels, principal being the Razor Back. Company also has acquired gold mining claims in the Huaraki district of New Zealand. Copper property apparently is idle.

**WEST QUINCY MINING CO.** **UTAH.**

Office: Atlas Blk., Salt Lake City, Utah. Mine office: Park City, Summit Co., Utah. G. D. B. Turner, president and general manager; J. R. Rand, vice-president; H. C. Gaw, secretary and treasurer; preceding officers, Dr. E. V. Van Norman, W. H. Dodge, E. E. Hendrick and W. C. Alexander, directors. Organized 1904, under laws of Utah, with capitalization \$1,500,000, shares \$5 par. Annual meeting, second Tuesday after first Monday in May.

Property is a  $\frac{1}{3}$  interest, with an option on the remaining interest, in the J. I. C. mine, lands, 5 claims, supposed to carry the extension of the Quincy ore body of the Daly-West mine. Has a 600' two-compartment vertical shaft, and a crosscut tunnel through property of the Little Bell mine, cutting a contact vein, giving assays up to 20% lead, 160 oz. silver and \$2 gold. It is expected that the main ore body will be cut at depth giving a back of 750', and that the Daly West contact vein will be cut at depth giving a back of 900'. Considerable trouble has been had from shifting ground and a heavy inflow of water. Property was explored, 1907, to depth of 1,300' by diamond drills.

**WESTRALIAN COPPER MINE, LTD.** **AUSTRALIA.**

Dead. Was reorganized, circa 1899, as Balla Balla Copper Mines, Ltd., which was reorganized, Apr. 16, 1901, as New Balla Balla Copper Mines, Ltd. Formerly at Port Balla Balla, Western Australia.

**WEST ST. DAVID'S GOLD & COPPER MINES, LTD.** **WALES.**

Dead. Formerly at Barmouth, Merionethshire, Wales.

**WEST SIDE MINING CO.** **WASHINGTON.**

Dead. Formerly at Berlin, King Co., Wash. Described Vol. II.

**WEST SLOPE MINING & MILLING CO.** **UTAH.**

Dead. Formerly at La Sal, Grand Co., Utah. Described Vol. III.

**WEST STEWART MINE.** **MONTANA.**

Owned by Original Consolidated Mining Co.

**WEST VIRGINIA & MONTANA MINING CO.** **MONTANA.**

Mine office: Helena, Lewis & Clark Co., Mont. Lands, 4 claims, west of Helena. Mine produced a little silver-lead ore in the past, but shows copper ore of good tenor on the 200' level.

**WEST VIRGINIA-WYOMING COPPER CO.****WYOMING**

Office: Rawlins, Carbon Co., Wyo. Mine office: Rambler, Carbon Co., Wyo. Employs 8 men. Philip Frankenberger, president; Myer Newberger, vice-president and general manager; Herbert Frankenberger, secretary; George Newberger, treasurer; John W. Buckley, superintendent; W. S. Traynor, assistant superintendent; Geo. H. Hand, consulting engineer. Organized February, 1907, under laws of Wyoming, with capitalization \$2,000,000, shares \$1 par; issued \$1,242,000. Annual meeting, first Tuesday in February.

Lands, 7 claims, area 102 acres, one-half mile from the Dosane-Rambler mine, in the Battle Lake district, showing 2 contact deposits, between diorite and quartzite, of which one, under development, of 5' to 6' average width, traceable circa 3,000', gives sulphide ores estimated to average 8% copper, 0.5 oz. silver and 0.5 to 1 oz. gold per ton. Development is by a 150' shaft and a 250 tunnel. Litigation over title was settled, 1908, in company's favor.

Equipment includes a 45-h. p. steam hoist and a 2-drill Rand air-compressor, and there are 2 mine buildings. Company plans continuous development.

**WEST YERINGTON COPPER MINING CO.****NEVADA**

Office: Provo, Utah. Mine office: Yerington, Lyon Co., Nev. John Roundy, president; O. H. Stone, vice-president; Heber Jex, secretary and treasurer; preceding officers, A. Craven and Jos. Wirthlin, directors. Organized circa June, 1907, under laws of Utah, with capitalization \$100,000, shares 10 cents par. Lands, 12 claims, circa 7 miles southwest of Yerington. Presumably idle.

**WHALEN CONSOLIDATED COPPER MINING & SMELTING CO. NEVADA.**

Dead. Was a swindle, perpetrated by Wm. Whalen. Formerly at Palisade, Eureka Co., Nev.

**WHAT CHEER COPPER MINING CO.****WYOMING**

Office: 171 Westminster St., Providence, R. I. Letter returned unclaimed from former mine office, Riverside, Carbon Co., Wyo. Wm. C. Price, president; J. Frank Baird, vice-president; J. F. Freeman, secretary and treasurer; O. S. Alers, manager. Organized under laws of Wyoming, with capitalization \$600,000. Lands, 4 claims, near Aetna, on Dunkards Creek, near Purgatory Gulch, opened by a 65' two-compartment shaft and a 237' tunnel, showing stringers of copper ore. Equipment includes a steam plant and small sawmill. Idle and apparently moribund.

**WHEAL ELLEN MINE.****SOUTH AUSTRALIA.**

Mine office: Woodchester, South Australia. Company bought, 1908, the mining plant of the Strathalbyn Mining Co., and planned resumption circa July, 1908.

**WHEAL FORTUNE EXTENDED, LTD.****AUSTRALIA.**

Office: 31 Eagle Wharf Road, Hoxton, London, N., Eng. Mine office: Northampton, Western Australia. A. Rees, secretary. Organized Feb. 20, 1900, under laws of Great Britain, with capitalization £5,000, shares £1 par. Property is lead and copper claims. Idle some years.

**WHEALKATE MINING CO.****MICHIGAN.**

Office and mine: Houghton, Houghton Co., Mich. Nathan F. Leopold, president; R. R. Goodell, vice-president; Reginald C. Pryor, secretary; Albert F. Leopold, treasurer. Organized November, 1902, under laws of Michigan, with capitalization \$50,000, shares \$25 par. Lands, 240 acres, including the old Wheal Kate mine, on which a little sadly misdirected work was done, many years ago. Is primarily a land and townsite company, but owns mineral lands in Section 17, carrying the southern extension of the Isle Royale and other cupriferous beds. Did some diamond drilling, 1907.

**WHEAL TURNER COPPER MINING CO., LTD.****AUSTRALIA.**

Mine office: Yudnamutana, South Australia. Lands, known as the Red

**Bluff** mine, 6 miles northwest of Yudnamutana, show 8 veins, with northeasterly strike, carrying cuprite, azurite, malachite, chalcocite and tetrabedrite, with quartz gangue and an iron gossan. Hand-dressed samples gave a bulk assay of circa 25% copper. Development is by 4 shallow shafts, deepest 54'. In 1905 had an aid of £1,000 from the state, and was prospecting on the proposed railway line to the Queensland border.

**WHEELER GOLD MINES CO.****NEVADA.**

Office: 414 Atlas Blk., Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. Apparently is a twin of the Yerington Copper Co.

**WHIM CREEK MINE.****AUSTRALIA.**

Owned by Whim Well Copper Mines, Ltd.

**WHIM WELL COPPER MINES, LTD.****AUSTRALIA.**

Office: 62 London Wall, London, E. C., Eng. Mine office: Whim Creek, West Pilbara Goldfield, Western Australia. Edgar Anderson, chairman and managing director; preceding officer, S. Caldwell, Sidney Fawns, J. Conchie and H. J. Silverlock, directors; Henry Bacon, secretary; Herbert R. Sleeman, general manager; Richard Piper, mine foreman; I. Flegelstaub, metallurgist. Organized July 4, 1906, under laws of Great Britain, with capitalization £150,000, shares £1 par, as a reconstruction of an old company of same name. To May 1, 1908, had expended circa £60,000 on development and equipment.

Lands 210 acres, partly freehold, known as the Whim Creek mine, 12 miles from Port Balla Balla, also water rights on Balla Balla Creek, sundry town lots and a leased jetty at Balla Balla, and a 30-acre smelter-site at COUNGUINA POOL, a freshwater lake near Balla Balla. Mining property includes 75 acres leasehold, carrying iron ore and limestone for fluxing. Country rocks are shales and schists, latter partly chloritic but mainly hornblendic, carrying mainly irregular tabular impregnations of chalcocite in silicious kaolinized strata having an east and west strike and dip of only 25°, lode being very flat and conformable to bedding of the enclosing slates, which have been considerably crumpled. Ores are cuprite, malachite, azurite and chalcocite, mainly the latter. Ore bodies are 3' to 20' in width, with an average width of 6', and the ore zone is traceable circa 3,000'.

Mine, under former ownership, was poorly developed. Property has 5 crosscut tunnels, of 50', 80', 120', 300' and 300', and a 200' tunnel in ore, with 5 shallow shafts of 60', 69', 74', 77' and 80'. About 2,000' of openings were made in 1907, giving estimated reserves of 80,000 tons of 11% copper ore blocked out for stoping, with about 40,000 tons additional in sight, and 200,000 tons inferable before reaching the water-level. Average samples from all working faces, about 15 in number, gave assays of 12.18% copper, balance of ore remaining from assorting being estimated to carry 8% copper. Property was tested, 1907, by diamond drill. Water is either alkaline or sulphurous, each destructive to the boilers, but, with careful mixing, gives feed-water causing little corrosion.

The concentrator, of 50 tons daily capacity, has a Gates crusher, mill being merely a crushing and sorting plant. Company has built a 14-mile railway, from the mine to Port Balla Balla, at a cost of circa £15,000, including two locomotives and necessary rolling stock.

Production, 1907, was 1,808 long tons of ore averaging 22.5% copper, equal to 911,232 lbs. fine copper, and before drop in price of copper, company nearly paid expenses from production. Employs circa 75 men. Is considered a property of considerable promise, with a good management.

**WHIPPLE MOUNTAIN GOLD & COPPER MINING CO.****CALIFORNIA.**

Office: 803-405 South Hill St., Los Angeles, Cal. Mine office: Needles, San Bernardino Co., Cal. Jas. L. Brice, superintendent. Lands, 21 claims, on Whipple Mountain, south of Needles, 7 miles from a railroad, showing 4 parallel

veins, up to circa 75' in width, carrying promising copper and gold outcrops. Has a 175' vertical shaft, cutting an 18' vein carrying about 5% copper and \$20 gold per ton. Has gasoline power and hoist, with an air-compressor and 4 buildings. Shall shipments, early 1908, to Needles smelter, returned 10.8% copper, 2 oz. silver and \$20 gold per ton.

**WHIPSAW COPPER CO.**

**ARIZONA.**

Dead. Apparently shareholders were whipsawed. Formerly at Prescott, Yavapai Co., Ariz.

**WHITE BEAR CONSOLIDATED GOLD MINES, LTD. BRITISH COLUMBIA.**

Dead. Reorganized, circa 1908, as Consolidated White Bear Mining Co., Ltd. Formerly at Rossland, Trail district, B. C. Described Vol. VII.

**WHITE CANYON COPPER CO.**

**UTAH.**

Office: 624 Peyton Blk., Spokane, Wash. Capt. A. E. Wayland, secretary. Lands are said to be 13 claims, in San Juan County, Utah, on which company planned installing a leaching plant during 1908.

**WHITE CHIEF MINING & MILLING CO.**

**MEXICO.**

Letter returned unclaimed from former office, 217 Sansom St., San Francisco, Cal. Mine office: Chinipas, Arteaga, Chihuahua, Mex. M. A. Newman, superintendent. Property is the San Miguel del Castillo mine, carrying auriferous copper ore. Has steam power and a 40-ton mill.

**WHITE EAGLE COPPER MINING CO.**

**TEXAS.**

Dead. Lands sold for debt. Formerly at Burnet, Burnet Co., Texas.

**WHITE GIANT MINING & SMELTING CO.**

**ARIZONA.**

Office and mine: care of G. M. Willard, manager, Jerome, Yavapai Co., Ariz. Lands, 5 claims, area 100 acres, known as the Allan-Hoover group, in the Squaw Peak district, circa 25 miles south of Jerome, having several short tunnels and shallow shafts, deepest 70', said to show galena assaying up to 55% lead and \$100 gold per ton. Presumably idle.

**WHITE HORSE MINING CO.**

**ARIZONA.**

Office: 20 Broad St., New York, N. Y. Mine office: Prescott, Yavapai Co., Ariz. H. R. Frost, president; preceding officer, L. D. C. Ferguson, Maj. R. G. Vassar, S. P. Ostrom and M. J. McGibbon, directors. Capitalization \$2,000,000, shares \$1 par. Bonds, \$50,000. Lands, circa 200 acres, at Squaw Creek, and company also is said to have a group of claims, now idle, in the Walker district. Development is by 2 shafts and a tunnel. Equipment includes a 10-stamp mill. J. F. Wisner was fiscal agent.

**WHITE KNOB COPPER CO., LTD.**

**IDAHO.**

Office: 36 Wall St., New York, N. Y. Mine office: Mackay, Custer Co., Idaho. Wilbur K. Mathews, president; A. M. Poole, secretary and treasurer. Organized originally under laws of West Virginia, as White Knob Mining Co., and reorganized, under present title, Apr. 24, 1900, under laws of New Jersey, and again reorganized, January, 1903, under same charter and title, and yet again reconstructed, 1904, with capitalization \$2,600,000, shares \$10 par, "once more yet again" reconstructed, or practically succeeded, circa January, 1905, by White Knob Copper & Development Co., Ltd., but apparently the White Knob Copper Co., Ltd., retains corporate existence, though, if so, it is a mere shell, as the mine has been sold to the Empire Copper Co., and the remaining assets apparently are held by White Knob Copper & Development Co., Ltd. For further particulars see White Knob Copper & Development Co., Ltd., in this volume, and White Knob Copper Co., Ltd., in Vol. VI., which descriptions explain, in detail, the miserable floundering of this company and its predecessors.

**WHITE KNOB COPPER & DEVELOPMENT CO., LTD.**

**IDAHO.**

Office: 36 Wall St., New York, N. Y. Mine office: Mackay, Custer Co., Idaho. Wilbur K. Mathews, president; Arthur Kennedy, vice-president;

Geo. H. Dupee, secretary and treasurer; preceding officers, Chas. H. Dupee and C. H. Birdsell, directors.

Organized Apr. 6, 1905, under laws of Maine, with capitalization \$6,000,000, shares \$10 par, fully issued, in \$2,000,000 cumulative 7% preferred stock and \$4,000,000 common stock, preferred stock being convertible into common at option of shareholders. Company was organized as successor of White Knob Cooper Co., Ltd., assets of which are said to have been sold, under foreclosure, and bought in by holders of securities. Present company is said to have taken over the properties and assets of the White Knob Copper Co., Ltd., of New Jersey, exchanging share for share, plus a \$3 assessment. Apparently the White Knob Copper Co., Ltd., of New Jersey, retains a corporate existence.

To give even a remote understanding of this crazy-quilt patchwork corporation, it is necessary to outline the history of the various preceding White Knob corporations, all under the same general management—if such a respectable word as management can be misapplied to such gross mismanagement as this corporation and its predecessors have suffered, from birth.

It is doubtful if in the history of mining there is a finer example of utter incompetency than is afforded by the spectral succession of White Knob corporations, organized in various states, and at frequent intervals, all born with weak constitutions, but all, unfortunately, retaining sufficient vitality to pass along to their progeny the scrofulous taint with which the first was endowed.

The White Knob Mining Co., which seems to have been the ancestor of the entire decrepit family of White Knobs, was organized, circa 1899, under the laws of West Virginia, with capitalization \$5,000,000, and was reorganized, Apr. 24, 1900, under laws of New Jersey, as White Knob Copper Co., Ltd., with capitalization \$12,500,000, which corporation was reorganized, January, 1903, under the same title and charter, with capitalization reduced to \$2,000,000, and was again reconstructed, 1904, with capitalization \$2,600,000, shares \$10 par, and apparently was succeeded, or at least was rendered a mere shell, Apr. 6, 1905, by the White Knob Copper & Development Co., Ltd., which is the present corporation, though how long it may be for this world the rashest prophet scarce would care to guess, in view of the family history.

The various White Knob corporations expended circa \$3,000,000, on the property in Idaho, to most excellent disadvantage, the policies of the White Knobs being consistent only in their utter inconsistency. Mining officials were changed repeatedly; reorganization followed reorganization; stock was increased and decreased, and again increased and decreased; bonds were authorized, issued, and redeemed; the smelter was blown in, blown out and again blown in, and out, repeatedly; local officials were changed so frequently that it scarcely would be an exaggeration to say that nearly every position had three incumbents—one going, one on the job, and one coming. Such a witches' dance of financial and technical lunacy would be difficult to describe adequately.

At one time, in 1905, the smelter at Mackay was partially dismantled, with the intention of removing it to Shasta County, California, where the company supposed it had bought control of the Balaklala, but control of the Balaklala was sold twice, and the White Knob holdings of 50,000 shares of Balaklala were said to have been sold, February, 1906, at an average price of about \$9 per share. Circa 1906 the company gave a 5-year lease, on its mine and smelter, without royalty, to the MacBeth Lease, Inc., the company being in a very bad way financially, and this lease was sold, circa 1907, to the Empire Copper Co., which also bought the mine and smelter, the White Knob supposedly receiving, in return for its own property, a 25% share interest in the Empire Copper Co., a proceeding questionable on its face, but actually to the company's benefit, as the White Knob management is far better off owning a

25% interest in any mine under control of competent men, than to own the mine and smelter entirely, if under its own desperately inefficient management.

The company is supposed to control the Mackay Development Co., Ltd., which furnishes water for the Empire smelter and the town of Mackay. Company also is said to control, through stock ownership, the Argonaut Mining Co., of Jackson, Amador Co., California, having a gold mine with a 40-stamp mill. Apparently the company no longer has a share interest in the Balaklala.

Apparently the present corporation received a \$3 assessment from at least a portion of the old shareholders, who shut their eyes and took another chance on the management. It has been said that, when Poole resigned, there was in the treasury circa \$450,000 in cash, but the company's annual report, filed Oct. 8, 1907, with the State of New York, claimed that its debts did not exceed \$25,000, with assets "of at least \$2,000,000," the assets presumably being share interests in other mining corporations, value of which is uncertain.

The management of the company promised information to the minority shareholders, but failed to keep its word, and the minority shareholders, having failed in various attempts to obtain information regarding the company's finances, filed, through Geo. A. Hobe, et al, circa November, 1908, in the Maine supreme court, a bill of equity, asking permission to examine the company's books and records. The company and its management are viewed with utter disgust, and the shareholders with derision.

#### **WHITE KNOB MINING CO.**

**IDAHO.**

Dead. Reorganized, 1900, as White Knob Copper Co., Ltd. Formerly at Mackay, Custer Co., Idaho.

#### **WHITE PINE COPPER CO.**

**NEVADA.**

Dead. Was merged, Nov. 17, 1904, in Nevada Consolidated Copper Co. Formerly at Ely, White Pine Co., Nev.

#### **WHITE PINE MINE.**

**MICHIGAN.**

Office: care of St. Mary's Mineral Land Co., owner, 701-199 Washington St., Boston, Mass. Mine office: Ontonagon, Ontonagon Co., Mich. Lands, 80 acres, in Section 5, T. 50 N., R. 42 W., circa 3 miles east of the Nonesuch, having 4 pits and a 170' shaft, supposedly sunk on the Nonesuch lode. Is under option to the Calumet & Hecla, and was tested, 1907, by diamond drill borings, which are said to have shown a promising copper bed.

#### **WHITE QUAIL COPPER CO.**

**COLORADO.**

Dead. Was merged Oct. 21, 1907, in Doyle Consolidated Mines Co. Formerly at Hesperus, La Plata Co., Colo.

#### **WHITE ROCK COPPER MINING CO.**

**CALIFORNIA.**

Dead. Formerly at Lewis, Mariposa Co., Cal. Described Vol. VI.

#### **WHITE TANKS MINING CORPORATION.**

**ARIZONA.**

Office: 740 Land Title Bldg., Philadelphia, Pa. Works office: Wickenburg, Maricopa Co., Ariz. Lands, known as the Bert Ford group, are in the White Tanks Mountains, circa 40 miles west of Phoenix. Has a smelter with 50-ton water-jacket blast-furnace, but operations proved unsuccessful. Idle several years, and apparently moribund.

#### **WHITEWATER MINING CO.**

**NEW MEXICO.**

Mine office: Tyrone, Grant Co., N. M.

#### **WHITNEY REDUCTION CO.**

**NORTH CAROLINA.**

Mine office: Gold Hill, Rowan Co., N. C. Lands adjoin the Union. Long idle.

#### **WICKENBURG SMELTING & REFINING CO.**

**ARIZONA.**

Dead. Formerly at Wickenburg, Maricopa Co., Ariz.

#### **WIDDIN COPPER SYNDICATE, LTD.**

**BULGARIA.**

Office: 88 Bishopsgate St. Within, London, E. C., Eng. Mine office: Belogradchik, Vidin, Bulgaria. W. H. Fowler, J. P., chairman; R. Sach, consulting engineer; A. Thorp, secretary. Organized June 24, 1907, under laws of Great

Britain, with capitalization £20,000, shares £1 par. Property is the Chastie mine, area 250 hectares, held under lease from the principality of Bulgaria. Mine shows 2 fissure veins, of 30" average width, traceable 600', carrying chalcopyrite assaying up to 18% copper, 8 oz. silver and 2 dwts. gold per ton. Has 15 short tunnels and 3 shafts, deepest 260', showing circa 5,000 tons of ore, at last accounts.

**WILD BILL MINE.****MONTANA.**

Owned by Anaconda Copper Mining Co.

**WILD ROSE MINING CO.****CALIFORNIA.**

Mine office: Hoveck, Inyo Co., Cal. E. H. Goodpaster, superintendent. Lands, in the Panamint Mountains, have 2 shallow shafts, showing ore giving good assay values in copper, silver and gold, from selected samples.

**WILHELMI SILVER & COPPER CO.****MEXICO.**

Mine office: Velardeña, Cuencamé, Durango, Mex. Louis Sandberg, superintendent. Organized under laws of Arizona, with capitalization \$3,000,000. Lands, circa 1,500 acres, include the Santa Eulalia, Loma, Cuchereña and other properties, and an option on the Santa Ines mine. Is said to employ circa 100 men.

**WILLARD-ELY COPPER CO.****NEVADA.**

Office: 32 Liberty St., New York, N. Y. Letter returned unclaimed from former mine office, Ely, White Pine Co., Nev. Organized circa 1906, as successor of McKinley Mines Co., which succeeded the McKinley Mining & Smelting Co., which succeeded the Canton Mining Co., these being the only successes noted in connection with the property. Lands, 5 claims, known as the Aurora group, scattered and apparently poorly located. The Aurora, formerly worked as a gold mine, but showing copper ores in lower workings, has a 300' main shaft, with about 1,000' of drifts. Idle, and company, by reason of its bad antecedents, is not regarded favorably.

**WILCOCKS' CLONCURREY SYNDICATE.****AUSTRALIA.**

Office: Eagle St., Brisbane, Queensland, Australia. Mine office: Cloncurrey, Beaconsfield Co., Queensland, Australia. Thos. Welsby, secretary. Capitalization £30,000, shares £37 10s. par. Property has 2 shafts, known as the Cornett and Jessie, of circa 100' depth each. Has a small smelter, completed late 1907, and shipped, 1907, a little ore to Townsville. Idle at last accounts.

**WILCOCKS' COPPER MINES, LTD.****AUSTRALIA.**

Office: Brisbane, Queensland, Australia. Mine office: Cloncurrey, Beaconsfield Co., Queensland, Australia. Thos. Welsby, secretary; Cecil Rae, smelter superintendent. Lands include the Jessie mine, having an 80' shaft, which is the principal property, and the Secret mine, worked open-east. The smelter, blown in 1908, has a reverberatory furnace, treating ore averaging about 20% copper, after selection, and is said to be turning out high grade matte.

**WILLIAM PENN MINING CO.****WYOMING.**

Office: Lewisburg, Pa. Mine office: Encampment, Carbon Co., Wyo. J. E. Medding, president; J. W. Van Valzale, secretary and treasurer; S. E. Phelps, manager. Organized, 1903, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par. Lands, 3 claims, area 60 acres, in the Upper Platte district, showing a 4' vein carrying carbonate ores and chalcopyrite, opened by a 75' shaft. Idle several years.

**WILLIAMS, FOSTER & CO. & PASCOE, GREENFELL & SONS, LTD. WALES.**

Office: Leadenhall Bldgs., Whittington Ave., London, E. C., Eng. Works office: Swansea, Glamorganshire, Wales. Property includes the Morfa copper works and Middle Bank copper works, at Swansea, both old and successful custom smelters.

**WILLIAMS LUMAN MINING CO.****WYOMING.**

Office: Buffalo, Wyo. Mine office: Depass, Fremont Co., Wyo. Employs

22 men. Thos. G. Smith, president and general manager; Theophilus Conzelman, vice-president; W. J. Thom, secretary and treasurer; preceding officers, Wm. Rea, Jr. and Richard Young, directors; M. E. Connell, superintendent. Organized May 2, 1908, under laws of Wyoming, with capitalization \$2,500,000, shares \$1 par; issued, \$2,000,000. On Sept. 1, 1908, company reported \$10,000 cash on hand, with \$113,200 cash due company, and no liabilities. Annual meeting, second Tuesday in September.

Lands, 9 claims, patented, area 130 acres, 16 miles from a railway, in the Copper Mountain district, showing 8 fissure veins, in granite, diorite and altered schists, main vein being an ore zone of about 50' to 60' width, traceable circa 3,400', in crushed and fissured diorite, much altered, with a 2' pay streak carrying free gold, copper ore and native copper in thin sheets and nuggets, the ores being cuprite, melaconite, malachite and chalcocite, returning 10 to 80% copper, 5 to 10 oz. silver and \$2 to \$8 gold per ton.

Development is by shafts of 52', 30' and 420', and by tunnels of 513', 300', 70' and 80', with circa 1,800' of workings. Equipment includes an 80-h. p. gasoline plant, with a 15-h. p. hoist and a 2-drill air-compressor. There are 12 mine buildings, of wood, including 16x20' and 14x16' shops.

Company plans deepening the shaft to 800', and making extensive openings, also adding an electric plant, taking current 16 miles from the Boysen dam. Company is operated as a close corporation, money for development being furnished by about 10 shareholders. Property considered promising.

#### **WILLIE ROSE COPPER MINING CO.**

**ARIZONA.**

Office and mine: Portal, Cochise Co., Ariz. M. D. Taylor, president; E. Towers, vice-president; C. F. McCord, secretary. Organized Jan. 28, 1908, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Mine has 2 shallow pits, of circa 20' depth, No. 2 showing a 12' vein carrying chalcocite, and lands have produced a 80-pound nugget of native copper.

#### **WILLOW CREEK COPPER & GOLD MINING CO.**

**WYOMING.**

Mine office: Thermopolis, Fremont Co., Wyo. Organized, early 1907, with capitalization \$500,000, by H. P. Minor, W. Armour Thompson, Robt. MacGowan, Edw. E. Waltman and H. H. Bierman.

#### **WILL SMELTING CO.**

**ARIZONA.**

Office: 509 Ft. Dearborn Bldg., Chicago, Ills. Operating office: 218 Fleming Bldg., Phoenix, Maricopa Co., Ariz. Works offices: Wickenburg, Maricopa Co., Ariz., and Quartzite, Yuma Co., Ariz. J. R. Deahl, president; Jos. Boyer, superintendent. Property includes 5,400 acres of placer claims near Quartzite, and a new-fangled dry-washing gold extractor, neither apparently of any particular promise. Has a general store and hotel at Wickenburg, with a 40-ton smelter at Wickenburg and a 50-ton smelter at Quartzite. Management is alleged to have sold 100,000 shares at 18½ cents per share to fiscal agents, who in turn handed them out to the public for 50 cents per share. Charges of mismanagement have been made, and a receiver asked for.

#### **WILMOT MINING CO.**

**MICHIGAN.**

Office: Calumet, Mich. Mine office: Ontonagon, Ontonagon Co., Mich. W. H. Garlick, president; W. B. Gouchie, secretary. Organized under laws of Michigan, with capitalization \$500,000, shares \$25 par. Has paid dividends of \$17,000, from sale of timber lands, with reservation of mineral rights, and has received \$1,500 from assessments. Lands are mineral rights to 3,520 acres, in Ontonagon County. No mining has been done.

#### **WILSON BAY MINING CO.**

**ALASKA.**

Office: Latouche, Latouche Island, Alaska.

#### **WILTON MINING & MILLING CO.**

**ARIZONA.**

Office: 615-87 Washington St., Chicago, Ills. Letter returned unclaimed from former mine office, Huron, Yavapai Co., Ariz. W. A. Buchanan, president;

**F. W. Park**, vice-president and secretary; **Victor Schill**, treasurer; **Milo Schill**, general manager; preceding officers and **Thos. McSteel**, directors. Organized 1902, under laws of Arizona, with capitalization \$1,200,000, shares \$1 par.

Lands, 3 claims, area 60 acres, in the Big Bug district, showing fissure veins carrying auriferous copper ore, opened by 4 shafts, deepest 50', and by a 220' tunnel, on the strength of which openings the company estimated 1,000,000 tons of \$50 ore blocked out, which is absolutely impossible. Has secured assays of 19.5% copper, 3 oz. silver and \$4.30 gold per ton. Is not favorably regarded. Presumably idle and moribund.

**WINDFALL MINING CO.****WASHINGTON.**

Mine office: Chewelah, Stevens Co., Wash. **C. T. Rigg**, superintendent. Has 2 tunnels, showing a 4' vein of auriferous and argentiferous lead and copper ore.

**WINDOW MOUNTAIN COPPER MINING CO.****NEW MEXICO.**

Office: 203 Broadway, New York, N. Y. Mine office: Deming, Luna Co., N. M. Employs 6 to 10 men. **E. D. Middlekauff**, president and treasurer; **John W. Fisher**, vice-president; **Harry C. Tilson**, secretary; **C. H. Clark**, manager; **C. H. Smith**, mine superintendent. Organized Apr. 4, 1908, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Stock is listed on the Joplin Stock Exchange. Annual meeting, second Thursday in June.

Lands, 16 claims, unpatented area 320 acres, also 40 acres of timber lands, 10 miles from a railroad, adjoining the Stimson mine and 2 miles south of the Castle Dome mine, in the Florida district. Property shows chalocite assaying 18% copper, 6 oz. silver and \$51.50 gold per ton, opened by tunnels of 30', 40' and 160'. A carload shipment of ore gave smelter returns of 17 to 34% copper. Property was worked, in a crude way, in early days, by Indians and Mexicans, who shipped some hand-picked silver-lead ore to San Francisco. Company plans continuous development.

**WINDSOR MINING & SMELTING CO.****ARIZONA.**

Mine office: Superior, Pinal Co., Ariz. Property is the Windsor and Lobb groups, near the Lake Superior & Arizona. Presumably idle.

**WINNEBAGO MINING CO.****COLORADO.**

Mine office: Central City, Gilpin Co., Colo. Has gold-silver copper ore.

**WINNIPEG MINES, LTD.****BRITISH COLUMBIA.**

Dead. Formerly at Phoenix, Boundary district, B. C.

**WINNIPEG MINING CO.****WASHINGTON.**

Mine office: Republic, Ferry Co., Wash. **E. R. Fraser**, general manager; preceding officer, **C. W. Clark**, Archibald Wright, **W. R. McCracken** and **Chas. Garber**, directors; **Jos. L. Lancaster**, superintendent. Lands, 8 claims, including the Hawkeye mine, adjoining the Belcher, on Lambert Creek. Mine has a 240' incline shaft, connecting with a 1,070' tunnel, showing a vein of 70' estimated width, carrying auriferous and argentiferous chalcopyrite, associated with considerable quantities of limonite, with smaller amounts of siderite, tetrahedrite, magnetite, pyrrhotite and marcasite. Has an ore-bin on the Belcher railway, 600' from the tower tunnel, facilitating shipment. Has electric power and an 8-drill Leyner air-compressor. First shipment, made circa August, 1907, returned about 3% copper, ore carrying 35 to 40% iron. Suspended operations December, 1907.

**WINONA COPPER CO.****MICHIGAN.**

Office: 713-199 Washington St., Boston, Mass. Operating office: Houghton, Mich. Mine office: Winona, Houghton Co., Mich. **Chas. J. Paino, Jr.**, president; **E. B. O'Connor**, treasurer; **Dr. Lucius L. Hubbard**, general manager; **Rex R. Seiber**, superintendent; **John Broan**, mining captain; **Frank Lukey**, clerk.

Organized 1898, under laws of Michigan, with capitalization \$2,500,000,

shares \$25 par; paid in, \$17. Assessments were \$100,000 in 1905; \$300,000 in 1906; \$200,000 in 1907; \$100,000 in 1908. Company ended 1907 with a surplus of \$67,052, and with 291,187 lbs. copper on hand. Is closely allied, in ownership and management, with King Philip Copper Co., under control of St. Mary's Mineral Land Co. Boston Safe Deposit & Trust Co., registrar; American Loan & Trust Co., Boston, transfer agent. Shares are listed on the Boston Stock Exchange. Annual meeting, last Tuesday in March.

Lands, 1,568 acres, in a main tract of 1,440 acres, and a smaller tract of 128 acres, main tract being in Sections 19, 20, 29 and 36, Town 52 North, Range 36 West, also timber rights to 1,768 acres lying 3 to 5 miles south of the mine. An exchange of equal parcels of land with the King Philip Copper Co., 1906, has given improved holdings to both properties. The company also owns a good millsite, at the mouth of the Misery river, with water available from that stream, and may build a mill in connection with King Philip Copper Co.

The main tract carries the outerop of the Winona amygdaloidal bed for upwards of one mile. The mine was discovered, 1864, by a line of prehistoric pits along the outerop, and a single shallow shaft was then sunk, but owing to entire lack of transportation facilities, little was accomplished. The property was let on tribute, 1880, but did not furnish sufficient mass copper to pay, and was closed, until taken over by the present company, April, 1898, when the old shaft was cut down, retimbered and deepened, and 3 new shafts sunk, on the Winona lode, an amygdaloidal bed running 12' to 46' wide, with an average width of circa 20', striking N. 59° E., and having an average dip of about 50°. The Winona amygdaloid resembles the Baltic lode in some respects, and also bears considerable resemblance to the Knowlton bed of the Evergreen belt, carrying considerable epidote, calcite and quartz, with a limited amount of mass and barrel copper, bulk of the metal being found as stamp-copper. Diamond-drill borings have located several other cupriferous beds on the Winona tract, but none carried copper in payable quantities, where cut.

The mine is served by a spur from the main line of the Copper Range railroad, which passes nearby.

The older workings show mainly mineral of the finer grades, with somewhat heavier copper at depth, and the best ground is to the south, underground conditions having improved during 1908. During 1907 the mine made 2,232' of new openings, and the mine ended 1908 with circa 5 miles of workings. Shafts Nos. 3 and 4 are connected on the 3d and 4th levels and during the first half of 1909 connections are to be made on several levels below, this territory showing considerable copper, the showing at the southern end of the mine being much the best. The mine has electric pumps, and runs about 1<sup>st</sup> drills.

No. 1, the discovery shaft, in the NE. ¼ of the NE. ¼ of Section 29, T. 52 N., R. 36 W., is 8x18' inside of timbers, with 3 compartments, and is 400' deep, with 4 levels opened, showing a little heavy copper and some stamp-rock in the northern drifts, but was of little promise, and has been idle since circa 1901.

No. 2 shaft, 900' northeast of No. 1, sunk at an angle of 72°, 1,000' deep, with 9 levels opened, shows good copper at depth of circa 200', but with poor ground below, and has been idle since early 1906. Equipment at No. 2 includes a hoist good for 1,500' depth.

No. 3 shaft, 1,650' southwest of No. 2, is bottomed at the 13th level. The 3d and 4th levels have been extended to No. 4 shaft, a distance of 1,700', showing alternations of good and poor ground. The openings, as a whole, were estimated to show rock carrying 15 to 18 lbs. fine copper per ton, allowing for judicious stoping and reasonable selection of ground broken, but probably

should be estimated at 12 to 15 lbs. copper per ton. Work was discontinued, late 1908, the shaft having sufficient opening for the present.

Equipment at No. 2 shaft includes a steel shaft-rockhouse, 40x70' on the ground, 106' high, remodeled and improved, 1908, equipped with two 24x36" Portage Lake Farrell crushers and room for a third, pneumatic steel gates, pneumatic trolley cranes, and grizzlies having differential slopes, lower portions being quite flat, grizzlies feeding to crushers, with only one man required for each crusher.

No. 4 shaft, circa 1,700' southwest of No. 3 and about 400' from the southern boundary, started June, 1906, is sunk on ground secured from the King Philip in rectifying lines. The shaft is sunk in the footwall, and was opened by simultaneously sinking and raising. This shaft was showing good ground, at the end of 1908. Equipment includes a steel shaft-rockhouse with two 24x36" Portage Lake Farrell crushers, similar to those at No. 3.

Old No. 3 shaft, 900' north of No. 2 and about 750' deep, shows little ground of promise, and has been idle for some years. Old No. 4 shaft, the northernmost, about 1,350' northeast of No. 1, found nothing of importance and also has been idle for some years. Old No. 5 shaft, started on a wide amygdaloidal bed located by diamond-drill, did not develop good ground, and was discontinued at slight depth, some years ago.

The central power plant, between shafts 3 and 4, has an Allis-Chalmers 2,300-volt 3-phase 60-cycle cross-compound generator, providing an alternating current, with a 535-h. p. induction motor direct-connected to two 250-h. p. direct current generators, speeded for 600 revolutions per minute, delivering direct current to No. 4 shaft of the Winona and No. 1 shaft of the King Philip, each shaft having a 200-h. p. motor geared to the hoisting drum, each hoisting motor having a variable speed of 150 to 1,200 revolutions per minute. No. 4 shaft has an electric hoist good for 1,500' depth, operating two 3½-ton skips, working in counterbalance, at a speed of 1,200' per minute. The motor generator set has 2 flywheels, of 20 tons weight each, their momentum caring for variations in load, and also providing power for hoisting, for one hour after the dynamo is closed down, if necessary. The electric generator set has 2 bearings of 11x33", and 2 bearings of 9x27", with oil pumped through them at the rate of 16 gallons per minute, automatically filtered and water-cooled, insuring perfect lubrication. The central power-house also has a 40-drill Nordberg air-compressor.

The engine-house, located midway between shafts Nos. 1 and 2, is 40x40', of steel frame on stone foundations, with corrugated iron siding and roof, having a steam hoist, good for 1,500' depth, operating shaft No. 2, and the electric hoist previously described for shaft No. 3, also an Ingersoll-Sergeant 12-drill class A 2-stage straight-line air-compressor, and a smaller single-stage compressor. Adjoining is the boiler-house, 40x48', of steel frame on stone foundations, with iron siding and roof, housing four 80-h. p. boilers. There is a wooden coal-trestle, with tunnel beneath, leading to the boiler-house.

The mine buildings include a 20x40' carpenter-shop, combination smithy and machine-shop, 22x34' general store, an office building, 2 boarding-houses and nearly 100 dwellings for employees, the dwellings being in a townsite platted by the company. There also is a sawmill, 30x70', with a 42x66' wing for boilers, and a 16x48' wing containing a shingle-mill, the plant having a daily capacity of 20,000' of sawed lumber.

Production has been as follows: 1,036,944 lbs. fine copper in 1903; 646,025 lbs. in 1904; nothing in 1905; 278,182 lbs. in 1906; 1,285,863 lbs. in 1907; nothing in 1908. For 1904 returns averaged 18.95 lbs. fine copper per ton of rock stamped. Production was resumed, with a leased head, at the Adventure mill, October, 1906, in which year 19,399 tons of rock stamped returned an average

of 14.34 lbs. fine copper per ton. Returns, 1907, were 12.59 lbs. fine copper per ton, and production was suspended, November, 1907, on account of the break in the price of the metal. Copper is sold through the Calumet & Hecla Mining Co.

The Winona has proven somewhat disappointing to date, as it was generally held, locally, to be one of the best prospects in the Lake Superior district, before being taken over by the present company. The management is strong and experienced, and the property is being given every opportunity that can be afforded by thorough equipment, technical skill, and economical administration.

#### **WINONA GOLD-COPPER MINING CO.**

**WYOMING.**

Office: 210 Mercantile Bldg., Denver, Colo. Mine office: Cody, Big Horn Co., Wyo. L. Cavnah, president; Geo. E. House, vice-president; D. J. A. East, second vice-president; Wm. H. McAloney, secretary and treasurer; Hon. N. C. Miller, general manager; preceding officers, Henry F. Power, Jas. Lippincott, W. H. Lippincott and G. G. Hodge, directors. Organized under laws of Wyoming, with capitalization \$5,000,000, shares \$1 par. Management was changed and company practically reorganized, Dec. 12, 1905.

Lands, 22 claims, area 404 acres, on Silver Creek in the Bear Tooth and Sulphur Mountains, of the Sunlight district, in the northwestern corner of Big Horn county, about 12 miles east of the Yellowstone National Park, well timbered, with water power available, showing porphyry and andesite dykes, with well mineralized quartzite veins of 10' to 25' estimated average width, carrying auriferous and argentiferous chalcocite, bornite and chalcopyrite, said by old management to give assays of 15 to 52% copper, 11 to 15 oz. silver and about \$1 gold per ton, and said by new management to give assays of 10 to 56%, with an average of upwards of 40% copper, and \$10 to \$20 combined gold and silver values per ton, presumably from carefully selected samples. Has 2 tunnels, No. 2 being 254' in length at last accounts, planned to prove the ore system at depth. Property considered promising by Prof. H. C. Beeler, State Geologist of Wyoming. Apparently idle except for assessment work.

#### **WINONA-REX COPPER MINING CO.**

**WYOMING.**

Office: Winona, Minn. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. John Ludwig, president. Idle several years and apparently moribund.

#### **WINTHROP MINE.**

**MICHIGAN.**

Owned by Frontenac Mining Co.

#### **WISCONSIN & ARIZONA MINING CO.**

**ARIZONA.**

Office and mine: care of M. H. Ryan, president and superintendent, Prescott, Yavapai Co., Ariz. J. L. Jacquot, vice-president; E. G. Jones, secretary; Dr. Donald McIntyre, treasurer. Organized December, 1904, under laws of Arizona, with capitalization \$1,000,000, shares \$1 par. Lands, 5 claims, known as the Copper King group, 4 miles north of Poland. Has shafts of 35', 35' and 50', also a short tunnel showing a 5' vein carrying 6" stringers of high-grade auriferous and argentiferous ore. Presumably idle.

#### **WISCONSIN MINING & MILLING CO.**

**IDAHO.**

Dead. Formerly at Elk City, Idaho Co., Idaho.

#### **WISCONSIN MONTANA MINING CO.**

**MONTANA.**

Office: Downing, Wis. Mine office: Superior, Missoula Co., Mont. Employs 3 men. A. O. Nichols, president and general manager; D. McDonald, vice-president; D. C. Coolidge, secretary; Dr. P. A. Beebe, treasurer; preceding officers and J. DeWilde, directors; Frederick V. Phinney, engineer. Organized Jan. 29, 1906, under laws of Wisconsin, with capitalization \$50,000, shares 5 cents par; issued, \$36,820. Annual meeting, first Tuesday in February.

Lands, 6 claims, area 120 acres, and a 5-acre millsite, in Town 15 North, Range 25 West, one mile from the Missoula river and about 11 miles up the river from Superior. Property shows 2 fissure veins, in quartzite, estimated by company as of 70' average width, carrying azurite and chalcopyrite giving assays of 2 to 25% copper, opened by a 24' shaft and by tunnels of 75', 700', 200', 38' and 35'. Company plans continuous development.

**WISCONSIN-WYOMING COPPER MINING CO.**

WYOMING.

Dead. Formerly at Encampment, Carbon Co., Wyo. Described Vol. VI.

**WISSENBERG-BERG-UND HÜTENWERKE**

GERMANY.

**AKTIEN-GESELLSCHAFT.**

Office: Köln, Germany. Mine office: Wissen-am-Sieg, Rheinprovinz, Germany. Capitalization, 8,000,000 marks. Is an extensive producer of iron ore, 1902 output having been 109,483 metric tons of spathic iron ore and 1,092 metric tons of ore of 10% copper tenor. Employs circa 1,000 men.

**WIZARD COPPER MINING CO.**

WASHINGTON.

Mine office: Chewelah, Stevens Co., Wash. L. Bryant, manager; H. A. Van Buskirk, superintendent. Property shows a vein of 25' estimated width, carrying a 3' paystreak of smelting ore, balance consisting of ore of concentrating grade.

**WOLCOTT COPPER MINING CO.**

VERMONT.

Mine office: Wolcott, Lamoille Co., Vt. Organized, circa 1900, with capitalization \$500,000, shares \$1 par. Idle several years and apparently moribund.

**WOLF CREEK COPPER MINING CO.**

MONTANA.

Office: Spokane, Wash. Mine office: Wolf Creek, Lewis & Clark Co., Mont. R. E. Vincent, A. M. Baldwin and P. S. Duchemin, directors. Mine has a tunnel, said to show a 14' vein of ore carrying 20% copper.

**WOLFRAM COPPER CO.**

ARIZONA.

Office: care of Benj. Blanchard, general manager, Prescott, Ariz. Mine office: Parker, Yuma Co., Ariz. Presumably idle.

**WOLVERINE & ARIZONA DEVELOPMENT CO.**

ARIZONA.

Dead. Reorganized, March, 1904, as Wolverine & Arizona Mining Co. Formerly at Bisbee, Cochise Co., Ariz. Very fully described Vol. IV.

**WOLVERINE & ARIZONA MINING CO.**

ARIZONA.

Office: Laurium, Mich. Mine office: 61 Mason Hill, Bisbee, Cochise Co., Ariz. John Daniell, president; Paul P. Roehm, vice-president; Edw. Ulseth, second vice-president; W. Frank James, treasurer; preceding officers, Chas. Chynoweth, Benj. F. Chynoweth, W. H. Brophy, Fred C. Smith and Michael J. Cunningham, directors; Hon. Wm. R. Oates, secretary; W. H. Roberts, Jr., superintendent.

Organized March, 1904, under laws of Arizona, as successor of Wolverine & Arizona Development Co., with capitalization \$3,000,000, shares \$15 par; issued, 97,156 shares, par value \$1,457,340, subject to assessment, and 21,792 shares, par value \$326,880, of full paid stock. Levied 25-cent assessments March 19, 1906, Sept. 17, 1906, June 17, 1907, and Nov. 18, 1907. Annual meeting, third Wednesday in November.

The preceding corporation, the Wolverine & Arizona Development Co., raised and disbursed \$223,433.93. Receipts of present company, to Dec. 31, 1906, were \$148,522.73, and for 11 months ending Jan. 1, 1907, disbursements were \$46,289.37. For fiscal year 1908, receipts were \$27,131.32, with expenditures of \$22,581.31, leaving a cash balance of \$4,550.01.

Lands, 9 claims, area circa 160 acres, known as the Cairo, Memphis, Kentucky, Georgia, Louisiana, Chicago, Warren, George and Broken Promise. The Georgia claim lies 600' from lands of the Calumet & Arizona, and is about 3,000' from the Irish Mag shaft of that company, and from the Spray and Holbrook

shafts of the Copper Queen. The Uncle Sam and White Tail Deer claims of the Copper Queen are adjacent to the Wolverine & Arizona, and good ore was taken by leasers from the White Tail Deer claim, about 800' from the Wolverine shaft. Final payments on lands were made Jan. 30, 1907.

The company conducted extensive exploratory work on the Broken Promise claim, which proved true to its name. The shaft on the Broken Promise claim is 700' deep, with 3 compartments, each 5'x4'6", well timbered, cutting limestone showing considerable iron. The shaft proved very wet, at depth, and has Nos. 7 and 9 Cameron sinking pumps, and a 500-gallon station pump. A drift on the 500' level, running 850' toward the Pittsburg & Duluth group of the Superior & Pittsburg Copper Co., has cut leached ore and ledge matter carrying traces of copper. Drifts running in other directions have shown leached ore, in encouraging quantities, but no ore of workable grade was developed, from the Broken Promise shaft, until 1908, when a drift cut an 18" vein of silver-lead ore, estimated at \$56 value per ton, near the centre of the Warren, or Bootleg, claim. Management plans continuing the drift, 1909, into and through the George claim, in the hope of finding oxidized ores that should lie above the sulphide ore bodies found in the Shattuck-Arizona mine, adjoining. During 1908 work was confined to extending the 300' level drift to length of circa 2,000', work being suspended on the 500' level, to avoid water, which apparently is a mistaken policy, as the principal ore bodies must be gone after at depth.

The lands of the Wolverine & Arizona lie partly on the high hill west of Bisbee, but development was begun on the talus of the 500' mural escarpment which forms the western side of the hill. Exploratory work to the west of the cliff proving disappointing, diamond drill borings of 2,694' aggregate depth were made, 1906, on the hill, the last hole, at depth of 410', passing through 50' of oxidized ore, of 4 to 10% copper tenor. The ore body so located being inaccessible from the Broken Promise shaft, except under tremendous disadvantages, arrangements were made for use of the Higgins tunnel, on the Twilight claim, reaching this ground from the Bisbee side of the hill, as the ore found was located on 2 claims near the Shattuck-Arizona. Under this arrangement the old Higgins tunnel was extended 310' through Higgins ground, to the Wolverine boundary, and was continued in a southerly direction, on Wolverine lands, during 1908. The nearest workings of the Broken Promise shaft are circa one-half mile distant, and about 500' lower. An incline was started, October, 1907, at a distance of circa 2,700' from the portal of the Higgins tunnel, and, during 1908, a body of oxidized ore, of about 8% average copper tenor, was proven by 497' of workings, estimated to show 150,000 tons of ore, averaging circa 7% copper, which estimate seems unduly high, but it was estimated, at end of 1908, that these workings exposed circa \$500,000 worth of ore, which estimate seems warranted.

Equipment includes a 260-h. p. steam plant, with 2 single-drum hoists and a 6-drill air-compressor. Buildings include a 25x50' engine-house and office, bunk-house, boarding-house and a 10,000-gallon water-tank, water being pumped from Naco, 8 miles distant. All surface improvements are at the Broken Promise shaft.

Property is considered valuable, but the management should buckle down to business, and go after the ore in earnest, on a broad basis of operations, instead of confining operations to desultory exploratory work, maintained by the levying of irritating 25-cent assessments at irregular but frequent intervals. The Wolverine & Arizona has the makings of a mine, but it will require work, and cash to pay for it, to develop the property from a promising prospect to a regular producer.

**WOLVERINE COPPER MINING CO.****MICHIGAN.**

Office: 15 William St., New York, N. Y. Mine office: Kearsarge, Houghton Co., Mich. Employs circa 500 men. Jos. E. Gay, president; J. Wheeler Hardley, secretary; John R. Stanton, treasurer; preceding officers, C. R. Corning and Samuel L. Smith, directors; Fred Smith, superintendent; Willard J. Smith, assistant superintendent; Chas. L. Noetzel, clerk; Barney S. Shearer, mill superintendent; Wm. Pollard, mining captain; F. Wm. Hartmann, engineer; A. B. Holtenhoff, master mechanic.

Organized 1890, under laws of Michigan, with capitalization \$1,500,000, shares \$25 par. Company owns \$80,000 stock in the Michigan Smelting Co. Fiscal year ends June 30th. Adams Trust Co., Boston, registrar; American Loan & Trust Co., Boston, transfer agent. Annual meeting, first Monday in August.

First dividend was paid Oct. 1, 1898, and 21 dividend disbursements, to end of 1908, aggregated \$5,100,000. Recent dividends, for calendar years, have been as follows: \$330,000 in 1903; \$450,000 in 1904; \$660,000 in 1905; \$1,020,000 in 1906; \$1,050,000 in 1907; \$600,000 in 1908. Net earnings for fiscal years have been as follows: \$557,240 in 1904; \$741,334 in 1905; \$1,007,820 in 1906; \$1,703,304 in 1907; \$1,244,443.71 gross and \$559,402.17 net earnings in 1908, company ending that fiscal year with a surplus of \$811,629.22.

The Wolverine mine was opened, 1882, by local capital, but was not successful, and the company was reorganized, 1890, with present title and management, when new machinery was secured and work resumed. The previous ill-success of the mine rendered investors dubious of its future, and cash for its development was secured with difficulty. Lack of funds imperatively demanded for the operation of the property was met by the late John Stanton, with a heavy loan, advanced from his own pocket, at a time when other shareholders were unwilling to risk a dollar, and it is due to Mr. Stanton's courage that the Wolverine now is, in proportion to its size, the most profitable copper mine in the Lake Superior district. Under Mr. Stanton's management milling was discontinued immediately, and was not resumed until 18 months of underground development had given adequate reserves of stamp-rock. By reason of the sound policy pursued, the mine began making small profits from 1892, when stamping was resumed.

Lands, 320 acres, being 280 acres freehold, and 40 acres of mineral rights adjoining the main tract, lands carrying 3,100' of the strike of the Kearsarge amygdaloidal bed, on which the mine is opened. Neighboring properties are the North Kearsarge on the north, Mayflower on the east, Mayflower and South Kearsarge on the south, and Centennial on the west.

The Kearsarge bed, on the Wolverine property, averages about 16' in width, and this is the richest amygdaloidal mine in the Lake Superior district, and is second only to the Calumet & Hecla in richness among all Lake Superior copper mines. The upper workings were lean, returning 16 to 17 lbs. fine copper only, 1892, but no stoping is in progress above the 15th level, below which the lode shows little or no diminution of values with depth. All lower levels are opened at 100' intervals, some of the upper levels being opened at 75' to 80' intervals. All shafts are sunk at an angle of 41°, and all skip-tracks have been given cross-ties, in place of longitudinal stringers, following the plan introduced in the Calumet & Hecla, which unquestionably is an improvement; as it permits the use of a cheaper grade of timber, and allows quicker repairs. For fiscal year 1908 the mine made 5,255' of new openings. Owing to the uniformity of the cupriferous bed, all levels, from the first to the 23d, inclusive, are opened through the entire property, connecting all 4 shafts to bottoms of Nos. 1 and 2, and connecting Nos. 3 and 4 only below the 17th level. Man-cars are

installed in shafts Nos. 2, 3 and 4. About one mile of new stoping is made yearly, with ground blocked out for about 6 years production, at rate of 10,000,000 lbs. fine copper yearly, with between 20 and 25 years of life ahead of the mine. About 30 power drills are employed, of which two-thirds are stoping, and one-third are employed in opening work.

Lying about 80' west of and parallel with the Kearsarge bed, is the West lode, opened by a crosscut on the 11th level. A little work was done on the West lode, 1903, and one excellent stope was opened, but the prospects of making a paying mine on this bed are not especially bright, as it would be contrary to precedent were two parallel beds so close together to be found payable. An exploratory crosscut, on the 14th level, driven 8,000' across the formation, both east and west from the workings on the Kearsarge bed, reached as far west as the Kearsarge conglomerate, which was absolutely barren, where cut, though it is known to carry some copper on the Ahmeek and Seneca properties, to the northward. The west lode gave a little encouragement in the 14th level crosscut, and may be tested further, in the future.

The mine has 5 Knowles electric pumps, of which 3 are in No. 2 shaft, with one each in No. 3 and No. 4, three of these pumps having an average lift of more than 1,000' each. Current is taken from the Houghton County Electric Light Co., and the electric pumps have given much relief to the air-compressors. The mine has the Johnson electric hoisting signal system, being the first Lake Superior copper property to use electric signals throughout.

The system of underground rock-handling, introduced circa 1905, saves confusion and cash. Tram-cars to the average number of 10 are kept on each level. Trammers leave the full cars at the shaft, and 2 men attend to the dumping in each shaft, these starting at the topmost level where stoping is in progress, and working downward, dumping all loaded cars on each level, in order, then riding, on skips, to the topmost producing level, and repeating the work. By this system, all signaling in each shaft is in the hands of 2 men, and the engineers in charge of the hoists know exactly what is going on underground.

No. 1 shaft, near the Kearsarge line, shafts being numbered from north to south, ran into the boundary at shallow depth; and, tributary ground being worked out, the shaft was abandoned, some years ago.

No. 2 shaft, next south, permanently bottomed at the boundary, at depth of 1,700', is used exclusively for handling men and supplies. The engine-house has a duplex-cylinder hoist with straight-face drum.

No. 3 shaft, sunk in the footwall, ended 1908 bottomed at the 25th level, and can be sunk to depth of 4,800', owing to exchange of lands between the Wolverine and the North Kearsarge mine of the Osceola Consolidated. The wooden shaft-rockhouse, burned March 3, 1908, has been replaced by a steel structure, duplicating that of Mohawk shaft No. 4, in design and equipment. This shaft has an engine-house with duplex-cylinder hoist having straight-face drum.

No. 4 shaft, bottomed on the 30th level, at the end of 1908, is sunk 45' in the footwall, to guard against drawing. Equipment includes an engine-house, of mine rock with red sandstone trimmings, built 1906, housing a 14x60" Nordberg duplex-cylinder hoist, with double-conical drum having a maximum diameter of 18'; capable of raising 4-ton skips from one mile depth, with 1½" steel cable. The hoist is a duplicate of that at Mohawk No. 4 shaft. The Bullock hoist formerly at No. 4 was sold to the Mohawk. No. 4 engine-house also has a large electric transformer.

Principal mine buildings are at No. 4 shaft, where there are 20-drill and 22-drill Rand air-compressors, and a boiler-house with 3 Stirling water-tube

boilers, American automatic stoker and Green fuel economizer. At No. 3 there is a model changing-house. There is a private telephone system, with 20 instruments, connecting the underground pump-stations and principal buildings on surface, with the central exchange in No. 3 engine-house. The company maintains a 52-bed hospital, with medical and surgical staff, for employes and their families. The company owns a large number of substantial dwellings, and the mine location is exceptionally neat and prosperous in appearance.

Rock is transported to mill by the Mohawk & Traverse Bay railroad, with a down-grade haul of 13 miles.

The mill, completed 1902, is near the mouth of Tobacco River, on Traverse Bay, Lake Superior, adjoining the Mohawk mill, both served by a single pump, and managed by a joint superintendent. The mill, 180x206' in size, of steel on stone foundations, standing 37' above the lake level, has 2 Nordberg heads, each of circa 550 tons daily capacity, at 110 blows per minute. It has been decided to compound both heads, and work on the first was under way, late 1908. The mill makes extensive use of Wilfley tables, and has a completely appointed machine-shop. Mineral from the heads and wash is sluiced to the basement through iron pipes, going for reduction to the works of the Michigan Smelting Co., at Houghton. To care for tailings there has been installed a Jackson tailings system, which provides for the settling out of water and stacking of tailings, 800' from the mill, by a belt-conveyor. A practically similar system, at the Mohawk, has given very good results.

The boiler-house, just south of the mill, is 42x58', with stone walls and steel truss roof, housing a battery of 200-h. p. Stirling water-tube boilers, fitted with automatic stokers. Coal goes through a lump-crusher, thence to hoppers having 24 hours' storage capacity.

The pump-house, owned and operated jointly by the Wolverine and Mohawk, has a 20,000,000-gallon Snow horizontal triple-expansion pump, with 18", 33" and 54" steam-cylinders, and 22" water plungers, with 36" stroke. There is an 8,000,000-gallon Nordberg triple-expansion water-end pump, with 3 plungers, used as an auxiliary. The pump-house is located on the river, near its mouth, the intake pipe being protected by timber cribs running 300' into the lake, preventing clogging from floating bark and anchor ice.

In connection with the mills there is a wharf, owned jointly by the Wolverine and Mohawk, fitted with coal-hoists. A 40-acre townsite, platted near the mills, is named Gay, in deserved honor of Jos. E. Gay, the president of the company, long and honorably identified with honest and successful copper mining enterprises of the Lake Superior district.

Production for recent years has been as follows: 9,024,034 lbs. in 1903; 9,764,455 lbs. in 1904; 9,464,418 lbs. in 1905; 9,681,708 lbs. in 1906; 9,272,351 lbs. in 1907. For fiscal year 1908, the mine hoisted 367,795 tons of rock and discarded 18,935 tons, or 5.15%, stamping 348,860 tons, which yielded 12,117,000 lbs. mineral that returned 9,356,123 lbs. fine copper, an average return of 1.341%, or 26.82 lbs. fine copper per ton. Costs for fiscal year 1908, were \$1.62 per ton for rock hoisted, and \$1.71 per ton for rock stamped, and finished copper was made for 6.379 cents per pound, at the mine, with total costs of only 7.321 cents per pound, rendering the Wolverine the lowest cost copper producer of Lake Superior. The management of the Wolverine is as good as that of any mine in operation.

#### WOLVERINE MINING CO.

UTAH.

Dead. Was wound up, by receiver, circa 1908. Formerly at Park City, Summit Co., Utah. Fully described Vol. VI.

#### WOLVERINE MINING & LEASING CO.

COLORADO.

Office: Niles, Mich. Mine office: Pearl, Larimer Co., Colo. W. S. Leland,

president; Edwin Miller, vice-president; Dr. Z. L. Baldwin, secretary; Burr T. Lobdell, chairman executive committee. Is a development company, composed of shareholders of Coldwater Copper Mining Co., and took over the Coldwater mine, circa 1903, under a 3 to 5 year lease. Idle and apparently moribund.

**WOLVERINE & WESTERN DEVELOPMENT CO. OREGON.**

Dead. Formerly at Roseburg, Douglas Co., Ore. Described Vol. VI.

**WONDERFUL MINING CO.**

**IDAHO.**

Letter returned unclaimed from former mine office, Mullan, Shoshone Co., Idaho. Lands, on the eastern slope of Stevens Peak, have a 900' crosscut tunnel, cutting a vein said to give a fair showing of galena and copper ore.

**WOOLLEY MINING CO.**

**ARIZONA.**

Mine office: Kelvin, Pinal Co., Ariz. Lands were 17 claims, between the Saddle Mountain and Troy-Manhattan, held under a \$60,000 bond and lease. Idle and presumably out of business.

**WORLD'S FAIR MINE.**

**ARIZONA.**

Office: care of Frank & Josephine Powers, owners, Nogales, Ariz. Mine office: Patagonia, Santa Cruz Co., Ariz. Lands, 13 claims, near Harshaw, south of Patagonia, in the eastern end of the Salero Mountains. The mine has a 600' main shaft, with about 2 miles of workings, on an 8' ore body, showing mainly highly argentiferous lead carbonates and sulphides near surface, changing at depth to argentiferous copper sulphides. Property has been a shipper, since circa 1893, of high grade ore, in carload lots, ores ranging in value from \$250 to \$350 per ton, one 20-ton carload returning \$15,000. Mine is popularly reputed to have produced upwards of \$500,000 worth of ore. Production, 1907, was 16,733 lbs. fine copper, 106,627 oz. silver and 25 oz. gold. Suspended operations Oct. 5, 1907, on account of low price of copper and silver.

**WORLD'S FAIR MINING CO.**

**ARIZONA.**

Dead. Lost lands to former owner, Frank Powers. Formerly at Patagonia, Santa Cruz Co., Ariz.

**WRIGHT & LAWRENCE MINING CO.**

**CALIFORNIA.**

Office: 8 Jackson Blvd., Chicago, Ills. J. T. Fortin, president; C. Borchart, vice-president; A. W. Nelson, secretary; Alex J. Liljestrom, superintendent and general manager. Capitalization \$1,500,000, shares \$1 par. Lands, 16 claims, area 220 acres, in the Doyle district of Riverside county, California, said to have about 250' of workings. Was a mere bit of rotten stock-jobbery, as promoted, but present management apparently was not responsible for the deliberate swindles perpetrated by the original officers. Property not regarded favorably.

**WRIGHT-RUSSELL COPPER MINING CO.**

**WYOMING.**

Office: 109 South 11th St., Lincoln, Neb. Letter returned unclaimed from former mine office, Battle, Carbon Co., Wyo. J. H. Westcott, president; W. H. Dorgan, vice-president; John P. Dorgan, secretary; John B. Wright, treasurer; H. M. Rice, general manager. Capitalization \$1,000,000. Idle and apparently moribund.

**W. S. FLETCHER MINING & SMELTING CO. ARIZONA & CALIFORNIA.**

Dead. Was succeeded, March, 1905, by Arizona-Mexican Mining & Smelting Co. Formerly at Kingman, Mohave Co., Ariz., and Needles, San Bernardino Co., Cal. Described Vol. V.

**WYACCA MINE.**

**AUSTRALIA.**

Office: care of E. Pearce, Broken Hill Chambers, Adelaide, South Australia. Mine office: Blinman, Flinders Co., South Australia. Lands are in the Hundred of Basedow, in the Flinders range, 8 miles southwest of the Blinman mine, and about 260 miles north of Adelaide. Vein ranges 1" to 26" wide,

carrying cuprite, melaconite and chalcopyrite, in a gangue of calespar and spathic iron. Idle some years.

**WYANDOT COPPER CO.**

**MICHIGAN.**

Office: 68 Devonshire St., Boston, Mass. Operating office: Houghton, Mich. Mine office: Winona, Houghton Co., Mich. Employs 25 men. John C. Watson, president; M. A. O'Neil, vice-president; Chas. E. Adams, secretary and treasurer; preceding officers, Jos. Dorr and Matthew Van Orden, directors; Frank L. Van Orden, superintendent; Louis LaRochelle, mining captain. Organized Feb. 3, 1899, under laws of Michigan, with capitalization \$2,500,000, shares \$25 par; paid in, \$8. Has levied assessments of \$200,000 since organization. Disbursements, for fiscal year ending March 30, 1908, were \$25,905, leaving cash assets of \$37,144.17, with liabilities of \$1,834.17. Shares are listed on the Boston Stock Exchange. State Street Trust Co., Boston, registrar; Federal Trust Co., Boston, transfer agent. Annual meeting, second Monday in May.

Lands, 1,065 acres, adjoining the Winona, in Sections 16, 20 and 21, Town 52 North, Range 36 West. Exploratory work, begun February, 1899, has been continued uninterruptedly, though hampered by the great disadvantage of a heavy overburden. Early work was done in search of the Winona amygdaloidal bed, and efforts were made later to locate the southern extension of the Baltic lode, after which attention was turned again to the Winona bed, and latterly has been directed toward locating the extension of the Lake bed. Average strike of the Keweenawan formation is N. 53° E., with average dip of 65°, and the Wyandot lands carry the strike of the beds for about 1½ miles. The mine has 11 shafts, some of which are merely pits, with 2 shafts of considerable depth.

No. 1 shaft, 1,000' deep, located in the SE. ¼ of Section 21, Town 52 North, Range 36 West, is sunk in the footwall of the Winona bed, with a parallel underlying amygdaloidal bed 60' distant, both broken, and of small promise, though showing occasional patches of well mineralized ground.

No. 11 exploratory shaft, 8x10', inside measurement, was sunk 350' on a vein paralleling the Winona lode, at a distance of 1,200'. This lode gave encouragement, when first opened, and diamond-drill holes gave good cores, but work was suspended, until 1907, when the shaft was unwatered and deepened. This shaft, located in the SE. ¼ of Section 21, Town 52 North, Range 56 West, was deepened, 1908, to 700', and a crosscut, driven to the southeast, passed, late 1908, through an epidotal amygdaloid of circa 50' width, carrying finely disseminated copper of promising appearance. There also is a footwall chute of 6" to 4' width, heavily mineralized, where cut. The epidotal bed, at the end of 1908, had about 100' of drifting, and gave an encouraging showing of copper. The bed, apparently about 24' in width, showed very little copper until the footwall was reached, where there was found 6" to 12" of heavy mass and barrel copper, at the point cut, but drifts north and south show copper more evenly disseminated through the bed, mainly as stamp-copper, rather than barrel work. The showing at this point is much the best that the Wyandot ever has secured.

Miscellaneous work of the past included a 102' shaft sunk on a lean cupriferous conglomerate underlying the Winona bed; a 300' shaft sunk on an amygdaloid identified as the Elm River, which gave no promising ground, and some work was done also, 1904-1905, on the Misery River lode, in Section 16, Town 52 North, Range 36 West, on a 20' amygdaloid carrying fine copper, but nothing of value was developed at this point.

In addition to underground work, extensive diamond-drill borings have been made, and drilling was in progress at the end of 1908, with holes pitched at an angle of 55°, and further drill work is planned to be carried on, in Section

16. Several years ago Section 28, Town 52 North, Range 36 West, was optioned, and a vertical shaft sunk near the west quarter post, to depth of 250', and crosscuts driven in both directions, with a total of about one-half mile of workings. The horizon of the Baltic lode was crossed in this work, but the bed was found highly altered, as was the whole country in the neighborhood. Diamond drilling, 1904, gave a core, showing a little copper, from the hypothetical horizon of the Lake lode, but this was not considered important at the time. The ground is being gone over again, with a diamond-drill, and efforts will be made to locate the extension of the Lake bed and give it such test as circumstances may warrant.

Equipment includes a Lidgerwood hoist, good for 1,000', one Ingersoll-Sergeant and 2 Rand air-compressors, of 12 drills aggregate capacity, and boilers. Buildings include a machine-shop, smithy, warehouse, barns and about 12 dwellings. The Wyandot has worked faithfully, for a decade, under most discouraging circumstances, but with great economy and persistence, and the showing secured at the end of 1908 was much the best in the history of the property.

#### **WYOMING & ALABAMA MINING CO.**

**WYOMING.**

Dead. Formerly at Tie Siding, Albany Co., Wyo.

#### **WYOMING CONSOLIDATED COPPER CO.**

**WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo.

#### **WYOMING COPPER CO.**

**WYOMING.**

Office: Jackson, Mich. Letter returned unclaimed from former mine office, Encampment, Carbon Co., Wyo. Lands are on upper Cow Creek. Idle and apparently moribund.

#### **WYOMING COPPER & GOLD MINING CO.**

**WYOMING.**

Office: Alma, Kan. Mine office: Encampment, Carbon Co., Wyo. C. B. Henderson, president and manager; J. R. Henderson, secretary and treasurer. Organized under laws of Arizona, with capitalization \$1,500,000, shares \$1 par. Lands are said to have shown ore, from the Metal Chief vein, assaying 65% copper. Idle several years.

#### **WYOMING COPPER & MINING CO.**

**WYOMING.**

Office: 115 Dearborn St., Chicago, Ills. Letter returned unclaimed from former mine office, Rawhide Buttes, Laramie Co., Wyo. Mark E. Bennett, president; Edwin Hall, vice-president and general manager; W. M. Gager, secretary. Organized Nov. 17, 1905, under laws of Wyoming, with capitalization \$500,000, shares \$1 par.

Lands, 35 claims, area 700 acres, in the unorganized Rawhide Buttes district, also 100 acres timber lands, showing country rocks of quartzite, schist and limestone, said to carry 14 contact veins, of which 4, of 5' average width, are opened by shafts of 30' and 245', showing malachite and azurite above, with sulphides in the lower workings, giving average assays of 8% copper, 4 oz silver and \$3 gold per ton. Mine has 810' of workings, estimated to show 20,000 tons of ore. Equipment includes a 40-h. p. steam plant, with hoist and 4-drill air-compressor, and 4 mine buildings. Nearest railroad is the Chicago & Northwestern, 12 miles distant. Idle.

#### **WYOMING GOLD & COPPER MINING CO.**

**WYOMING.**

Office: Salt Lake City, Utah. Mine office: Lusk, Converse Co., Wyo. Organized 1906, under laws of Utah. Lands, 3 claims, circa 18 miles south of Lusk, in the northern part of Albany county, said to have a 30' shaft, showing an ore body assaying 16% copper, with gold values.

#### **WYOMING MINING CO.**

**WYOMING.**

Mine office. Kirwin, Big Horn Co., Wyo. Titus Sheord, president; B. F.

Brown, secretary; C. A. Tewksbury, superintendent. Has auriferous and argentiferous copper ores. Idle.

**WYOMING QUEEN MINING CO.**

**WYOMING.**

Office: Laramie, Wyo. Mine office: Jelm, Albany Co., Wyo. Louis Miller, president, treasurer and general manager; L. A. Hancock, secretary; preceding officers, C. F. Downing, E. E. Fairbrother, Ole Scar and John Wenzin, directors. Organized January, 1902, under laws of Wyoming, with capitalization \$1,000,000, shares \$1 par.

Lands, 18 claims, area 360 acres, also 20 acres of placer ground, in the Jelm Mountains, 32 miles southwest of Laramie, nearest railroad point, showing 3 fissure veins, carrying auriferous and argentiferous copper carbonates and sulphides, of good assay values, with a little native copper and galena. Development is by shafts of 70', 70' and 100', on a gold vein, a shaft of 100' on a vein carrying auriferous and argentiferous copper and lead sulphides, and a 250' shaft on an auriferous copper vein, mine also having tunnels of 70' and 250'. Mine is wet, needing pumps. Out of funds and idle several years.

**WYOMA IRON & COPPER CO.**

**WYOMING.**

Office: 928 Equitable Bldg., Denver, Colo. Mine office: Battle, Carbon Co., Wyo. Geo. E. Ross-Lewin, president; H. A. McIntyre, secretary and treasurer. Capitalization \$2,000,000, shares \$1 par. Lands, 16,380 acres, in 4 groups, in Wyoming, carrying iron and copper ores, coal, and indications of oil. Idle several years.

**COMPÀNIA MINERA YABRICOYA.**

**CHILE.**

Office: Iquique, Chile. Mine office: Tarapacá, Tarapacá, Chile. Property is the Aguada mine, carrying argentiferous copper ores, with values mainly in silver. Presumably idle.

**YADKIN MINING & IMPROVEMENT CO.**

**NORTH CAROLINA.**

Office: 508 Herman Bldg., Milwaukee, Wis. Lands, in Yadkin county, North Carolina, include the Tom Dixon mine, carrying gold and copper ores. Idle.

**YADKIN & VIRGINIA COPPER & LAND CO.**

**NOETH CAROLINA.**

Office: care of Egbert B. C. Hambly, Salisbury, N. C. Organized 1903, under laws of North Carolina, with capitalization \$750,000, to develop copper properties. Apparently idle since birth, and moribund.

**YAEGER CAÑON COPPER CO.**

**ARIZONA.**

Office: Union Trust Bldg., Detroit, Mich. Mine office: Jerome, Yavapai Co., Ariz. Robert E. Plumb, president; Richard E. Sloan, vice-president and general manager; Geo. B. Russell, secretary; Geo. H. Russell, treasurer; C. E. Brinker, superintendent. Organized Apr. 11, 1903, under laws of Arizona, with capitalization \$800,000, shares \$1 par.

Lands, 21 claims, area 460 acres, 4 miles southwest of Jerome, in the Black Hills district. Has 3 fissure veins in diorite, one, averaging 14' width, having shafts of 350' and 1,200', with about one-half mile of workings, estimated to show 40,000 tons of ore, and claimed to have 25,000 tons blocked out for stoping, ore being bornite and chalcopyrite, estimated to average 6% copper, 8 oz. silver and \$2 gold per ton. Has a 240-h. p. steam plant, with a 140-h. p. hoist and a 10-drill Sullivan air-compressor. A 60-ton concentrator, 30x104', of wood and iron, has a No. 2 Austin centrifugal crusher, 2 trains of rolls and 5 Wilfley and Bartlett tables. Has been a small producer for several years. Production, 1907, was 145,849 lbs. fine copper. Property considered promising and management good.

**YAKUKI MINE CO.**

**JAPAN.**

Mine office: Fukushima, Japan. Production, 1907, was 390,810 lbs. fine copper, 167,454 momme silver and 8,015 momme gold.

**YALE GOLD-COPPER MINING CO.****BRITISH COLUMBIA.**

Dead. Formerly at Rossland, Trail district, B. C.

**YALE MINING CO.****BRITISH COLUMBIA.**

Mine office: Hedley, Boundary district, B. C. F. A. Boss, manager. Lands, 25 claims, area circa 1,250 acres, of which 2 claims, the Nickel Plate and Sunnyside, are worked. The Nickel Plate, primarily a gold and silver mine, carrying a little copper, has water and electric power, and is closely connected with the Daly Reduction Co., which operates the Nickel Plate mill of 40 stamps. Production, normally, is about 3,000 tons of ore monthly, and for 1907 was 31,756 tons, notwithstanding the loss of 3 months time.

**YAMAGATATOKITO MINE.****JAPAN.**

Mine office: Nanataki-mura, Kazuno-gori, Rikuchu, Japan. Production, 1906, was 641,120 lbs. fine copper.

**YAMATE MINE.****JAPAN.**

Mine office: Takigawa-mura, Kume-gori, Mimasaka, Japan. Is a very ancient mine. Ore is slightly argentiferous chalcopyrite, associated with pyrite, galena and sphalerite, with arenaceous clay gangue, occurring in quartz-diorite. Best grade of ore yields 10 to 13% copper. Latest recorded production, 1899, was 3,044 momme silver and 99,679 lbs. fine copper. Presumably idle.

**YAMPA MINE.****UTAH.**

Owned by Tintic Mining &amp; Development Co.

**YAMPA SMELTING CO.****UTAH.**

Office: 214 Dooly Bldg., Salt Lake City, Utah. Works office: Bingham Canyon, Salt Lake Co., Utah. Henry Stearne, president; Chas. W. Saxman, general manager; J. C. Dick, general superintendent; G. W. Metcalf, smelter superintendent. Organized 1903, with capitalization \$100,000. is controlled, through stock ownership, by Tintic Mining & Development Co.

Property is a smelter, at Yampa, near Bingham Canyon, built 1904, and enlarged, 1906, to 1,000 tons daily capacity. The works connect with the lower end of the aerial tram of the Yampa mine. Structures include ore-bins, calcining building, furnace building, converter department and a power plant, all buildings having steel frames.

The calcining department has eight 125-ton McDougall calciners, each with 6 superimposed hearths having sets of rabbling arms and rakes, with a dust chamber 18x30x60', connecting with a 120' brick stack. Calcining reduces ore from 30% down to 5% in sulphur tenor.

The furnace building has 3 blast-furnaces, and a main stack with extreme elevation of 287' above the tuyeres. There are also 3 reverberatory furnaces, each having separate brick stacks. The converter department, installed 1907 has 2 stands, with 16 shells, converting matte of 50% average tenor to blister copper, shipped for refining to Chrome, N. J.

Production was 4,699,765 lbs. fine copper 1906, and 5,001,255 lbs. in 1907, and late 1908 works were treating circa 900 tons of ore daily, of which about 800 tons was custom ore. The smelter is threatened with damage suits, on account of fumes, though the injury seems mainly imaginary. The works are modern in design and equipment, and management is good.

**YANKEE CONSOLIDATED MINING CO.****UTAH.**

Office: 609 McCornick Bldg., Salt Lake City, Utah. Mine office: Eureka, Juab Co., Utah. John E. DuBois, president; Hon. J. E. Frick, vice-president; B. H. Lehman, treasurer; preceding officers, H. C. Edwards and Chas. J. North, directors; C. J. Canfield, secretary; Louis Merriman, superintendent. Organized July 8, 1898, under laws of Utah, with capitalization \$500,000, increased, circa February, 1908, to \$1,000,000, shares \$1 par. Annual meeting, fourth

**Monday in June.** Paid dividends of \$100,000 to end of 1905, and apparently continued dividends regularly during 1906 and 1907.

Lands, on Godiva Hill, include the Yankee mine and the Mountainview and Lakeview mines, two latter taken over, 1908, from the Mountainview Mining Co. Mines, opened by shaft to depth of 800', carry mainly silver-lead ores, with small values in gold and copper. Production, 1907, was 224 carloads, or circa 8,000 tons of ore.

**YANKEE CONSOLIDATED MINING, MILLING & TUNNELING CO.** **COLORADO.**

Mine office: Yankee, Clear Creek Co., Colo. Henry I. Seeman, manager. Has auriferous and argentiferous lead and copper ores, with a 5-stamp mill. Presumably idle.

**YANKEE DOODLE MINING CO.** **ARIZONA.**

Mine office: Johnson, Cochise Co., Ariz. J. P. Richardson, manager. Has shafts of circa 100' and 200', also a tunnel showing cuprite and azurite, associated with hematite.

**YAQUI CAÑON COPPER CO.** **MEXICO.**

Office: 408 Gumbel Bldg., Kansas City, Mo. Mine office: Suaqui de Batue, Ures, Sonora, Mex. A. J. Davies, president and general manager; S. M. Major, vice-president; Frank B. Foster, secretary and treasurer; W. T. Kerr, secretary; T. W. Foster, superintendent; preceding officers, J. B. Ross and Wm. Herbert Collins, directors. Organized under laws of Arizona, with capitalization \$2,000,000, shares \$1 par. Lands, 60 pertenencias, area 148 acres, known as the Todos Santos mine, and a 50-acre smelter-site. Has 6 contact deposits between limestone and porphyry, of which 2, slightly developed, are of 10' average width, showing ores said to give average assays of 7% copper and 50 oz. silver from the copper veins, and 15% lead and 30 oz. silver, with a trace of gold, from the lead veins. Property is an antigua, supposed to be circa 300 years of age, showing considerable low grade ore on the dumps, from ancient operations. Planned reopening by a tunnel to crosscut all known veins, and also planned building a 10-ton reverberatory furnace. Presumably idle.

**YAQUI COPPER CO.** **MEXICO.**

Office: 170 Broadway, New York, N. Y. Letter returned unclaimed from former operating office, Hermosillo, Sonora, Mex. Mine office: Suaqui de Batue, Ures, Sonora, Mex. Wm. Sauntry, president; John M. Thurston, vice-president and general counsel; Hon. Geo. E. Green, secretary and treasurer; Chas. Kiser, general manager; Ed. Chamberlain, superintendent. Organized 1902, under laws of West Virginia, with capitalization \$5,000,000, shares \$1 par.

Lands originally were, or were claimed to be, 6,032 acres of mineral territory, and 119,284 acres timber and grazing lands, also water rights to 25 miles of the Yaqui river, mining lands being in the vicinity of Suaqui de Batue, Campo Santo Niño, in the Sierra Madre Mountains, circa 120 miles from Hermosillo. Property is claimed to show antigua workings, iron ore and indications of coal. In June, 1906, the Montaña de Cobre company was said to have acquired 1,000 pertenencias formerly held by the Yaqui Copper Co., hence present holdings are uncertain.

Company claims to have contact deposits, between granite and limestone, 80' to 200' wide and several miles in length, with one exposure of a quarter-mile depth on the face of a mountain, with main ore body crossed by a smaller vein, at nearly right angles, all of these claims being preposterous. Company claims upper portions of veins show oxidized ores, succeeded by massive chalcopyrite, bornite and chalcocite, and claimed that average assays of a large number of samples give 14.92% copper, 6.6 oz. silver and 2.09 oz. gold per ton,

which assays are without verification, and probably will continue to lack competent indorsement till the end of time.

Development, begun 1901, is by 2 shafts and 8 tunnels, and, so far as can be learned, the mine has shown practically no ore.

Improvements include an engine and boiler house, office building and store. Company planned the installation of a hydro-electric plant and a concentrator, but failed to secure same.

The Yaqui Copper Co. was organized for the purpose of selling stock, and was a deliberate swindle, and the lying done by its original officers was of a monumental nature. The company claimed possession of the largest copper vein ever located, but was unable to produce the same for the inspection of visitors competent to judge. Mr. Sauntry, the president, who was not connected with the original management, is an experienced lumberman, and an excellent judge of pine timber. The secretary and treasurer is a manufacturer of time-recording machines, and the former superintendent, who was killed by the Yaqui Indians, is said to have managed a photograph gallery with signal success. Apparently an unsuccessful effort was made by the Greene Gold-Silver Co. to secure control of this property. The company is exceptionally hard up, with a considerable floating debt, and is constantly pleading to shareholders for funds, and, March 31, 1908, issued a mimeographed letter to shareholders, offering the company's note for one year, in order to raise \$1,600, to pay back salary due the widow of the late superintendent. So far as can be learned the property is practically valueless, and the company practically bankrupt.

#### **YAQUI RIVER CONSOLIDATED GOLD & COPPER CO.**

**MEXICO.**

Office: Nogales, Ariz. Mine office: Quiriego, Alamos, Sonora, Mex. W. H. Smith, secretary; Walter W. Strickland, manager.

#### **YAQUI RIVER EXPLORATION CO.**

**MEXICO.**

Dead. Formerly at San Antonio de la Huerta, Ures, Sonora, Mex.

#### **YAQUI RIVER GOLD & COPPER CO.**

**MEXICO.**

Office: Los Angeles, Cal. Mine office: Nogales, Magdalena, Sonora, Mex. Roy Stearns, president and general manager. Property is the Mina Verde, near Nogales.

#### **YAQUI SMELTING & REFINING CO.**

**MEXICO.**

Works office: San Antonio de la Huerta, Ures, Sonora, Mex. A. E. Klauser, president; H. R. Klauser, vice-president; H. C. Gerver, secretary and treasurer; Henry Lockhart, Jr., general manager; preceding officers and A. V. Baumann, directors; Samuel James, smelter superintendent.

Lands consist of mining claims in the vicinity of San Antonio de la Huerta, 80 miles east of Torres and 60 miles below Campo Santo Niño, circa 20 miles from the nearest railroad, and a concession has been granted the company for a 40-kilometer aerial tram, to bring ore of various mines to its works.

The reduction plant, of circa 150 tons nominal daily capacity, includes a 2-story sampling mill, one reverberatory furnace and one Allis-Chalmers blast-furnace, latter specially designed to reconcentrate, smelt and refine auriferous ores of both lead and copper. Local coke proving unsatisfactory, imported coke is employed for the blast-furnace, and wood is burned in the reverberatory furnace. The works have electric light.

Buildings include a machine-shop, smithy, laboratory, general store, hotel and an ice-plant. This is the only custom smelter in a rich mineral district, but adequate transportation facilities are lacking, and there has been great difficulty in operating the plant, owing to depredations of the Yaqui Indians.

**YARWELL MOUNTAIN COPPER CO.****COLORADO.**

Mine office: Steamboat Springs, Routt Co., Colo. Organized 1907. Lands, said to have been bought for \$60,000, are on Yarwell Mountain.

**SOCIEDAD YAURICOCHA, LIMITADA.****PERÚ.**

Office and mine: Huarapampa, Yauyos, Lima, Perú. Mine carries argentiferous copper ore. Was a small producer, at last accounts.

**YAVAPAI CONSOLIDATED GOLD-SILVER-COPPER CO.****ARIZONA.**

Mine office: Crown King, Yavapai Co., Ariz. W. C. Bashford, superintendent. Lands, 30 claims, 13 patented, including the Old Reliable mine, 3 miles from Crown King, opened 1875, which produced rich gold ores; the Wild Flower group, in the Pine Grove district, and the Tiger group, in the Bradshaw Mountains. Properties have several thousand feet of old workings, showing a contact vein between porphyry and syenite, carrying slightly auriferous and highly argentiferous copper ores. Has steam power and a 20-stamp mill, and was said, at last accounts, to employ circa 100 men.

**YAVAPAI COPPER CO.****ARIZONA.**

Letter returned unclaimed from former office, 317 Main St., Springfield, Mass. Mine office: Prescott, Yavapai Co., Ariz. Geo. Nightingale, president; Frederick Carpenter, secretary. Organized circa 1900, with capitalization \$1,000,000, shares \$10 par. Lands, 25 claims, area 500 acres, about midway between Prescott and Jerome. Idle some years, deeply involved in debt, and moribund.

**YAVAPAI DEVELOPMENT CO.****ARIZONA.**

Dead. Formerly at Mayer, Yavapai Co., Ariz.

**NEGOCIACION MINERA DE CLEMENTE YBARRA.****MEXICO.**

Mine office: Promontorios, Alamos, Sonora, Mex. Clemente Ybarra, owner; Jesús María Quijada, manager. Lands include the Almada, Terito, Alvarado and Gloria mines, carrying auriferous and argentiferous copper ores, developed by shafts and tunnels.

There are 2 small smelters, known as La Valenciana, which, 1903, produced 9,200 kgs. blister copper, and Almada y Terito, which, 1903, produced 8,000 kgs. blister copper. Property is primarily a silver mine, copper being secured as a by-product. About 50 men are employed.

**YBARRA GOLD MINING CO.****MEXICO.**

Office: 132 Market St., San Francisco, Cal. Mine office: Calmali, Sur, Baja California, Mex. A. J. Mayer, superintendent. Lands include the Buena-ventura, San Francisco and other mines, carrying auriferous and argentiferous copper ores. Has steam power and a 25-ton mill, employing circa 75 men at last accounts.

**YELLOW BUTTE COPPER MINING CO.****CALIFORNIA.**

Office: care of W. P. Veuve, president, San Jose, Cal. Mine office: Edgewood, Siskiyou Co., Cal. J. B. Ball, secretary; L. D. Ball, superintendent. Organized 1907. Mine, 12 miles from Edgewood, on the eastern slope of Haystack Mountain, began ore shipments, early 1908, to Kennett smelter.

**YELTA NEW COPPER MINING CO., N. L.****SOUTH AUSTRALIA.**

Mine office: Wallaroo, Daly Co., South Australia. Presumably idle.

**YENISEI COPPER CO., LTD.****SIBERIA.**

Office: 269 Broad Street Place, London, E. C., Eng. Mine office: Rudnik Julia, Abakansk, Yenisei, Siberia. R. Van Gember, chairman; A. G. Terskoff, Russian agent; Norman J. Wallworth, secretary; Nicholas Henri de Goerke, general manager; Walter J. Stanford, mine superintendent. Organized Apr. 21, 1902, under laws of Great Britain, with capitalization £300,000, shares £1 par; issued, £214,400. Debentures, £5,543 issued. Has an £18,000 note outstanding.

Lands are 11 copper concessions, area circa 11,000 acres, including the Julia mine, also 10 coal concessions, and timber rights covering about 470,000 acres.

Work has been done on 2 copper claims, principal development being on the Julia, which has sundry old workings, with new shafts of 160', 100', 130', 50' and 250', property having been estimated, June, 1906, to have ore reserves of 70,000 long tons, of 5.5% average copper tenor, which was an overestimate, both as to reserves and tenor. Ore is now reported by company to average 3.4% copper, with about 4% sulphur, 30% silica, 10% magnesia, 17% iron oxide and 34% calcium oxide. Ore is highly silicious and difficult of reduction, and, under test of actual smelting, returned only 3.08% copper.

The 100-ton smelter, one-fourth mile from the mine, blown in 1907, has a 36x120" Fraser & Chalmers water-jacket blast-furnace, rated at 100 tons, but which, in actual practice, treats only 60 to 75 tons daily, burning charcoal, which is scarce, and making matte averaging 40% copper tenor, which is broken in rolls and roasted with 3% fuel charges, in shaft-ovens, and brought up to metal of 88% copper tenor, which is shipped to Swansea for refining, product being copper of 99.75% copper tenor. Production was 563,319 lbs. fine copper in 1907, and circa 1,820,000 lbs. in 1908. The company has experienced serious labor troubles, and apparently suffers also from lack of adequate cash.

#### **YERINGTON ASSOCIATED COPPER CO.**

**NEVADA.**

Dead. Was organized 1907, under laws of Arizona, with capitalization \$1,500,000. Formerly at Yerington, Lyon Co., Nev.

#### **YERINGTON-B. C. MINING CO.**

**NEVADA.**

Letter returned unclaimed from former mine office, Wabuska, Lyon Co., Nev. H. Hamlin, superintendent. Organized circa April, 1908. Lands, 8 claims, south of the Wabuska-Yerington, supposedly carrying southern extensions of ore veins of latter. Lands are said to show a 3' gold vein, and a prominent gossan carrying up to 20% copper, presumably from selected specimens. Company planned development by shaft. Idle.

#### **YERINGTON CENTRAL COPPER CO.**

**NEVADA.**

Office: Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. J. J. Beatty, manager. Mine has a 250' three-compartment shaft, showing a 3' to 5' vein of chalcopyrite, claimed to assay about 10% copper, with a 4" hanging-wall paystreak of melaconite assaying up to 59.1% copper.

#### **YERINGTON CONSOLIDATED COPPER CO.**

**NEVADA.**

Office: Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. Frank J. Hagenbarth, president; Windsor V. Rice, vice-president; Walter C. Orem, treasurer and general manager; J. H. Turner, secretary; preceding officers, Col. Enos A. Wall, John Dern and Wm. Keiting, directors; S. S. Arentz, superintendent. Organized circa February, 1907, with capitalization \$5,000,000, shares \$5 par. Lands, circa 225 acres, in 2 groups, known as the Copper King and Copper Deposit, said to lie between the Bluestone and Mason Valley mines, and to show auriferous copper sulphide ore of good tenor.

#### **YERINGTON COPPER CO.**

**NEVADA.**

Office: Hooper Bldg., Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. Chas. N. Strevell, president; J. H. Pennington, vice-president; C. D. Rookridge, secretary; H. P. Clark, treasurer; D. E. McPherson, resident director; A. A. Mursal, superintendent. Organized circa July, 1906, under laws of Utah, with capitalization \$1,000,000, shares \$1 par.

Lands, 14 claims, circa 3 miles east of Yerington, showing a prominent gossan, traceable one-half mile, covering a contact deposit between porphyry and limestone, carrying carbonate ore assaying 15 to 20% in copper tenor, from surface to a depth of 125', when sulphide ore appears. Has a 25' shaft

in ore, and a 400' tunnel, said to show, on the 325' level, sulphide ore of 6 to 10% copper tenor. Has gasoline power, and a gasoline pump working against a 300' head.

**YERINGTON COPPER KING CO.****NEVADA.**

Office: Salt Lake City, Utah. Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. Lands, known as the Craig group, north of the Bluestone, are said to have shipped a little high grade ore, under former ownership. Idle.

**YERINGTON IRONSIDES COPPER CO.****NEVADA.**

Office: Salt Lake City, Utah. Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. A. Hanauer, Jr., president; Wm. H. Tibbals, vice-president; J. P. Spaulding, treasurer; J. H. Turner, secretary; preceding officers, Ralph Bettinger and Chas. T. Rookridge, directors; T. L. Walden, superintendent. Capitalization \$1,000,000, shares \$1 par. Lands, circa 140 acres, north of the Nevada-Douglas and northwest of Yerington, having numerous pits and cuts, with one shaft and a tunnel on the Ironsides claim, showing a vein said to carry ore averaging 5 to 8% copper. Idle.

**YERINGTON KNOB HILL SYNDICATE.****NEVADA.**

Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. Apparently only assessment work was done. Idle and apparently moribund.

**YERINGTON MALACHITE MINING CO.****NEVADA.**

Office: 214 Atlas Blk., Salt Lake City, Utah. Mine office: Yerington, Lyon Co., Nev. Willard F. Snyder, president; Henry J. Meyer, vice-president; C. O. Ellingwood, treasurer; Grant Snyder, general manager; O. H. Sonne, mine superintendent. Organized under laws of Nevada, with capitalization \$5,000,000, shares \$5 par.

Lands, adjoining the Mason Valley mine, show a mineralized zone of 50' to 200' width, between limestone and diorite, carrying some oxidized ores, but mainly chalcopyrite, estimated to average 6% in copper tenor. Development is by 3 tunnels and a 3-compartment shaft.

Equipment includes an electric hoist, good for 600' depth, an Imperial air-compressor and 7 air-drills. Company plans continuous development and deepening shaft to 600'.

**YERINGTON MOHAWK COPPER ASSOCIATION.****NEVADA.**

Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. Organized circa April, 1907, under laws of Arizona, with capitalization \$1,000,000. Idle.

**YERINGTON NIPPER COPPER CO.****NEVADA.**

Office: 418 Atlas Blk., Salt Lake City, Utah. Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. Stephen H. Love, president; Hon. Wm. B. Jeffs, vice-president and superintendent; David Kennedy, secretary and treasurer; preceding officers, John O. Lynch, Lewis A. Jeffs, F. A. Flindt, Walter L. Maas and Jay T. Harris, directors. Organized circa April, 1907. Lands are in Mason Pass, between the Ludwig and Yerington-Ironsides. Idle.

**YERINGTON QUEEN COPPER CO.****NEVADA.**

Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. Lands, 6 claims, area circa 120 acres, said to show ore assaying 7 to 40% copper. Idle and apparently moribund.

**YERINGTON RED METAL MINING CO.****NEVADA.**

Office: 1 Masonic Temple, Reno, Nev. Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. O. A. Dockman, president; J. H. Baker, vice-president; J. F. Haley, secretary; E. F. Adams, treasurer and man-

ager. Organized circa December, 1906, under laws of Arizona, with capitalization \$1,500,000. Lands, 10 claims, circa 6 miles east of Yerington, said to show a mineralized zone of about 300' width, traceable about 2,000', carrying ore of 5 to 33% copper tenor.

**YERINGTON UNITED COPPER CO.**

**NEVADA.**

Letter returned unclaimed from former mine office, Yerington, Lyon Co., Nev. Organized 1907, under laws of Arizona, with capitalization \$1,000,000. Idle and apparently moribund.

**YERINGTON-UTAH MINING CO.**

**NEVADA.**

Mine office: Yerington, Lyon Co., Nev. Lands, 15 claims, a millsite and a water right, circa 7 miles west of the Nevada-Douglas, said to show carbonate and sulphide ore assaying 2 to 35% copper and up to \$126 gold per ton.

**YORK HARBOUR COPPER CO., LTD.**

**NEWFOUNDLAND.**

Dead. Wound up, February, 1902. Formerly at York Harbour, Nfld.

**YORK HARBOUR MINE.**

**NEWFOUNDLAND.**

Mine office: York Harbour, Bircy Cove, Bay of Islands, Newfoundland. Lands, 4 claims, area 6,400 acres, also 26,880 acres of timber lands, giving total holdings of 33,280 acres, on the west coast of Newfoundland. Country rocks are diorite, with 12 known fissure veins in serpentine, of which 5, including one of 50' width, have been more or less developed, these showing cupriferous iron pyrites, claimed to carry 3 to 18% copper, occasional zinc, up to 50% sulphur, 0.5 to 4 oz. silver and 40 cents to \$1.40 gold per ton. Development is by shafts of 54', 64', 70' and 400', with circa 2,000' of underground workings. Mine was discovered circa 1870, but active development was not begun until 1900. Equipment includes a 250-h. p. steam plant, with 5 hoists, an 8-drill Norwalk air-compressor, engine-house, boiler-house, sawmill and 15 dwellings. Mine has a crusher, of 300 tons daily capacity, and a substantial wharf, on a good harbor, connected with the mine by a 5,000' ground-tram, and is 14 miles distant from the Newfoundland railway. Was last held by Humber Consolidated Mining & Manufacturing Co. Idle.

**YOSEMITE COPPER MINING & REDUCTION CO.**

**CALIFORNIA.**

Dead. Formerly at Daulton, Madera Co., Cal. Described Vol. VII.

**YOSHIOKA MINE.**

**JAPAN.**

Owned by Mitsui Bishi Goshi-Kwaisha.

**YOUNG AUSTRALIAN MINE.**

**AUSTRALIA.**

Mine office: Wrightville, Robinson Co., N. S. W., Australia. Property, in the Cobar district, was under development in 1908, and was a small producer.

**YREKA COPPER CO.**

**BRITISH COLUMBIA.**

Dead. Formerly at Yreka, Vancouver Island, B. C. Very fully described Vol. VII.

**YTTERÖEN MINE.**

**NORWAY.**

Mine office: Ytterö, Trondhjem, Norway. Property, which is not far from the Meraker field, is a very small producer of cupriferous pyrite. Latest recorded production, 1903, was 1,300 tons of ore.

**YUKON PUEBLO MINES CO.**

**YUKON.**

Office: Spokane, Wash. Mine office: White Horse, Yukon, Canada. Byron N. White, president and general manager. Organized under laws of Washington, with capitalization \$500,000. Lands, 9 claims, area 450 acres, circa 4 miles west of White Horse, including the Pueblo, Carlisle and adjoining properties. The Carlisle mine has a 140' shaft, and 100 tons of ore shipped therefrom gave smelter returns of 22.64% copper and 6 oz. silver per ton. The Pueblo mine is said to show a body of ore about 250' square, opened to depth of 100', ore being mainly hematite carrying oxidized copper ores, principally malachite, averaging about 4% copper, with small gold values. The deposits

carry occasional streaks of rich ore, including native copper, cuprite, azurite, chalcocite, bornite and chalcopyrite. All ores carry a little silver, and occasional gold. Management planned stripping the overburden and working the mine open-cast, which would seem a proper system. Property has been handicapped by lack of railway transportation, now available, but shipped, 1907, to Crofton smelter, 700 tons of roughly selected ore, returning 5.65% copper and 2 oz. silver per ton. Production, 1907, estimated at 100,000 lbs. fine copper. Is a property of considerable promise, with a good management.

**YUSENJI MINE.****JAPAN.**

Mine office: Satokawa-mura, Nomi-gori, Kaga, Japan. Production was 921,491 lbs. fine copper in 1906 and 940,926 lbs. in 1907.

**YUSPENSKI MINE.****SIBERIA.**

Owned by Spassky Copper Mine, Ltd.

**ZACATECAS & DURANGO MINING & SMELTING CO.****MEXICO.**

Dead. Formerly at Chalchihuantes, Sombrerete, Zacatecas, Mex. Described Vol. VII.

**COMPANHIA DA ZAMBEZIA.****PORTUGUESE EAST AFRICA.**

Offices: 53 Rua do Alecrim, 1°, Lisbon, Portugal, and 10 Rue Lafayette, Paris, France. D. De Brito Capello, chairman. Organized May 20, 1892, under Portuguese royal decree, with capitalization 2,700 contos do reis, shares 4,500 reis (\$1) par; issued, 2,025 contos do reis. Property is a concession of 60,000 square miles, on either side of the Zambezi and Shire rivers, extending east of latter to the coast, and embracing the ports of Quelimane and Chinde, Portuguese East Africa. Concession includes copper-bearing fields of prospective value, and company plans organizing a subsidiary corporation to take over copper prospects at Macomba, Marabé, Boroma and elsewhere in its territories.

**ZAMBONA DEVELOPMENT CO.****MEXICO.**

Office: 404 Trust Bldg., Los Angeles, Cal. Mine office: Minas Nuevas, Alamos, Sonora, Mex. W. S. Cranz, president; W. L. Patterson, treasurer; Wm. Shuckman, vice-president; S. L. Bosford, secretary; Amos J. Yaeger, general manager; preceding officers and R. R. Coleman, directors. Property is the Purisima mine, carrying native silver, silver sulphides and argentiferous chalcocite, ore values being mainly in silver. Has steam and electric power, and a 20-stamp mill having 4 Huntington mills and a 100-ton cyanide plant, latter planned to be doubled in capacity. Employs circa 450 men.

**SOCIEDAD FUNDICIÓN DE ZAPALLO DE QUILE.****CHILE.**

Office: Ovalle, Coquimbo, Chile. Works office: El Zapallo de Quile, Ovalle, Coquimbo, Chile. Organized July 12, 1904, under laws of Chile, with capitalization 53,000 pesos, shares 100 pesos par.

**FAHLEBZ- UND KUPFERKIESBERGBAU ZAPFENSCHUH.****AUSTRIA.**

Mine office: Altzeh Zapfenschuh, Tyrol, Austria. Is an old but small mine, having sulphide copper ores.

**ZAPOPÁN GOLD MINING CO.****MEXICO.**

Mine office: La Yesca, Ahuacatlán, Tepic, Mex. G. H. Buttolph, manager. Property includes the Zapopán and San Miguel mines, carrying auriferous zinc, lead and copper sulphides, values being mainly in gold. Has steam power, with a Bryan mill and 30-ton cyanide plant, employing circa 100 men, at last accounts.

**COMPAÑÍA MINERA ZAPOTECA.****MEXICO.**

Office: Laclede Bldg., St. Louis, Mo. Mine office: Ocotlán, Oaxaca, Mex. Geo. T. Riddle, president; P. R. Flitcraft, secretary; Guillermo W. Thompson, general superintendent; F. J. Tayman, assistant superintendent. Organized January, 1903, under laws of West Virginia, with capitalization \$1,000,000, shares \$1 par.

Lands, 33 pertenencias, area 81 acres, also 420 acres miscellaneous lands, in the Taviche district, including the Zapote mine, carrying auriferous copper and argentiferous lead ores, developed by a 400' main shaft and 300' tunnel. Has steam power and a 30-h. p. Webster, Camp & Lane double-drum hoist, good for 1,000' depth. Nearest railroad is the Ferrocarril Oaxaca y Ejutla, 8 miles distant. Employed circa 100 men, at last accounts.

**ZARAGOZA COPPER & ZINC MINES, LTD.****SPAIN.**

Dead. Formerly in Huelva, Spain. Described Vol. VI.

**COMPAÑIA MINERA ZAUCUDO.****COLOMBIA.**

Mine office: Medellin, Antioquia, Colombia. Juan de la Posado, superintendent. Operates the Zaucudo and Savalotas mines, producing gold, silver and copper, latter in small quantities, as a by-product. Has steam power and a small smelter.

**GEWERKSCHAFT DER ZECKE THALBURG.****GERMANY.**

Dead. Formerly at Heiligenhaus, Rheinprovinz, Germany. Described Vol. VI.

**ZELAYA HERMANOS.****CHILE.**

Office and works: Paipote, Copiapó, Atacama, Chile. Works have a cylindrical water-jacket blast-furnace.

**ZELLER ERZBERGWERKE G. m. b. H.****GERMANY.**

Mine office: Altlay bei Zell a/M., Rheinprovinz, Germany. R. Reiser, president. Produces argentiferous lead and copper ores, latter in small quantities only, employing circa 100 men.

**ZENITH GOLD & COPPER MINING CO.****WYOMING.**

Dead. Formerly at Encampment, Carbon Co., Wyo.

**ZENOLI SILVER-COPPER CO.****NEVADA.**

Office: Salt Lake City, Utah. Mine office: Palisade, Eureka Co., Nev. E. O. Howard, president; P. C. Delmas, vice-president; W. M. Wantland, secretary and treasurer; preceding officers, Jos. Lippman and J. A. McAllister, directors; P. D. Delmas, superintendent. Organized December, 1906, with capitalization \$150,000, shares \$1 par. Lands, 5 claims, opened by tunnel, showing a vein of 2' to 6' width carrying silver-lead ore at surface, changing to argentiferous copper ore at depth. Has secured ore assaying up to 204 oz. silver per ton, and shipped a little ore, 1907.

**ZIMAPÁN MINING & SMOELTING CO.****MEXICO.**

Dead. Formerly at Zimapán, Hidalgo, Mex. Described Vol. VI.

**ZOMEKI MINE.****JAPAN.**

Mine office: Ikuno-mura, Abu-gori, Nagato, Japan. Ores are slightly argentiferous chalcopyrite and bornite, associated with sphalerite, galena and pyrrhotite, occurring in lenses and fissure veins, near liparite dikes penetrating clay-slate, sandstone and limestone. Presumably idle.

**COMPAÑIA MINERA DE ZOMELAHUACÁN.****MEXICO.**

Mine office: Las Minas, Jalacingo, Vera Cruz, Mex. W. Vogel, manager. Property is La Ascencion de Maria y anexas, carrying auriferous and argentiferous copper and lead ores. Has water power and a 15-stamp mill, employing circa 150 men.

**ZONIA COPPER MINING CO.****ARIZONA.**

Dead. Formerly at Kirtland, Yavapai Co., Ariz.

**ZUMA MINING & MILLING CO.****UTAH.**

Office and mine: Eureka, Juab Co., Utah. Michael L. Garity, president; Rasmus Nelson, vice-president; P. J. Fennell, secretary; J. E. Driscoll, treasurer. Organized 1907, with capitalization \$500,000, shares 50 cents par.

## CHAPTER XXV.

### GENERAL COPPER STATISTICS.

This, the final chapter of the work, devoted to the statistics of the copper industry, contains a larger number of tables than in the earlier editions, and gives two or three times as much matter per page, it having been found possible to consolidate two and even three of the tables of the earlier editions into a single form. It will be found, in many cases, that a single table gives figures covering a half-dozen or more different but cognate points.

The exact order of precedence in which these tables are published is varied a trifle, from year to year, as required by mechanical exigencies. The task of "making-up" for the press upwards of forty different tables of statistics, each in somewhat different form from any other, and of greatly varying lengths, so as to appear in logical sequence, yet give full pages without awkward breaks or bad spacing, is one that can be appreciated only by an experienced printer, and the unusual degree of success that has been secured in the typographical handling of such extremely awkward matter also is to be fully appreciated only by those who have wrestled with similar problems. There is, however, a grouping of the statistics contained in this chapter, under nine sub-heads, which are given, in each edition, in the following invariable order, though there may be occasional transpositions of individual tables contained in a subdivision:

**WORLD'S PRODUCTION:** Eight tables covering a variety of features.

**AMERICAN PRODUCTION:** Two tables.

**LAKE SUPERIOR PRODUCTION:** Two tables.

**AMERICAN IMPORTS:** One table.

**AMERICAN EXPORTS:** Two tables.

**WORLD'S COPPER TRADE:** Eleven tables covering imports, exports, supplies and consumption, for the world and for all leading consuming countries.

**PRICES AND VALUES:** Six tables.

**COPPER SHARE FINANCES:** Eight tables, devoted to dividends, assessments, capitalization and sales of shares of American copper mining companies.

**TWENTIETH CENTURY PRODUCTION:** One table, giving comparative figures by arithmetical progression, based upon the figures of production and consumption of the preceding century.

All tables are fully entered, both by titles and by numerous cross-references, in the index at the end of the volume.

## WORLD'S COPPER PRODUCTION.

(Long Tons.)

Year.	United States.	Foreign.	Total.	Percentage of U. S. Production.
1880.....	27,000	126,959	153,959	17
1881.....	32,000	131,000	163,000	19
1882.....	40,467	141,155	181,622	22
1883.....	51,574	147,832	199,406	24
1884.....	64,708	155,141	220,249	29
1885.....	74,052	151,540	225,592	32
1886.....	70,430	146,656	217,086	32
1887.....	81,017	142,781	223,798	36
1888.....	101,054	156,972	258,026	39
1889.....	101,239	159,966	261,205	38
1890.....	115,966	153,489	269,455	43
1891.....	126,839	152,552	279,391	45

## ESTIMATE OF WORLD'S PRODUCTION FOR 1908.

This table, similar to estimates given in five preceding annual issues is merely an estimate, based upon the best data at command, of the probable output of copper by the world for the year 1908, compared with actual production of the two preceding years. As final figures are not obtainable until the latter half of each year, for the year preceding, the difficulties in the way of making a fairly accurate estimate of output for the current year, at the close of the year, are considerable, and in the case of the present estimate, the unprecedented condition of the metal market during 1907 and 1908, coupled with drastic restriction of output by many of the largest North American producers, introduces an element of doubt on every hand, rendering the work one of unusual delicacy. In view of these facts there may be a greater percentage of error than in previous estimates, which, when compared with final corrected figures, nearly a year later, proved to be 2.3% too high for 1902; 0.7% too low for 1903; 2.1% too low for 1904; 3.7% too high for 1905, and 3.1% too low for 1907.

Country.	1906	1907	1908

## PRODUCTION OF WORLD'S LEADING MINES.

In this table are given the latest products available of all the really important copper mines of the world, also the outputs of practically all the other copper mines of the world making one million pounds or more yearly, and the products of a great majority of the small mines making as much as 100,000 lbs. fine copper yearly. Products given in round numbers are estimates, based upon the best information obtainable, but in the great majority of cases the figures given are exact returns.

(*Pounds Avordupois.*)

## PRODUCTION, VALUE AND DIVIDENDS OF LAKE COPPER. (Continued.)

Year.	Gross product fine copper (Pounds).	Gross value of production (Dollars).	Total dividends paid (Dollars).	Percentage of dividends to gross values.	Dividends per pound of copper (Cents).
1898	147,965,738	17,829,871	6,857,250	38.4	4.63
1899	146,950,338	26,098,382	12,318,450	47.2	8.39
1900	142,151,571	23,691,928	9,811,200	41.3	6.90
1901	155,716,848	26,038,857	7,496,900	28.8	4.81
1902	170,325,598	20,711,592	3,440,000	16.6	2.02
1903	192,209,191	26,383,449	4,980,000	18.8	2.59
1904	208,355,935	27,107,107	5,432,300	20.0	2.64
1905	230,437,992	36,616,586	9,224,600	25.2	4.02
1906	229,632,608	43,044,732	13,911,500	30.9	6.07
1907	216,116,747	43,319,940	13,469,950	31.1	6.23
Totals.	4,446,424,783	\$636,281,495	\$164,704,270	25.9	3.70

The average price received for all Lake Superior copper, from 1845 to 1907, inclusive, was 13.86 cents per pound, with average dividends of 3.7 cents per pound, leaving an estimated cost of 10.16 cents for all years. While this may be accepted as an arbitrary figure, the cost might be figured much higher, or materially higher. By adding \$60,000,000 to the cost of production, for money lost in unproductive ventures, the cost of copper produced would be made almost exactly 11.5 cents per pound. By adding another \$15,000,000 for assessments on mines that have since repaid in dividends the original assessments, cost of copper would be increased to about 11.85 cents per pound, leaving a net margin of profit, for the entire production, of almost exactly 2 cents per pound, plus the present aggregate values of the mines, which would be about equal to total dividend disbursements to date, or about 3.7 cents per pound.

Omitting the production of mines that have not proven profitable, the average cost of copper produced by dividend-paying mines has been probably about 9.5 cents per pound, for all years.

## AMERICAN COPPER IMPORTS.

The following table, showing imports of copper, in various forms, into the United States, is summarized from the official figures of the United States government. The government statisticians have seen fit to vary the methods employed in presenting these figures, from time to time, but the present plan of giving contents in fine copper of imported ore and matte is preferable to the old plan of giving actual weight of imported ore and matte:

(Pounds Avoirdupois.)

Year.	Copper Contents. Ore & Matte.	Raw Copper.	Old Copper.	Total Fine Copper.
1890	3,448,237	5,189	284,789	3,960,053
1891	8,931,554	2,556	134,407	11,472,436

**AMERICAN COPPER TRADE.**  
1897-1907.

This table, compiled from the figures of the Metallegesellschaft und Metallurgische Gesellschaft A.-G., of Frankfort-on-Main, gives all figures in round hundreds of tons:

(Metric Tons.)

Year.	Production.	Imports.	Total Supply.	Gross Exports.	Net Supply.	Consumption
1897.....	224,100	12,200	236,300	130,900	105,400	117,400
1898.....	238,900	34,700	273,600	145,600	128,000	120,500
1899.....	258,000	46,500	304,500	114,600	189,900	169,000
1900.....	275,000	47,300	322,300	157,900	164,400	168,400
1901.....	273,000	80,100	353,100	100,800	252,300	189,800
1902.....	299,200	73,400	372,600	171,200	201,400	213,400
1903.....	316,600	75,900	392,500	145,400	247,100	236,100
1904.....	368,600	82,200	450,800	257,400	193,400	211,400
1905.....	395,300	95,700	491,000	250,300	240,700	276,300
1906.....	415,000	102,500	517,500	215,000	302,500	300,000
1907.....	405,900	115,000	520,000	243,300	276,700	232,600

**BRITISH AND FRENCH STOCKS OF COPPER.**

This table, based on the compilations of Messrs. Henry R. Merton & Co., Ltd., of London, gives estimates of the stocks of refined copper on hand in Great Britain and France on the first day of each year named. The "visible supply" given in the last column includes also shipments afloat from Chile and Australia to European ports:

(Long Tons.)

Year.	Public Stocks.	Increase.	Decrease.	Visible Supply.
1888.....	35,001	.....	.....	.....
1889.....	96,198	61,197	.....	104,105
1890.....	94,942	.....	1,256	98,847

## AVERAGE AMERICAN AND ENGLISH PRICES.

The following table of average annual prices of copper in England and the United States is based upon the New York price for Lake copper and the London price for Standard copper. The two last columns give the American prices in cents and fractions and the English equivalent in sterling. English prices are for long tons of 2,240 pounds, and American prices for pounds avoirdupois, the last column, giving English equivalent of the American prices, being figured in long tons.

Year.	English Prices.						American Prices.						
	Lowest.			Highest.			Fluctuation.			Average.			
	£	s.	d.	£	s.	d.	£	s.	d.	Cents.	£	s.	d.

## CONVERSION TABLE FOR AMERICAN AND ENGLISH PRICES.

This table gives the equivalents, in American and English currency, for the prices of copper, from £35 to £150 per ton. The American basis of weight is the avoirdupois pound; the English basis is the long ton of 2,240 pounds avoirdupois. The rate of exchange is figured at £1=\$4.85:

(Pounds Sterling and Cents.)			
£35....	7.58c.	£64....	13.86c
£36....	7.80c.	£65....	14.07c.
£37....	8.01c.	£66....	14.29c.
£38....	8.23c.	£67....	14.51c.
£39....	8.45c.	£68....	14.72c.
£40....	8.66c.	£69....	14.94c.
£41....	8.88c.	£70....	15.16c.
£42....	9.10c.	£71....	15.37c..
£43....	9.31c.	£72....	15.59c.

## TWENTIETH CENTURY COPPER PRODUCTION.

1901-2000.

Under this title an effort is made to forecast the future production of copper in the light of the figures of output of the past. Defective in details as such an estimate necessarily must prove, when compared with actual figures of output, the principle is by no means fallacious.

The following table gives the copper production of the Twentieth Century, by decades, with the percentages of increase of each decade compared with the first deccenium, and with the preceding decade:

Decade.	Total Production.	Yearly Av'ge Production.	Percentage Increase	
			of First decade.	Preceding decade.
1801-1810	91,000	9,100	.....	.....
1811-1820	96,000	9,600	5.50	5.50
1821-1830	136,000	13,600	48.35	40.62
1831-1840	218,400	21,840	140.00	61.77
1841-1850	291,000	29,100	219.77	33.24
1851-1860	506,999	50,699	457.13	74.22
1861-1870	900,000	90,000	889.01	77.51
1871-1880	1,189,000	118,900	1,208.59	32.11
1881-1890	2,373,398	237,339	2,508.12	99.44
1891-1900	3,708,901	370,890	8,975.71	56.22

Analysis of these figures shows that the average decennial percentage of increase for the century was 53.91%; for the last half of the century, 67.90%, and for the last twenty years, during which the electrical industry became a great consumer of copper, the average decennial increase in copper output was 77.83%. Measured by decades the increase in copper production during the Nineteenth Century was forty-fold; from the first deccenium to the last, while measured by years, and estimating the production of 1801 at 9,000 tons, the production of 1900, which amounted to 488,363 tons, was just fifty-fold as great as one hundred years earlier. A fifty-fold increase in production during the present century would give an output of 24,318,150 tons of copper for the year 2000.

The actual annual percentage of increase for the Nineteenth Century was a very small fraction more than 4%, measuring outputs by decades, and a fraction over 4%, measuring annual products from 1801 to 1900, inclusive. In order to show the actual increase in production by decades, as compared with the theoretical increase at 4% yearly, the appended table is given, 4% being figured as equal to 50% increase in 10 years, though actually but 48.02%:

## TWENTIETH CENTURY COPPER PRODUCTION. (Continued.)

1901-2000

## Long Tons.

Years.	Yearly Averages		Actual	Gain	Loss	Percentage Theoretical Production
	Theoretical	Actual				
1801-1810 . . . . .	9,000	9,100	100	....	....	101.11
1811-1820 . . . . .	13,500	9,600	....	3,900	....	71.11
1821-1830 . . . . .	19,750	13,500	....	6,250	....	68.35
1831-1840 . . . . .	29,625	21,840	....	7,785	....	73.72
1841-1850 . . . . .	44,437	29,100	....	15,337	....	65.48
1851-1860 . . . . .	66,656	50,699	....	15,957	....	76.05
1861-1870 . . . . .	99,984	90,000	....	9,984	....	90.00
1871-1880 . . . . .	149,992	118,900	....	31,092	....	78.66
1881-1890 . . . . .	224,964	237,339	12,375	....	....	105.99
1891-1900 . . . . .	337,447	370,890	33,443	....	....	109.99

The foregoing table shows very plainly the effect of electrical demand for the metal, which first became a factor of importance in the ninth decade, shortly after 1880. Previous to that decade the theoretical increase of 4% annually, compounded, exceeds the actual increase in every decade, but after 1880 the actual increase exceeds the theoretical ratio. The actual copper output of 1900 was 486,732 tons, and the theoretical output for that year, based on the average of the decade 1890-1900, with 21 3/4% increase for 5 years from the mean of 1895, would have been 410,560 tons. It is evident that the average ratio of increase of slightly more than 4% yearly, which ruled during the Nineteenth Century, is not the factor of the present electrical age. What that factor may be is uncertain. The electrification of the globe, while wonderful progress has been made, is not yet a sufficiently established fact to give accurate data for an average ratio of increase in consumption. The theoretical increase of 8% yearly, compounded, based upon the actual output of 486,732 long tons in 1900, would give a theoretical production of 811,404 long tons in 1907, whereas the output actually was only 713,155 long tons—or very materially less than the theoretical production on the basis of 8% compounded yearly, though the 8% increase was very fairly maintained during the first lustrum of the Twentieth Century.

In this connection it may be remarked that the highly valuable statistical compilations of the late M. Georges de la Bouglise, never published, but which M. de la Bouglise gave the author of this work the opportunity of inspecting, show, from 1840 to 1900, inclusive, an average annual increase, compounded yearly, of about 6.5% for all the leading commercial metals, including iron, copper, lead, tin and zinc, with a nearly similar percentage of increase in the output of coal, so necessary a concomitant of the metals. Following 1880, owing to the electrical demand, now consuming nearly one-half the world's production, copper made rapid gains over all the other commercial metals, except nickel and aluminum, metals so comparatively new in extensive commercial use that the percentages of gain are too abnormal to be used as a basis for forecasting future consumption.

**TWENTIETH CENTURY COPPER PRODUCTION. (Continued.)**  
**1901-2000**

The ratio of increase in copper production of the world has been 6 to 8% for several years past. It has grown to be considered an axiom in the copper trade that the normal increase is 8% yearly, but this ratio, while it may be considered the present factor, has not been established for a sufficiently long time to be assured for an indefinite period in the future. The following table gives hypothetical outputs for every tenth year during the Twentieth Century, based upon various percentages of increase, all figured from the actual production of the closing year of the Nineteenth Century. The compound increases, for facility in computation, are taken at slight changes from their actual value, as, for instance, 4% compounded for ten years is figured as 50% increase, instead of 48.02%, the actual figure; 5% is figured at 60%, instead of 62.89%; 7% compounded is figured as 80% in ten years, instead of 79.02%; 8% is figured as only 110% instead of 115.89%.

# HOISTING ENGINES

Are Standard for Mines

LIDGERWOOD DOUBLE GEARED MINING HOIST

The engraving illustrates our 18 x 24 size of Double Geared Mining Hoist. This engine is equipped with our regular form of post brake, which is operated by one of the hand levers shown in the rack, having a thumb latch and quadrant, and is so compounded that it will safely hold any load the engine is capable of hoisting. The drum gears are ten feet in diameter, and the drum nine feet in diameter and five feet face. *Five of these engines are in successful operation at the mines of the Calumet and Hecla Mining Company,* hoisting from a depth of four thousand feet, compressed air being used instead of steam.

**More than 32,000 Lidgerwood  
Hoisting Engines Now In Use**

# BOSTON COMMERCIAL

LARGEST CIRCULATION OF ANY FINANCIAL NEWSPAPER IN THE UNITED STATES

CIRCULATION INTERNATIONAL AND WORLD WIDE

The BOSTON COMMERCIAL is a recognized authority on

**Coppers, Railroads and Industrials  
Bonds and Investments, New York and Boston Stock Markets  
Street Railways, Electric and Water Power Companies  
Commercial Markets, The Business Situation**

**COPPERS** More accurate, reliable and profitable information concerning COPPERS, the active stocks, the mines and the metal market is to be found in the BOSTON COMMERCIAL than in all other publications combined. It always contains

## WALKER'S COPPER LETTER

in full.

The BOSTON COMMERCIAL is edited by GEORGE L. WALKER, who makes frequent personal visits to the mines and writes with full knowledge of his subject. He is a recognized authority on coppers. The BOSTON COMMERCIAL also has its own correspondents in the various copper mining districts.

**BONDS and INVESTMENTS** The BOSTON COMMERCIAL has made an international reputation as a financial newspaper. It contains each week the most valuable BOND and INVESTMENT department published in this country. The BOND article presents a review of general conditions affecting the market, the monetary situation and its relation to bond prices, a comprehensive analysis of such bond issues as will be of general interest, the general news of the week relating to new issues, reorganizations, etc., with comments.

MUNICIPAL BOND SALES and PROPOSALS are recorded and statistics furnished pertaining to the finances of the municipality issuing.

**STREET RAILWAYS and ELECTRIC COMPANIES** The BOSTON COMMERCIAL contains each week authoritative, extensive and comprehensive articles on street railways, electric and water-power companies and their securities, and news of proposed enterprises in these lines.

**STOCK and COMMERCIAL MARKETS** The BOSTON COMMERCIAL also contains news of the New York and Boston Stock markets, the business situation and the commercial markets—Wool, Cotton, Iron and Steel, Hides and Leather, etc., which are prepared by experts in each line.

HOUGHTON : MICHIGAN

## LET US SOLVE YOUR WASTE HEAT PROBLEM

If your works discharge hot gases to the atmosphere, we can probably save you a lot of money.

Where flue gases from boilers are above 4750 Fahrenheit Green Fuel Economizers show a profit. In mining and smelting processes waste gases are often much higher, and an Economizer would save much more. As examples, we have put in Economizers in the following processes:

To recover waste heat from OIL STILLTS.

To cool the gases from REDUCTION FURNACES and recover gold, silver and copper, and incidentally, heat for the boiler-feed water.

To recover heat from BLAST-FURNACES gases.

To recover heat from the gases leaving ROTARY CEMENT KILNS, etc.

The Economizer can also be used to recover heat from the exhaust of large GAS ENGINES.

In some plants the Green Air Heater is used instead of the Economizer. The air heater recovers heat from hot gases and will heat air to a temperature of 7000 Fahrenheit, or higher. By using it as a regenerator, that is by returning the heated air to the furnace, not only is the consumption of fuel reduced, but a higher furnace temperature is realized.

For a full account of Economizer practice, send for our Treatise, "106 C. H." Consult us before your designs have progressed too far for revision. We also build fans for Mechanical Draft, Ventilating, etc.

**"A Grand Journal"**

"While three score years and ten may be the span of life allotted to man—his period of usefulness drawing at that age to a close—it is not so with *The Mining Journal*. Time has written no wrinkle upon its brow: stronger, brighter, better than ever, and of great good to mining men all over the world."—*Los Angeles Mining Review*.

**The Mining Journal**

46 Queen Victoria Street, London, E.C., England

**THE OLDEST MINING PAPER AND THE PIONEER OF THE TECHNICAL AND TRADE PRESS OF THE WORLD.**

Circulates all over the World, amongst Miners, Metallurgists,  
Engineers, Manufacturers, Capitalists and Investors. . . .

***Published every Saturday - Price 6d.***

**ANNUAL SUBSCRIPTIONS (post free):—United Kingdom, 24s.; Canada, 26s.;  
Rest of the World, 30s., payable in advance.**

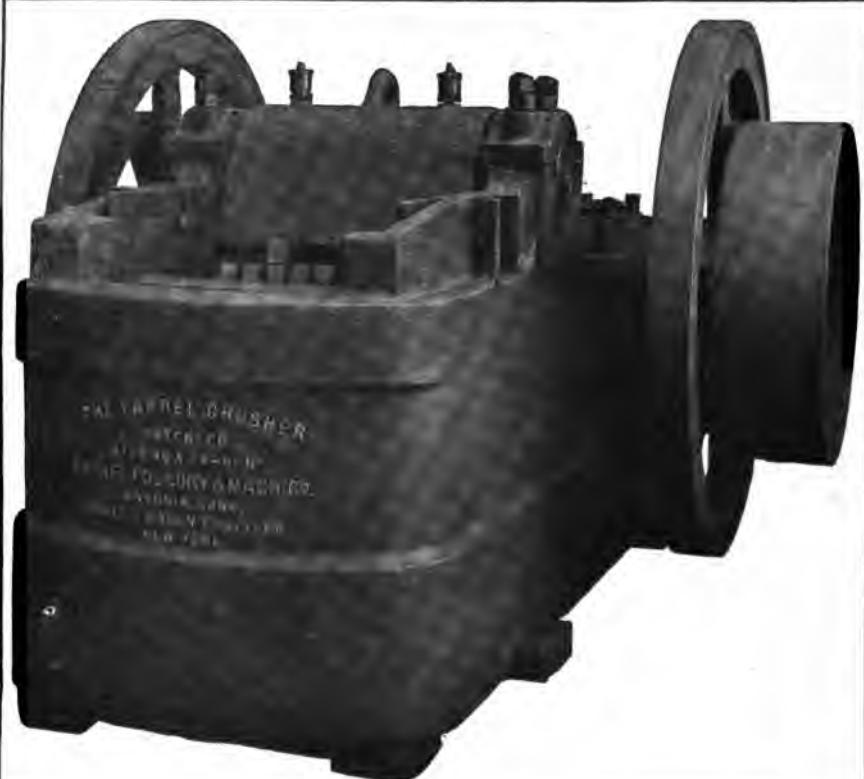

**The Mining Journal** advocates the interests of the Mining and Metallurgical Industries at home and abroad, and has a unique reputation for its Special Correspondence from all the Mining Districts of the World, and also for its Prices Current of Metals, which are bought and sold in all parts of the Globe upon the basis of the "next published *Mining Journal* prices."

**The Mining Journal** was established seventy-five years ago, and still maintains its position as the leading organ of the World's Press devoted to mining and its allied interests.

**The Mining Journal's advertising pages form a complete Buyer's Directory.**

**The Mining Journal** is neither controlled, nor is any interest in it held or exercised by any Mine-owner, Speculator, or Syndicate, nor is it in any way whatever connected with any Stock or Share Dealing Agency.

**The Monitore Bibliografico Tecnico-Scientifico** of Palermo, in its January issue, contains the following above the signature of the Editor:—"The *Mining Journal* To our readers the name of this most important review will not be new, but many perhaps have no better knowledge of it than our summaries afford. I do not say that the perusal of so many abstracts as we publish are sufficient to found a judgment, but they show how great is the intellectual vigour of this paper. The practical importance of the questions treated, the incisive language (the peculiar property of English), the information on the mineral industry of the world, the commercial movement of mineral substances, the technical articles on the more famous mining centres, the notes and articles of unquestionable value on the progress of mineralogical science and its cognates, all deserve recognition in summarising the main features of the most important review with which we have the pleasure of exchanging issues. No other European review, however full, can boast of so many and important correspondents in Australia, America, &c.—In short, to an international chronicle of the industry of the world there is added an intelligent and thoughtful criticism of the art of mining."

# The Commercial Bulletin

BOSTON, MASS.

---

---

For more than fifty years the COMMERCIAL BULLETIN has been recognized as the first commercial authority published in New England. It is the accepted authority of the United States Government on wool.

The Boston Chamber of Commerce and the largest wool houses at home and abroad use the BULLETIN's figures in preference to all others, citing it as the trade authority.

The statistics and prices current of the BULLETIN have been adopted for use for many years past in the reports of the statistical divisions of both the United States Treasury Department and the Department of Agriculture.

They are still used by the United States Department of Commerce and Labor, into which the two divisions just mentioned have been consolidated.

If you are interested in the COPPER METAL MARKETS or in COPPER SHARES or financial and commercial news in general it will pay you to subscribe for

## **MINES AND MINERALS**

A MINING AND METALLURGICAL JOURNAL IS A PAPER FOR

**EVERY MAN WHO MINES**

It treats on all branches of mining. It is a purely mining and metallurgical paper. It is practical. It is well illustrated. It gets the best contributions by paying liberally for them. A year of Mines and Minerals forms a volume of 578 quarto pages of the best and most up-to-date mining literature. No book on mining, of such size, containing such literature, and so well illustrated, can be purchased at any price; and if the same matter were published in book form the book could not be sold for less than \$10.00 or \$12.00 per copy.

The subscription price of MINES and MINERALS is \$2.00 per year to all points in the United States, Mexico or Cuba, \$2.50 to Canada. \$3.00 per year to all other countries.

## THE

# Mining Manual

1909

By WALTER R. SKINNER

**THE STANDARD REFERENCE WORK ON MINES****Price 2ls., Post Free**1,600 pages. In demy 8vo, handsomely bound in **RED Cloth**.

A record of information concerning

**MINING COMPANIES**

(Gold, Diamond, Silver, Copper, Tin, Iron and other Mines, Collieries, Land and Exploration Concerns, etc.)

Arranged in three sections—

**AUSTRALASIAN, AFRICAN, MISCELLANEOUS**Preceded by Tables of Crushings and followed by lists of Mining  
DIRECTORS, SECRETARIES, MINING and CONSULTING ENGINEERS and MINE  
MANAGERSTheir Names, Addresses, and Descriptions, and Names of the Companies with which they are  
connected, and a**DICTIONARY OF MINING AND OTHER TERMS**

The Mining Manual for 1909 contains particulars of over 3,500 Companies arranged in three sections, 450 Companies being AUSTRALASIAN (including Western Australia, Queensland, Broken Hill, Deep Leads, New Zealand, and Tasmania); 1,000 AFRICAN (including Transvaal, Cape Colony, Natal, Rhodesia, West Africa, Egypt); and 2,050 MISCELLANEOUS (including Siberia, Mexico, India, British Columbia, America, etc., and the Coal, Iron, and other mining concerns of the United Kingdom). The particulars given of each Company include the Directors and other officials; date of establishment; seat of operations; description of the property, with the purchase consideration; plant erected or in course of erection; present working results; ore reserves; details of capital: calls; dividends paid; and the financial position as disclosed by the accounts. Highest and lowest prices of the shares for the last four years, also latest price. The three sections extend over 1,100 pages.

Crushing tables and Gold Outputs from the principal mines are given at the commencement of the volume, showing tons treated monthly, results obtained and yield per ton; also annual yields.

The Lists of Directors (7,000), Secretaries (1,750), Mining and Consulting Engineers and Mine Managers (1,300), include their addresses and descriptions and names of the Companies with which they are connected.

A complete Alphabetical Index, containing the names of 5,320 Companies, including many useful items of reference, occupies 43 pages.

**MINING MANUAL, 1909**1,600 pages. In demy 8vo, handsomely bound in **RED Cloth**. Price **2ls.**, post free.

# Mining Literature

**T**HE Engineering Magazine is essential to every mining man, no matter what mining periodicals he may read. The Review and Index in each issue give him an expert digest of all special articles, on every phase of Mining and Mining Engineering which have appeared during the month in the entire Engineering Press of Great Britain, the continent, and the United States—a body of literature which no wide-awake engineer or Mine Manager can afford to ignore, or attempt to master unaided.

The expenditure of hundreds of dollars for subscriptions, and hours of laborious reading of numerous foreign and domestic journals, would not secure what is obtained by a few moments' reading of The Engineering Magazine each month. It is essentially "a busy man's magazine;" and its whole aim and purpose is to keep the reader in close touch with all Engineering and mechanical developments at home and abroad.

# MAPS

We can supply MAPS of  
Any Copper Dis-  
trict of the World

A folding pocket map of the Lake Su-  
perior District, in strong manila covers,  
will be sent to any address for \$2.00

This Map is lithographed in colors on good  
paper, is accurate, well made and thoroughly  
reliable. It shows all active mines of the  
district, and the great majority of the idle  
mines as well, covering the entire Copper  
Mining Belt from Keweenaw Point to the  
Devon Mine, west of the Ontonagon River.

In manila. \$2.00

NEWS BUREAU  
HOUGHTON, Mich., U. S. A.

# **Copper Information Bureau**

**T**HE annual publication of the Copper Handbook necessitates the constant gathering and systematic filing of accurate information regarding the technics and statistics of copper and the copper trade generally, also the securing and filing of data covering the finances, organization, equipment, development, ores, management and prospects of several thousand copper mines and copper mining companies in all parts of the world.

This information is available to any inquirer for a small fee, \$5.00 being the price charged for answering an ordinary inquiry. Where the inquiries involve extended investigation or personal inspection of mines, the price for furnishing full reports will be made according to the time and outlay required.

Special investigations conducted with regard to any branch of the copper industry in the United States and abroad.

Partial or full reports, with personal investigation, made upon any copper mine or prospect in the United States, Canada or Mexico.

# The New Smith Premier Billing Machine

Cut B

Makes out a bill in duplicate or triplicate and, with same operation, records it on loose leaf sales book.

Assures an entry on loose leaf sales book for every invoice made out and makes discrepancies impossible.

Condenses the charges on the sales sheets without loss of space.

Recapitulates and classifies the sales.

Does not soil the sales sheets with the carbon, and by means of its two color device

Writes the credit in red and the body of the page in purple copying or non-fading black ink.

The New Smith Premier Billing Machine adjusts itself to the needs of any office; reducing bookkeeping to its lowest terms, saving time, promoting accuracy and insuring neatness and legibility.

# OKONITE Wires and Cables

Are indispensable in Mining Work. The engineer, electrician and mine manager who carefully considers every detail of his system,—initial expense, elimination of future trouble, maintenance charges, good service—always insists that specifications for electrical work read “all wiring shall be done with OKONITE WIRES AND CABLES.”

Okonite has been under-ground for years in coal, iron and copper mines, carrying without interruption electric currents for Light, Power and Sound. It is everywhere recognized as the standard for rubber insulation.
